## LETTER OF TRANSMITTAL

---

November, 1934.

*To His Excellency, THE HONORABLE FRANK F. MERRIAM,  
Governor of the State of California.*

SIR: I have the honor to herewith transmit Bulletin No. 110 of the Division of Mines, of the Department of Natural Resources, being the annual report of the statistics of the mineral production of California.

The remarkable variety, total valuation, and wide distribution of many of our minerals revealed herein show California's importance as a producer of commercial minerals among the states of the Union.

Respectfully submitted.

GEORGE D. NORDENBOLT,  
Director, Department of Natural Resources.

## INTRODUCTION

---

It is the endeavor of the staff of the State Division of Mines (formerly State Mining Bureau), in these annual reports of the mineral industries of California, to so compile the statistics of production that they will be of actual use to producers and to those interested in the utilization of the mineral products of our State, while at the same time keeping the individual's data confidential. In addition to the mere figures of output, we have included descriptions of the uses and characteristics of many of the materials, as well as a brief mention of their occurrences.

The compilation of accurate and dependable figures is an extremely difficult undertaking, and the State Mineralogist takes the opportunity of here expressing his appreciation of the cooperation of the producers in making this work possible. A fuller appreciation of the value of early responses to the requests sent out in January will result in earlier completion of the manuscript. Statistics lose much of their value if their publication is unnecessarily delayed.

Some of the data relative to properties and uses of many of the minerals herein described are repeated from preceding reports, as it is intended that this annual statistical bulletin shall be somewhat of a compendium of information on California's commercial minerals and their utilization.

WALTER W. BRADLEY,  
State Mineralogist.

# MINERAL INDUSTRY, CALIFORNIA, 1933

---

## DATA COMPILED FROM DIRECT RETURNS FROM PRODUCERS IN ANSWER TO INQUIRIES SENT OUT BY THE CALIFORNIA STATE DIVISION OF MINES, FERRY BUILDING, SAN FRANCISCO, CALIFORNIA

---

### CHAPTER ONE

The total value for the mineral output for California for the year 1933 was \$206,489,058, being an increase of \$7,292,565 over the total of 1932 which was \$199,196,493. There were fifty-five different mineral substances exclusive of a segregation of the various stones grouped under gems; and all the fifty-eight counties of the State contributed to the list.

As revealed by the data following, the salient features of 1933 compared with the previous year were: Practically all of the most important mineral substances showed an increased value, led by gold, cement petroleum, salt, soda, potash, borates, diatomite, lime, barytes, pottery clay, dolomite, silica and silver. Those showing a decreased value were brick and hollow building tile, natural gas, mineral water, copper, lead, and quicksilver. Fluorspar, iodine, molybdenite, and zinc were again included in the list of producers and wollastonite, a new material, was added to our commercial output.

Of the fuels, petroleum showed an increase in value of \$173,725, although there was a decrease in amount from 177,745,286 barrels to 172,139,362 barrels of crude oil. The prices received on the lighter gravity oils were slightly higher than in 1932. Natural gas decreased from 284,168,872 M cu. ft. worth \$16,272,061 to 271,743,544 M cu. ft. worth \$15,403,514.

Of the metals, the gold yield showed an increase from 569,166.99 fine ounces to 613,578.85 fine ounces and in value from \$11,765,726 to \$15,683,075. The gold value for 1933 was calculated at an average weighted price of \$25.56 a fine ounce. Zinc shipments were resumed during the year; silver value increased from \$139,176 to \$140,907 although the amount showed a decrease from 493,533 fine ounces to 402,591 fine ounces. Chromite and tungsten ores also showed increased output and value; copper, lead, and quicksilver decreased in both amount and value from the previous year.

Of the structural materials cement increased from 5,657,549 barrels worth \$7,967,107 to 7,284,031 barrels worth \$10,331,395; magnesite also showed an increased value. Decreases were registered by brick and hollow building tile from a total value of \$1,605,086 to \$1,520,481; miscellaneous stone from a value of \$7,183,643 to \$6,871,581 and granite from \$398,676 to \$183,706. Marble and sandstone also showed decreased values.

Of the industrial materials, increased values were registered by barytes, bentonite, pottery clay, dolomite, gypsum, slate, talc and soapstone, diatomite and pyrite but not enough to offset the decline in mineral water. The total value of the group decreased from \$3,820,711 to \$3,687,195.

Of the salines all materials of the group showed an increased value with the exception of calcium chloride. The group as a whole showed an increased total value from \$6,135,440 to \$8,652,224.

## By Substances.

The following table shows the comparative yield of mineral substances of California for 1932 and 1933, as compiled from the returns received at the State Division of Mines, San Francisco in answer to inquiry sent to producers:

Substance	1932		1933		Increase+ Decrease— Value
	Amount	Value	Amount	Value	
Barytes.....	8,507 tons	\$49,409	8,405 tons	\$49,595	\$186+
Bentonite (fuller's earth)....	4,295 tons	57,670	4,605 tons	60,621	2,951+
Borates.....	179,356 tons	2,856,470	197,495 tons	3,019,513	163,043+
Brick & hollow building tile.....		1,605,086		1,520,481	84,605—
Cement.....	5,657,549 bbls.	7,967,107	7,284,031 bbls.	10,331,395	2,364,288+
Clay (pottery).....	167,284 tons	204,891	141,629 tons	211,711	6,820+
Coal.....	9,508 tons	36,468	2,612 tons	11,367	25,101—
Copper.....	1,417,536 lbs.	89,307	992,515 lbs.	63,521	25,786—
Dolomite.....	35,275 tons	40,956	54,456 tons	176,575	135,619+
Feldspar.....	2,294 tons	15,988	*	*	*—
Gems.....		4,961		690	4,271—
Gold.....	569,167 fine oz.	11,765,726	613,579 fine oz.	15,683,075	3,917,349+
Granite.....		398,676		183,706	214,970—
Gypsum.....	46,867 tons	93,818	59,235 tons	120,451	27,633+
Lead.....	2,418,626 lbs.	72,480	772,463 lbs.	28,583	43,897—
Lime.....	27,510 tons	254,223	33,425 tons	271,619	17,396+
Limestone.....	168,950 tons	487,788	207,371 tons	487,712	76—

Stone, miscellaneous <sup>b</sup> .....		7,183,643		6,871,580	312,062—
Tungsten ore.....	*	*	148 tons	76,605	*+
Zinc.....			290,222 lbs.	12,189	12,189+
Unapportioned.....		2,780,554		44,766,089	1,985,535+
Total value.....		\$199,196,493		\$206,489,058	
Total increase.....					\$7,292,565

\* Included under 'Unappropriated.'

<sup>a</sup> Includes onyx and travertine.

<sup>b</sup> Includes macadam, crushed rock, ballast, rubble, rip rap, sand, gravel.

<sup>c</sup> Includes asbestos, bituminous rock, bromine, calcium chloride, chromite, diatomite, magnesite, magnesium salts, mica, graphite, potash, pyrite, sillimanite-andalusite-cyanite group, slate, sulphur, tungsten, tube-mill pebbles.

<sup>d</sup> Includes bituminous rock, bromine, calcium chloride, carbon dioxide, chromite, diatomite, feldspar, fluor spar, graphite, iodine, magnesite, mica, mineral paint, molybdenum, potash, pyrite, sillimanite-andalusite-cyanite group, sulphur, wollastonite, tube-mill pebbles.

## By Counties.

The following table shows the comparative value of the mineral production of the various counties in the State for the years 1932 and 1933:

<i>County</i>	<i>1932 Value</i>	<i>1933 Value</i>
Alameda	\$1,765,139	\$1,930,111
Alpine	1,995	12,724
Amador	1,400,286	2,028,598
Butte	464,512	404,661
Calaveras	735,199	938,981
Colusa	38,053	8,896
Contra Costa	1,013,993	1,231,971

### Total Mineral Production of California, by Years, Since 1887.

The following tabulation gives the total value of mineral production of California by years since 1887, in which year compilation of such data by the State Mining Bureau (now Division of Mines) began. At the side of these figures have been placed the values of the most important metal and non-metal items—gold and petroleum.

In the same period copper made an important growth beginning with 1897 following the entry of the Shasta County mines, and later Plumas County. Cement increased rapidly from 1902, while crushed rock, sand and gravel as a group paralleled the cement increase. Quicksilver has been up and down. Mineral water and salt have always been

important items, but the values fluctuate. Borax has increased materially since 1896. War-time increases, 1915-1918, were shown by chromite, copper, lead, magnesite, manganese, silver, tungsten and zinc. Most of these have since declined, though silver, structural materials and copper increased in 1920-1924, also lead and magnesite in 1923; lead and zinc in 1925; zinc in 1926, with silver declining; an increase in quicksilver in 1927-1928, with declines in other metals and by petroleum. Natural gas has shown a steady increase since 1907, and since 1928 its value has been second only to petroleum.

## Total Mineral Production of California, by Years, Since 1887

Year	Total value of all minerals	Gold, value	Petroleum, value
1887	\$19,785,868	\$13,588,614	\$1,357,144
1888	19,469,320	12,750,000	1,380,666
1889	16,681,731	11,212,913	368,048
1890	18,039,666	12,309,793	384,200
1891	18,872,413	12,728,869	401,264
1892	18,300,168	12,571,900	561,333
1893	18,811,261	12,422,811	608,092
1894	20,203,294	13,923,281	1,064,521
1895	22,844,663	15,334,317	1,000,235
1896	24,291,398	17,181,562	1,180,793
1897	25,142,441	15,871,401	1,918,269

CHAPTER TWO

FUELS

Among the most important mineral products of California are its fuels. This subdivision includes coal, natural gas, and petroleum, the combined values of which made up practically 77 per cent of the State's entire mineral output for the year 1933.

There are deposits of peat known in several localities in California, small amounts of which are used as a fertilizer, and in stock-food preparations, but none has yet been recorded as utilized for fuel.

Comparison of values during 1932 and 1933 is shown in the following table :

Substance	1932		1933		Increase+ Decrease— Value
	Amount	Value	Amount	Value	
Coal.....	9,508 tons	\$36,468	2,612 tons	\$11,367	\$25,101—
Natural gas.....	284,168,827 M cu.ft.	16,272,061	271,734,544 M cu.ft.	15,403,514	868,547—
Petroleum.....	177,745,286 bbls.	142,890,247	172,139,362 bbls.	143,063,972	173,725+
Total value.....		\$159,198,776		\$158,478,853	
Net decrease.....					\$719,923

COAL

*Bibliography:* State Mineralogist Reports VII, XII–XV (inc.), XVII, XIX–XXVIII (inc.), XXVI. U. S. Geol. Surv., Bulletins 285, 316, 431, 471, 581; Ann. Rept. 22, Pl. III.

Coal produced in California during 1933 totaled 2612 short tons valued at \$11,367, as compared with the 1932 output, which was 9508 tons worth \$36,468. The material mined in 1933 came from a single property in each, Amador, Monterey and Trinity counties. This coal was consumed by the local market and also used on the property for camp purposes, power and forge, to carry on regular operations and development work.

Total Coal Production of California.

The very considerable output of coal in the years previous to 1883 was almost entirely from the Mount Diablo district, Contra Costa County. Later the Tesla mine in Corral Hollow, Alameda County, was an important producer for a few years. Stone Canyon, Monterey County, was also an important producer for a short time, and there has been some coal shipped from properties in Amador, Fresno, Orange, Riverside, Siskiyou and Trinity counties. The following tabulation gives the annual tonnages and values, according to available records:

## Coal Output and Value, by Years

Year	Tons	Value	Year	Tons	Value
1861.....	6,620	\$38,065	1899.....	160,941	\$420,109
1862.....	23,400	134,550	1900.....	176,956	535,531
1863.....	43,200	248,400	1901.....	150,724	401,772
1864.....	50,700	291,525	1902.....	88,460	248,622
1865.....	60,530	348,048	1903.....	93,026	265,383

1898.....	143,045	337,475			
			Totals.....	5,245,398	\$23,296,776

The tonnages in the above table for the years 1861-1886 (incl.) are taken from the U. S. Geological Survey, "Mineral Resources of the U. S., 1910," p. 107. The values assigned for the years previous to 1883 are those given by W. A. Goodyear (Mineral Res., 1882, pp. 93-94), being an average of \$5.75 per ton. From 1887 to date the figures are those of the California State Mining Bureau.

## NATURAL GAS

*Bibliography:* State Mineralogist Reports VII, X, XII, XIII, XIV. XXIX. Bulletins 3, 16, 19, 69, 73, 89. Monthly Summary Oil and Gas Supervisor, Dec., 1919; Aug., 1922; Mar., 1923; Mar. and Apr., 1926.

Statistics on the production of natural gas in California are in a considerable degree difficult to arrive at, as much of it that is utilized directly at the wells for heating, lighting, and driving gas engines is not measured. Hence, it is necessary to approximate the output of many of the operators in the oil fields, estimated on the number of lights, and on the number and horsepower of gas engines and steam boilers thus operated. The figures here given are for gas utilized locally and also that sold for distribution to consumers; and we consider are not overestimated, particularly in the six oil-producing counties. It must be remembered that some of our important oil fields are removed many miles from the site of any other industry, and that the gathering of

small amounts of gas and transporting it for any considerable distance may not always be profitable, nor is it often possible to have pipe-line facilities available to handle the gas accompanying the early gas production in newly developed fields. Wherever feasible, casing-head gas is used in driving gas engines for pumping and drilling, and in firing the boilers of steam-driven plants.

**Actual Production of Natural Gas—How Disposed of in California—1933**

<i>County</i>	<i>M cu. ft. produced</i>	<i>M cu. ft. utilized</i>	<i>M. cu. ft. wasted</i>	<i>M cu. ft. stored</i>
Fresno -----	18,807,454	18,807,454	-----	-----
Kern -----	24,952,023	20,571,398	465,570	3,915,055
Kings -----	107,777,521	104,893,813	2,883,708	-----
Los Angeles -----	73,478,865	70,490,726	1,597,703	1,390,436
Orange -----	18,889,921	13,669,899	5,011,674	208,348
Santa Barbara -----	4,337,847	3,471,759	632,022	234,066
Ventura -----	41,589,136	39,539,382	1,592,882	456,872
Other counties -----	299,113	299,113	-----	-----
Totals -----	290,131,880	271,743,544	12,183,559	6,204,777

**Production and Value.**

There is rather a wide variation in prices quoted for natural gas because a considerable part is used directly in the field for driving gas engines and firing boilers, and is therefore not measured nor sold. Such companies as have placed a valuation on the gas that was thus used in 1933 gave from 2¢ to 43¢ per 1000 cu. ft. at the well. From the totals shown in the tabulation following herein, the average value for all fields in 1933 works out at approximately 5.7¢ per M cu. ft. Approximately 7000 cu. ft. of gas is equal to one barrel of oil in heating value, and is so accounted for by many operators. In driving gas engines, about 4000 cu. ft. per 24 hr, are consumed by a 25-h.p. engine, and 63,700 cu. ft. per day for heating a 70-h.p. steam boiler, which figures have been utilized in compiling this report, in those cases where gas was not metered.

**Utilized Production of Natural Gas in California, 1933**

Fresno -----	18,807,454	\$1,191,237
Kern -----	20,571,398	916,090
Kings -----	104,893,813	5,216,344
Los Angeles -----	70,490,726	4,957,918
Orange -----	13,669,899	912,317
Santa Barbara -----	3,471,759	184,609
Ventura -----	39,539,382	1,957,634
Butte, Humboldt, Lake, Mendocino, Monterey, Sacramento, San Joaquin, San Mateo, Sutter and Tehama*-----	299,113	67,365
Totals -----	271,743,544	\$15,403,514

\* Combined to conceal the output of individual operators in each.

The above totals were a decrease in both quantity and value from those of 1932 output, which was 284,168,872 M cu. ft., valued at \$16,-222,061. Kings County had the largest production as to both amount and value, exceeding Los Angeles County, which led the State for several years. All the counties with the exception of Kings County showed decreased yield of natural gas.

**Natural Gas Production in California Since 1888.**

The production of natural gas in California by years since 1888 is given in the following table. The first economic use of natural gas in

California was from the famous courthouse well at Stockton, bored in 1854-1858. Beginning about 1883 and for several succeeding years, a number of gas wells were brought in around Stockton, and later at Sacramento. Natural gas was known in a number of other localities, and occasionally utilized in a small way, notably at Kelseyville in Lake County, and in Humboldt County near Petrolia and Eureka, but there are no available authentic records of amounts or values previous to the year 1888. The most important developments in the commercial production of natural gas have been coincident with developments in the oil fields, by utilizing the casing-head gas as well as that from dry-gas wells.

Natural Gas Production in California Since 1888

Year	M cubic feet	Value	Year	M cubic feet	Value

▲ Quantity, in part, estimated, where values only were reported.  
b Tabulations previous to 1933 included values of CO<sub>2</sub>, now showing under "Industrial Materials."

Gasoline from Natural Gas.

More or less gas usually accompanies the petroleum in the oil fields, and such gas carries varying amounts of gasoline. A total of 103 plants were in operation in 1933 recovering gasoline by compression or absorption from this 'casing-head' gas. After the gasoline is extracted the remaining 'dry gas' so far as practicable is taken into pipe lines, by which it is distributed to consumers, both domestic and commercial.

A total of 497,350,701 gallons of casing-head gasoline valued at \$24,284,392 was reported made from all fields in California by plants during 1933, compared with 544,698,671 gallons worth \$23,630,291 from 111 plants in 1932. It was distributed as follows:

County	No. plants	Gallons	Value
Fresno .....	1	122,914	\$6,994
Kern .....	16	36,049,400	1,450,439
Kings .....	7	132,247,295	8,138,643
Los Angeles .....	49	219,856,483	9,612,070

The usual recoveries of gasoline from natural gas vary from  $\frac{1}{2}$  gal. to 3 gal. per 1000 cu. ft. of gas handled, the average being about 1 gal. per 1000 cu. ft. The U. S. Bureau of Mines Reports by Knudsen<sup>1</sup> gives the average recovery for 1933 as 1.575 gallons per 1000 cu. ft. of gas treated. His figures show the following production by methods:

	<i>M cu. ft. natural gas treated</i>	<i>Gallons gaso- line recovered</i>	<i>Recovery gal. per M cu. ft.</i>
Oil absorption -----	344,239,570	543,077,957	1.578
Compression -----	1,981,224	2,116,875	1.068

PETROLEUM

*Bibliography:* State Mineralogist Reports IV, VII, X, XII, XIII, XXIX. Bulletins 3, 11, 16, 19, 31, 32, 63, 69, 73, 82, 84, 89. Reports of Oil and Gas Supervisor 1915 to date (issued in monthly chapters since April, 1919, to June, 1929, and quarterly from then on). U. S. Geol. Surv. Bulletins 213, 285, 309, 317, 321, 322, 340, 357, 398, 406, 431, 471, 541, 581, 603, 621, 623, 653, 691. Prof. Papers 116, 117. "American Petroleum; Supply and Demand"; Amer. Petr. Inst., 1925.

The crude petroleum produced in California during 1933 amounted to a total of 172,139,362 barrels, having a value of \$148,063,972 at the well. This was a decrease in quantity with an increased value as compared with the 1932 output, which was 177,745,286 barrels worth \$142,890,247.

This total of quantity is compiled from the monthly production reports filed by the operators with the State Oil and Gas Supervisor.

The question of the value of the crude oil yield at the well is a difficult one to settle with exactitude principally because a large part of the output is not sold until after refining. The large refiners are also large producers of crude oil which they send direct from well to plant, hence much of the crude oil is not sold as such.

The value used in the statistical reports of the State Mining Bureau and the Division of Mines from 1914 to 1927 (inc.) was derived from an average of actual sales of crude oil of all grades in each field of the State and their average applied to the total yield of each respective field. The 1929-1933 values, used by the Division of Mines, were obtained by using the production of crude oil by gravities produced in each field<sup>2</sup> and applying an average of current price quotations for crude oil at the well as compiled by California Oil and Gas Association.

For several years previous to 1919, the State average value per barrel at the well for crude oil as determined by the statistical returns was noted to practically coincide with the quotations during the same years for 23° gravity oil in the San Joaquin Valley fields. In 1919 and since, the average values have worked out at figures corresponding to quotations up to, in one year as high as 28° oil, due to the large yield of high-gravity oils from the new fields in the Los Angeles-Orange counties area.

#### Features of 1933.

Summary of data for the year, as given by the State Oil and Gas Supervisor,<sup>1</sup> is indicated as follows:

#### "PRODUCTION

"The total production in the State for the last six months of 1933 was 88,062,085 barrels of oil and 62,425,318 barrels of water. The production of oil for the year 1933 was, therefore, 172,138,879 barrels, a decrease of 5,606,407 barrels compared with that of 1932. \* \* \*

"The production of oil for the second half of 1933 was 3,985,291 more than for the first half." \* \* \*

<sup>1</sup> Bush, R. D., Resume of the Oil Field Operations in 1932, Summary of Operations—California Oil Fields, Vol. 18, No. 3, January, February, and March, 1932.

These data are compiled by the field offices of the Division of Oil and Gas from the monthly production reports, giving the individual well productions, filed with the State Oil and Gas Supervisor by all producing companies. \* \* \*

"The estimated closed-in production was decreased in 1933 from 235,000 barrels in January to 129,686 barrels in December. The decreased closed-in production represents the output of an average of 765 wells which were restored to production during the year as a result of efforts of the industry to create additional employment." \* \* \*

#### "STORAGE AND PRICE CHANGES

"The total crude and refined petroleum in storage in Pacific Coast territory at the end of 1933 was 155,464,569 barrels according to the American Petroleum Institute. The decrease in storage during the year was 11,781,856 barrels, compared with a decrease of 1,589,524 barrels during 1932. The total amount of crude and refined oil shipped to eastern parts during 1933 was 19,878,000 barrels or 8,055,000 barrels more than 1932 shipments. In March, 1933, prices of all grades of oil were reduced. In the Los Angeles Basin 14 gravity oil was reduced 10 cents per barrel, and 24 gravity oil 9 cents to 24 cents per barrel. In the San Joaquin Valley fields the reductions were 6 cents for 14 gravity oil, and 13 to 16 cents for 24 gravity oil. In June, 1933, prices of most grades of oil were increased. In the Los Angeles Basin 14 gravity oil remained unchanged, but 24 gravity oil was increased 5 to 11 cents per barrel. In the San Joaquin Valley fields the increases were 3 cents for 14 gravity oil and 1 to 10 cents for 24 gravity oil. In September, 1933, prices were again increased in the Los Angeles Basin 10 cents for 14 gravity oil and 8 to 16 cents for 24 gravity oil. In the San Joaquin Valley the increases were 5 cents for 14 gravity oil and 9 to 14 cents for 24 gravity oil.

#### "DRILLING AND DEVELOPMENT

"During 1933, 279 wells were reported to the State Oil and Gas Supervisor as ready to drill as compared with 279 wells in 1932. The most important event in 1933 was the discovery and development of the portion of the Huntington Beach field lying under the tidelands and belonging to the State. This was discovered and developed by directional drilling of slanting holes. Operators, after some preliminary litigation with the State, concluded agreements for the payment of royalty. Deeper zones were discovered in the Montebello and Mt. Poso fields, and substantial production was developed in the Mountain View district in Kern County."

#### TOTAL PETROLEUM PRODUCTION OF CALIFORNIA

The presence of oil seepages and springs in Los Angeles and Ventura counties was known and utilized in a small way early in the history of California. Some also was shipped to refineries at San Francisco from Santa Barbara and Humboldt counties. In the light of present-day developments, the following reference to the previous year's production of oil and its future prospects as expressed by the San Francisco Bulletin of January 8, 1866, is strikingly prophetic even though skeptical:

"It is possible that the small quantity received (40,000 or 50,000 gallons in 1865) may be the forerunner of many millions which will, at some future time, lubricate the wheels of commerce and set a trade at work excelling in variety any that has thus far been known on this coast. At present, however, we admit to being a little skeptical about the assumption of the astute Professor Silliman that California will be found to have more oil in its soil than all the whales in the Pacific Ocean."

According to Hanks,<sup>1</sup> in 1874 production amounted to 36 bbl. per day from natural flows in Pico Cañon (Newhall), and at Sulphur Mountain (Ventura County), the oil being of 32° gravity average.

"Work was commenced in Pico Canyon in 1875 by drilling three shallow wells with spring pole, all of which yielded oil at depths of from 90 to 250 feet. Actual work of development commenced with steam machinery in 1877."<sup>2</sup>

In 1877 Pico averaged 40-50 bbl. daily, and Ventura 80 bbl. daily. In 1878, there was some production (at 60 bbl. per day, for a time) from wells in Moody Gulch, near Los Gatos, Santa Clara County, the oil being of 46° Baumé.

The first wells in the Coalinga, Fresno County, and Summerland, Santa Barbara County, fields were drilled in 1890, but Coalinga did not make its influence felt conspicuously on the state's annual output until 1903. The Summerland yield never has been large. The Salt Lake

<sup>1</sup> Hanks, Henry G., Report IV of State Mineralogist, p. 298, 1884.

<sup>2</sup> *Idem*, p. 301.

field near Los Angeles began production in 1894 and in 1897 reached over a million barrels annually.

In the Kern County fields, the first well was drilled in Sunset in 1891, Midway in 1900, McKittrick in 1892, Kern River in 1899. The Sunset-Midway district attained a yield of over 4,000,000 bbl. in 1909, and over 20,000,000 bbl. in 1910. Kern River field produced over 3,000,000 bbl. in 1901.

The first well in the Santa Maria-Lompoc group, Santa Barbara County, was drilled in 1901, and the district advanced to a yield of over 3,000,000 bbl. annually in 1905.

The Whittier-Fullerton field in Los Angeles and Orange counties became an important factor in 1902. The Montebello field, Los Angeles

Conejo Oil Field, Ventura County. Shallow wells (100 ft. to 300 ft.) pumped by jacks and cables.

*Photo by Walter W. Bradley.*

County, was the conspicuous addition in 1918-1919; and Elk Hills, Kern County, with Huntington Beach and Richfield, Orange County, in 1920. In 1921, the new fields added were Long Beach and Santa Fe Springs, Los Angeles County; in 1922, Torrance field in Los Angeles County, and Wheeler Ridge field in Kern County; but the production from the large number of new wells started in these new Los Angeles County fields did not reach its peak until August and September, 1923. Dominguez (Compton) came in during 1923; followed by Rosecrans and Inglewood in 1924. Ventura recorded important additions to its producing area in 1925 and 1926. Seal Beach, Orange County, and Mt. Poso, Kern County, were the new fields added in 1926; Round Mountain, Kern County, and Rincon, Ventura County, were the new

fields added in 1927; with Potrero in Los Angeles County, Elwood in Santa Barbara County and Kettleman Hills in Kings County in 1928.

During 1929 Playa Del Rey was added to the oil fields in Los Angeles County.

The effect of the advent of these various fields to the producing column will be noted in the tabulation herewith, by years:

**TABLE C**  
Total Petroleum Production in California

**Specific Gravity of Oils Produced.**

The proportion of heavy and light oil produced in the various fields is shown in Table E, following, for which we are indebted to the Standard Oil Company. Specific gravities in California range from 8° Baumé in the Casmalia field, Santa Barbara County, to 60° in Kettleman Hills, Kings County.

California crude oils are all essentially of asphalt base, with a few notable exceptions. In the following localities are wells yielding crudes containing both asphalt and paraffine constituents: Oil City field, Coalinga; a few deep wells in East Side field, Coalinga; a considerable part of the Ventura County field; Western Minerals area, south of Maricopa; Wheeler Ridge, Kern County.

**TABLE E**

**Operating Data.**

The following tabulation (Table F) is compiled from data published by the State Division of Oil and Gas,<sup>1</sup> semiannually, and here combined to show the entire year's operations for all fields. The districts are the geographical subdivisions as administered by that Division, and which are outlined on the accompanying map.

<sup>1</sup> Summary of Operations—California Oil Fields; Division of Oil and Gas, Fifteenth Annual Report of State Oil and Gas Supervisor, Vol. 19, No. 1, July, Aug., Sept., 1933, and No. 3, Jan., Feb., March, 1934.

It will be noted that the State average yield of oil per-well-per-day was 57.2 barrels for the first six months of 1933 and 56.2 barrels for the second. This is somewhat higher than the figure 46.8 barrels average for December derived from American Petroleum Institute data as shown in Table D, on a previous page, due in part at least, to the fact that the latter is on a full-time basis, whereas the Division's figures allow for shut-down time.

TABLE F. Production Statistics and Operating Data of California Oil Fields—1933

Field	January 1 to June 30					July 1 to December 31						
	Average number of producing wells—actual	Oil ( bbls.)	Number of days producing	Production per well per day (bbls.) <sup>1</sup> Includes wells capable of production which were shut down on account of overproduction.

<sup>2</sup> Estimated.

<sup>3</sup> Gas wells omitted from totals.

<sup>4</sup> One well producing a total of 49 days.

<sup>5</sup> Two wells producing a total of 48 days.

<sup>6</sup> Three wells producing a total of 307 days.

<sup>7</sup> Gas wells omitted from totals.

<sup>8</sup> Two wells producing a total of 48 days.

<sup>9</sup> Two wells producing a total of 160 days.

## CHAPTER THREE

## METALS

*Bibliography:* Reports of State Mineralogist I-XXX (inc.). Bulletins 5, 6, 18, 23, 27, 36, 50, 57, 76, 78, 85, 92, 95. Spurr and Wormser, "Marketing of Metals and Minerals." See also under each metal.

The total value of metals produced in California during 1933 was \$16,256,317. Chief among these is and always has been gold; followed by quicksilver, silver, copper, lead, tungsten, and platinum.

A comparison of the 1933 output with that of the 1932 is afforded by the following table:

Substance	1932		1933		Increase+ Decrease- Value
	Amount	Value	Amount	Value	
Copper.....	1,417,536 lbs.	\$89,307	997,511 lbs.	\$63,521	\$25,786-
Gold.....	569,167 fine oz.	11,765,726	613,579 fine oz.	15,683,075	3,917,349+
Lead.....	2,418,626 lbs.	72,480	772,463 lbs.	28,583	43,897-
Platinum metals.....	336 oz.	8,142	237 oz.	7,255	887-
Quicksilver.....	5,349 flasks	279,780	4,102 flasks	229,472	50,308-
Silver.....	493,535 fine oz.	139,176	402,591 fine oz.	140,907	1,731+
Tungsten.....	*	*	148 tons	76,605	* +
Zinc.....			209,222 tons	12,189	12,189+
Unapportioned.....		\$9,509		\$14,710	5,201+
Total value.....		\$12,364,120		\$16,256,317	
Net increase.....					\$3,892,197

\* Included under 'Unapportioned.'

• Includes iron, manganese, tungsten.

• Includes chromite and molybdenum.

## ALUMINUM

*Bibliography:* Report XVIII, p. 198. Bulletins 38, 67. U. S. Geol. Surv., Min. Res. of U. S.

To date there has been no commercial production of aluminum ore in California. Only a single authenticated occurrence of bauxite has thus far been noted in this State, being in Riverside County, southeast of Corona, but as yet undeveloped.

## ANTIMONY

*Bibliography:* State Mineralogist Reports VIII, X, XII-XV (inc.), XVII, XXII, XXIII, XXV-XXVII (inc.). Bulletins 38, 91.

During 1933 there were no shipments of antimony ore in California. The principal commercial production of antimony in California has come from Kern, Inyo and San Benito counties, and other occurrences have been noted in Nevada, Riverside, San Bernardino and Santa Clara counties. The commonest occurrence is in the form of the sulphide,

stibnite; but in the Kernville and Havilah districts in Kern County there were notable deposits of the native metal, being among the few localities of the world where native antimony has been found.

Present New York quotations (Oct. 25, 1934) are around 9.64¢ @ per pound for Chinese (duty paid) and American spot antimony.

Antimony Production in California, by Years.

The production of antimony ore in California by years since 1887 has been as follows:

Year	Tons	Value	Year	Tons	Value
1887-----	75	\$15,500	1902-----

\* Annual details concealed under 'Unapportioned.'

ARSENIC

*Bibliography:* Reports XVIII, XXIII, XXV. Bulletin 67. U. S. G. S., Min. Res. of U. S.

Arsenic is found in a number of localities in California in the mineral arsenopyrite (FeAsS), which is frequently gold bearing; and in scorodite (FeAsO<sub>4</sub>+2H<sub>2</sub>O), an oxidation product of arsenopyrite. The occurrence of realgar (AsS) has also been noted.

Except for a small output in 1924, there has been no commercial recovery of arsenic from California ores. There having been only a single operator, the figures are concealed under the 'Unapportioned' item.

BERYLLIUM

*Bibliography:* State Mineralogist Report XXVII. Eng. & Min. Jour.-Press, Vol. 118, No. 8, p. 285, Aug. 23, 1924. U. S. Bureau of Mines Information Circular 6190.

Beryllium is a metal resembling aluminum closely in its chemical character. It has a specific gravity of 1.85, is almost as hard as quartz (will scratch glass) and will take a high polish. The use of beryllium as a metal is still more or less in the experimental stage because the cost of extracting the metal from its ores almost makes it prohibitive and the present sources of supply of the ore are limited. Not until such a time when deposits can be found that will assure a definite supply and metallurgical costs are such as to justify its use, will the metal be found in common use.

There are a number of beryllium minerals, but none have been found in commercial quantities, except beryl, which is a beryllium-aluminum silicate. The chief use at present for ground beryl is as an addition to porcelain products, where it reduces the coefficient of expansion. Beryllium metal is difficult to separate from aluminum.

Beryl occurs in California in the pegmatite dikes of the tourmaline gem district in northern San Diego and southwestern Riverside counties; and an occurrence has recently been noted in western Inyo County, but the quantity is as yet unproved. Thus far there have been no commercial shipments of beryl from California except for gem purposes (the pink and aquamarine varieties).

### BISMUTH

*Bibliography:* Bulletins 38, 67, 91. Am. Jour. Sci., 1903, Vol. 16.

Several bismuth minerals have been found in California, notably native bismuth and bismite (the ochre) in the tourmaline gem district in San Diego and Riverside counties near Pala. Other occurrences of bismuth minerals, including the sulphide, bismuthinite, have been noted in Inyo, Fresno, Nevada, Tuolumne, San Bernardino, and Mono counties, but only in small quantities. The only commercial production recorded was 20 tons valued at \$2,400 in 1904, and credited to Riverside County.

Present quotations for bismuth are around \$1.05 per pound, in ton lots for the refined metal.

### CADMIUM

*Bibliography:* U. S. Geol. Surv., Min. Res. of U. S., 1908, 1918.

During 1917 and 1918, cadmium metal was recovered by the electrolytic zinc plant of the Mammoth Copper Company in Shasta County. It was shipped in the form of 'sticks' and amounted to a total of several thousand pounds for the two years, the exact figures being concealed under 'Unapportioned.' That was the first, and thus far the only, commercial production of cadmium recorded from Californian ore. Cadmium occurs there associated with zinc sulphide, sphalerite. Cadmium also occurs in the Cerro Gordo Mines, Inyo County, associated with smithsonite (zinc carbonate).

Present quotations for cadmium are 55¢ per pound for the refined metal.

### CHROMITE

*Bibliography:* State Mineralogist Reports IV, XII, XIII, XIV, XV, XVII, XVIII, XXI-XXIX (inc.). Bulletins 38, 76, 91. Preliminary Report 3. U. S. G. S., Bull. 430. Min. & Sci. Press, Vol. 114, p. 552.

During the years 1932 and 1933 there were shipments of chromite in California amounting to 1206 short tons running 45%  $\text{Cr}_2\text{O}_3$  worth \$16,587. The annual details are combined under the 'Unapportioned' item to conceal the output of a single producer in 1932. The 1933 shipments were the largest in volume since 1920, and a marked increase in both amount and value over the 1932 output.

#### Occurrence.

Chromite is widely distributed in California, the principal production, thus far, having come from El Dorado, San Luis Obispo, Del Norte, Shasta, Siskiyou, Placer, Fresno, and Tuolumne counties. In

1918 a total of 29 counties contributed to the State's output. There are two main belts in California yielding this mineral, one along the Coast Ranges from San Luis Obispo County to the Oregon line, including the Klamath Mountains at the north end, and the other in the Sierra Nevada from Tulare County to Plumas County. Chromite occurs as lenses in basic igneous rocks such as peridotite and pyroxenite, and in serpentines which have been derived by alteration of such basic rocks.

#### Imports.

Imports of foreign chromite<sup>1</sup> duty free, mainly from Rhodesia, New Caledonia and India, totaled 116,511 long tons valued at \$1,426,450 for the year 1933, compared with 89,143 tons worth \$1,625,733 in 1932.

#### Total Chromite Production of California.

Production of chromite in California began, apparently, about 1874, principally in San Luis Obispo County. There was considerable activity from 1880 to 1883, inclusive, and a total of 23,238 long tons (or 26,028 short tons), valued at \$329,924, was shipped from that county up to the beginning of 1887. Some ore also was shipped from the Tyson properties in Del Norte County. The tabulation herewith shows the output of chromite in California, annually, including the earliest figures so far as they are available. The figures from 1887 to date are from the records of the State Mining Bureau:

Total Chromite Production of California

Year	Tons	Value	Year	Tons	Value
1874-1876 (San Luis Obispo County).....	26,028	\$329,924	1911.....	935	\$14,197

<sup>1</sup> Monthly Summary of Foreign Commerce of U. S. Bureau of Foreign and Domestic Commerce, Part 1, Dec., 1933.

## COBALT

*Bibliography:* Report XIV. Bulletins 67, 91. U. S. G. S., Min. Res. of U. S., 1912, 1918. U. S. B. M., I. C. 6331.

Occurrences of some of the cobalt minerals have been noted in several localities in California, but to date no commercial production has resulted. Some of the copper ores of the foothill copper belt in Mariposa and Madera counties have been found to contain cobalt up to 3%.

The nominal quotation for cobalt is around \$2.50 per pound for the refined metal—35% for cash.

## COPPER

*Bibliography:* State Mineralogist Reports VIII–XXIX (inc.). Bulletins 23, 50, 91.

The output of copper in California during 1933 amounted to a total of 1,992,515 pounds of recoverable metal valued at \$63,521. This was a decrease in both quantity and value as compared with the 1932 production which was 1,427,536 pounds worth \$89,307. The average price of copper in 1933 was 6.4¢ per pound compared with 6.3¢ in 1932, 9.1¢ in 1931, 13.0¢ in 1930, 17.6¢ in 1929 and 14.4¢ in 1928.

Copper has been second to gold among the metals in California since 1896 until 1932, when it was passed in value of output by both quicksilver and silver, and 1933 also by tungsten.

The distribution of the 1933 output in California by counties was as follows:

<i>County</i>	<i>Pounds</i>	<i>Value</i>
Amador -----	13,922	\$891
Butte -----	1,133	73
Calaveras -----	2,248	144
El Dorado -----	2,755	176
Inyo -----	7,940	508
Nevada -----	67,179	4,299
San Bernardino -----	7,871	504
Santa Barbara -----	27,998	1,792
Shasta -----	855,108	54,727
Alpine, Humboldt, Kern, Lassen, Los Angeles, Madera, Mariposa, Mono, Placer, Plumas, Riverside, Sacramento, Sierra and Yuba*	6,361	407
Totals -----	992,515	\$63,521

\* Combined to conceal the output of individual operators in each.

## Copper Production of the United States.

According to preliminary data issued by the U. S. Bureau of Mines<sup>1</sup> the smelter production of primary copper from domestic sources during 1933 amounted to 499,999,143 pounds, a decrease of approximately 17 per cent compared with 1932 output. The value decreased approximately 16 per cent in 1933. The average price of copper delivered during the year, as reported to the U. S. Bureau of Mines by selling agents, was 6.4¢ per pound.

<sup>1</sup> U. S. Bureau of Mines, Mineral Market Report, M. M. S. 292, June 13, 1934.

Copper Production of California, by Years.

Although some mining of copper ores in a small way had been done earlier, shipments in appreciable quantities began in 1861 and continued of importance up to the end of 1867, when a total of 68,631 tons (of 2376 pounds) of high-grade ores, and 847 tons of matte or ‘regulus’<sup>1</sup> had been shipped to smelters at New York, Boston, and Swansea, Wales. The most important district at that time was Copperopolis and vicinity in Calaveras County, with some shipments also made from Mariposa, El Dorado, Fresno and San Luis Obispo counties. From 1868 to 1882, the output was insignificant. There are wide discrepancies in the figures currently recorded for copper production previous to 1882, in which year the data of the U. S. Geological Survey began. The detailed statistics of the California State Mining Bureau began in the year 1894. Amount and value of copper production in California annually since 1882 is given in the following tabulation:

Copper Production of California, by Years

Year	Pounds	Value	Year	Pounds	Value
1882.....	826,695	\$144,672	1909.....	65,727,736	\$8,478,142
1883.....	1,600,862	265,743	1910.....	53,721,032	6,680,641

GOLD

*Bibliography:* State Mineralogist Reports I to XXX (inc.), (except III and VIII). Bulletins 36, 45, 57, 91, 92, 95. U. S. Geol. Surv., Prof. Paper 73. U. S. Bur. of Mines, Econ. Paper 3 (1929).

Gold was first, and, for many years, the most important single mineral product of California. Although now surpassed for a number of years in annual value by petroleum, and by natural gas beginning with 1923 to 1932, it still heads our metal list, and California continues to outrank all the other gold-producing States of the United States, including Alaska. In fact, at present, California is producing approximately 24% of the gold mined in the entire United States.

BENEFIT FROM  
MINING ACTIVITY

The map displays the state of California with its county boundaries and names. Major cities are marked with dots. A scale bar at the top right indicates distances from 0 to 100 miles. A circular inset highlights the San Bernardino area, which is labeled as a gold producing district. The map also shows the surrounding states of Oregon, Nevada, and Arizona, and the Gulf of California to the south.

M E X I C O

ating in the State, most of whom were people who could not find employment in other lines. There was no premium paid on gold during 1932, the price being \$20.67 a fine ounce. On August 29, 1933, there was an executive order lifting the embargo on gold ores, concentrates, precipitates, and unretorted amalgam, followed on October 25, 1933, by another order instructing the Reconstruction Finance Corporation to buy newly-mined gold at a price fixed by the U. S. Treasurer

which corresponds to the world price, all of which had an effect on the 1933 gold yield. On January 30, 1934, the Gold Reserve Act of 1934 was passed, followed by the President's proclamation of January 31, 1934, which fixed the weight of the gold dollar at 15 5/21 grains, nine-tenths fine. The value of gold thereby became \$35 a fine ounce.

The production of gold in California during 1933 totaled 631,578.85 fine ounces worth \$15,683,075, being an increase of 44,411.86 fine ounces over the 1932 yield. The deep or lode mines accounted for 351,199.99 fine ounces worth \$9,002,232 and the placers (mainly dredges) produced 261,378.86 fine ounces worth \$6,680,843.

As the Division of Mines has never independently gathered the statistics of gold and silver production, these figures, as in former years, are published by cooperation with and through the courtesy of F. W. Horton and H. M. Gaylord of the Division of Mineral Statistics, U. S. Bureau of Mines.

The largest production for 1933 was reported from Nevada County with an output of 182,956.10 fine ounces (\$4,676,357); Sacramento County second with 117,240.56 fine ounces (\$2,996,669); Amador County third with 76,105.68 fine ounces (\$1,945,261); Yuba County fourth with 43,734.11 fine ounces (\$1,117,844); followed in turn by Shasta, El Dorado, Merced, Sierra, Calaveras and Kern counties.

Nevada held the first place as a gold producing county with an output exceeding that of Yuba or Amador which held first and second places respectively in 1928 with Sacramento fourth that year. Sacramento held second place since 1931, its output exceeding that of Amador, which held second place in 1930. The gold from Yuba and Sacramento comes almost entirely from dredges, while that from Nevada and Amador counties comes mainly from the lode mines.

Distribution of the 1933 gold output by counties was as follows:

County	Number of operators <sup>a</sup>		Value
	Placer	Lode	
Alpine	---	1	\$1,651
Amador	74	46	1,945,261
Butte	80	16	296,159

Yuba	36	9	1,117,844
Totals	993	797	\$15,683,075

<sup>a</sup> Number does not include snipers, prospectors and various individuals selling small lots to bullion dealers.

The following is quoted from the advanced statement of gold in 1933 by courtesy of the U. S. Bureau of Mines,<sup>b</sup> Department of Commerce:

"In 1933, the higher price of gold caused a notable expansion in mining operations in California and resulted in an augmented gold production. The number of producing lode mines increased from 718 in 1932 to 797 in 1933, a gain of 11 per cent, and the number of placer operations increased from 828 to 993 or 20 per cent. The output of lode gold advanced 13,563 ounces or 4 per cent and that of placers 30,849 ounces or 13 per cent. Lode gold supplied 57 per cent of the total output and placer gold 43 per cent. Nevada and Sacramento counties each produced more than 100,000 ounces of gold in 1933 and were followed in output by Amador, Yuba and Shasta counties in the order given. These five counties produced an aggregate of 444,226 ounces or over 72 per cent of the total gold production in 1933. The five Mother-Lode counties, Amador, Calaveras, El Dorado, Mariposa, and Tuolumne, contributed 128,778 ounces or 21 per cent of the output. The Grass Valley-Nevada City, Folsom, and Mother-Lode districts, in order of their output, each produced over 100,000 ounces of gold in 1933 and yielded an aggregate of 397,859 ounces or 65 per cent of the State total.

"In 1933, dry gold ore yielded over 99 per cent of the gold recovered from lode mines. Amalgamation accounted for 72 per cent of the total output of lode gold, smelting of concentrates 15 per cent, cyanidation 11 per cent, and smelting of ore 2 per cent. The largest producers of gold in California in 1933, in order of output, were Empire Star Mines Co., Ltd., Grass Valley-Nevada City district; Natomas Co., Folsom district; Yuba Consolidated Goldfields, Yuba and Snelling districts; Idaho-Maryland Mines Co., Grass Valley-Nevada City district; Capital Dredging Co., Folsom district; the Argonaut Mining Co., Jackson district; Mountain Copper Co., Ltd., Iron Mountain district; Kennedy Mining & Milling Co., Jackson district; Central Eureka,

<sup>b</sup> U. S. Bureau of Mines, advanced statement for 1933, Mineral Yearbook 1933-34, pp. 151-153.

Sutter Creek district; and Original Sixteen to One Mine, Alleghany district. These 10 companies produced 406,788 ounces or more than two-thirds of the total output.

"Of the placer production 77 per cent was supplied by 16 companies working 25 dredges. These dredges recovered 201,710 ounces of gold from 55,331,000 cubic yards of gravel, an average yield of 0.0036 ounce per cubic yard as compared with a recovery of 0.0039 ounce per cubic yard to 1932."

"The following 20 mines or companies, virtually all of which were old, established producers, yielded 301,411 fine ounces of lode gold, or slightly more than half of

The ladies also do their part in panning operations—a Fresno County scene.

the total gold output of the State: Empire Star Mines Co., Ltd., Idaho Maryland Mines Co., Great Northern Gold Mines, Inc. (Hoge), and Golden Center Mine, all in Nevada County; Argonaut Mining Co., Ltd., Kennedy Mining & Milling Co., Central Eureka Mining Co., and Pioneer Lucky Strike Gold Mining Co., all in Amador County; The Mountain Copper Co., Ltd., Shasta County; Original Sixteen to One Mine, Inc., Sierra County; Middle Fork Gold Mining Co. (Sliger); Montezuma-Apex Mining Co., and Beebe Gold Mining Co., El Dorado County; Yellow Aster and King Solomon, Kern County; Carson Hill and Royal, Calaveras County; King Solomon Mines Co., Siskiyou County; and Pacific Mining Co. (Pine Tree and Josephine) and Diltz, Mariposa County. On account of the appreciation in the price of gold much marginal ore was transformed into payable or reserves which in many instances were further increased by active development work.

"The production of gold by dredging was 201,710 fine ounces—approximately one-third the gold output of the State and 12,869 ounces more than the dredge output in 1932. The Natomas Co. with 6 dredges and the Capital Dredging Co. with 3 dredges in the Folsom district, Sacramento County, and the Yuba Consolidated Gold Fields with 3 dredges at Hammonton, Yuba County, and 1 in Merced County were the largest operators and made a combined output of over three-fourths of the total dredge production. The 13 dredges of these companies handled 41,917,000 cubic yards of gravel, an average of 3,224,400 cubic yards apiece. Each of the following companies operated a single dredge: The Lancha Plana Gold Dredging Co. at Camanche, Amador County; Shasta Butte Gold Dredging Co., Oroville, Butte County; Allen Placer, Burson, Calaveras County;

Canyon Creek Dredging Co., Georgetown, El Dorado County; Snelling Gold Dredging Co., Snelling, Merced County; Gold Hill Dredging Co. in the Willow Hill district, 2 miles southeast of Folsom, Sacramento County; Crow Creek dredge at Cottonwood, Shasta County; Cal Oro Dredging Co. on Greenhorn Creek, Yreka, Siskiyou County; La Grange Gold Dredging Co., La Grange, Stanislaus County; Gold Bar Dredging Co. and Trinity Dredging Co., both at Lewiston, Trinity County.

"The 14 companies named operated a total of 24 dredges which handled 55,296,890 cubic yards of gravel and made an average recovery of 0.0036 ounce of fine gold per cubic yard.

"The Natomas Co. had a most successful year. Its dredges recovered 69,425 ounces of fine gold from 18,290,841 cubic yards of ground with a gross return of \$0.0981 per cubic yard. The quantity of gravel washed increased 1,999,143 yards and the gross yield \$0.0185 per yard over 1932. Costs per yard were reduced about 3 per cent to \$0.0459 per yard. A new dredging area estimated to contain about 52,000,000 cubic yards of profitable ground was developed in prospecting, and the company authorized the construction of a 16-cubic-foot dredge, designed to dig 40 feet below the water line, to bring this area into production.

"The Yuba Consolidated Gold Fields began construction of a new dredge west of Hammonton, which will have a large capacity and will be capable of digging to a greater depth than any of the company's other dredges. Part of the equipment of the new dredge was obtained by dismantling one that had worked out its ground on the north side of the Yuba River. This corporation reported acquisition of one new dredging property and the possibility of further extending its operations on the Yuba River. The Lancha Plana Gold Dredging Co. handled about 3,000 cubic yards of gravel a day at its properties on the Mokelumne River, 17 miles westerly from

Undercurrent at the Salyer Hydraulic Mine in Trinity County.

*Cut by Courtesy of Engineering and Mining Journal.*

San Andreas. Twelve men were employed. The Gold Hill Dredging Co. started mining April 1, with a dredge moved from near Dayton, Nev. The Gold Bar Dredging Co. rebuilt its dredge damaged by fire and recommenced mining in June.

"The large increase in the price of gold, if maintained, will notably extend the areas that may be mined profitably and thus add many years to the life of the gold-dredging industry in the State.

"The output of drift placers was relatively unimportant compared with the total gold output of the State. The five largest producing mines, in order of output, were the Calaveras Central at Angels Camp, Calaveras County; Gray Wing Extension at Folsom, Sacramento County; Vallecito-Western 3 miles east of Angels Camp, Calaveras County, operated by the Tonopah Belmont Development Co.; Cohen-Gooday on the West Branch of Feather River in Butte County, operated by the Genii Consolidated Mines Co., Ltd.; and the New Era at Oroville, Butte County. These five mines produced a total of 7,829 fine ounces of gold.

"The production of gold from hydraulic operations in California is surrounded by so many restrictions as to tailings disposal that it constituted less than 1 per cent of the State's total output in 1933. Trinity, Siskiyou, and Sierra counties, in the order named, were the leading producers of placer gold by hydraulicking and yielded over half the output. The Redding Creek placers 7 miles from Douglas City, Buckeye Placer Mines, Inc., Carrville, Red Hill mine on the Trinity River  $3\frac{1}{2}$  miles from

Junction City, Osborne Hill mine 1 mile southwest of Helena, all in Trinity County; and the Depot Hill mine, 5 miles northeast of Camptonville, Sierra County, were the five largest producers by hydraulicking and yielded a total of 2,037 fine ounces of gold.

"One hundred and seven bullion dealers in California, including banks, merchants, and private refiners licensed by the State Mineralogist of California under the Ore Buyers License Act, commonly known as the 'High-Grade Bill,' sold approximately 42,600 fine ounces of gold (7 per cent of the estimated total State production) to the San Francisco mint and other refiners. The major part of this gold was derived from small-scale placer operations and some from pocket hunting. Most of the placer gold purchased by licensed bullion buyers came from the Cosumnes River in Eldorado and Amador counties; the Feather River and its tributaries and Big

Butte Creek in Butte and Plumas counties; Mokelumne River in Amador and Calaveras counties; Big Canyon and Weber Creeks in Eldorado County; the Yuba River and Deer Creek in Nevada County; North, South, and Middle Forks of the American River and Buckeye, Blue Canyon, and Indian Creeks in Placer County; Black Hawk, Nelson, Rush, Sloat, Spanish, and Squirrel Creeks in Plumas County; Klamath and Salmon Rivers and their tributaries in Siskiyou County; the Sacramento River and its tributaries, Beegum, Clear, and Cottonwood Creeks, and French Gulch in Shasta County; Trinity River and its tributaries in Trinity County; and Stanislaus and Tuolumne Rivers and Bull and Woods Creeks in Tuolumne County. Some of the gold purchased was recovered from the beach sands in Santa Cruz, Monterey, and Humboldt counties, and small quantities were derived from San Gabriel and San Francisquito Canyons in Los Angeles County. Bullion buyers in Fresno, Humboldt, Kern, and San Bernardino counties reported minor purchases."

**Total Gold Production of California.**

The presence of gold in stream gravels near Los Angeles was known and worked in a small way by the Indians, at least as early as 1841,<sup>1</sup> and possibly 1820.<sup>2</sup> On March 2, 1844, Don Manuel Castanares, deputy for California to the Congress of Mexico, reported<sup>3</sup> to his government that placers near Los Angeles had produced up to December, 1843, a total of 2000 ounces of gold dust, most of which had been sent to the United States Mint at Philadelphia.

As the padres and the rancheros discouraged the quest of gold, this early, small production caused no particular excitement. It was not until James W. Marshall's finding of gold nuggets in the tail-race of Sutter's saw mill on the American River, January 24, 1848, was heralded abroad that the great rush began, and California became a commonwealth of first rank almost over night. There are, however, no authentic data on gold production prior to 1848, other than occasional, scattered references such as above quoted.

The following table was originally compiled by Chas. G. Yale, of the Division of Mineral Resources, U. S. Geological Survey, but for a number of years statistician of the California State Mining Bureau and the U. S. Mint at San Francisco. The authorities chosen for certain periods were: J. D. Whitney, state geologist of California; John Arthur Phillips, author of "Mining and Metallurgy of Gold and Silver" (1867); U. S. Mining Commissioner R. W. Raymond; U. S. Mining Commissioner J. Ross Browne; Wm. P. Blake, Commissioner from California to the Paris Exposition, where he made a report on "Precious Metals" (1867); John J. Valentine, author for many years of the annual report on precious metals published by Wells, Fargo & Company's Express; and Louis A. Garnett, in the early days manager of the San Francisco refinery, where records of gold receipts and shipments were kept. Mr. Yale obtained other data from the reports of the director of the U. S. Mint and the director of the U. S. Geological Survey. The authorities referred to who were alive at the time of the original compilation of this table in 1894 were all consulted in person or by letter by Mr. Yale with reference to the correctness of their published data, and the final table quoted was then made up.

The figures for 1903-1923 (inclusive) are those prepared by the U. S. Geological Survey; and since by the U. S. Bureau of Mines:

## IRON ORE

*Bibliography:* State Mineralogist Reports II, IV, V, X, XII-XV (inc.), XVII, XVIII, XXI-XXVII (inc.). Bulletins 38, 67, 91. Am. Inst. Min. Eng., Trans. LIII. Min. & Sci. Press, Vol. 115, pp. 112, 117-122; Vol. 123, pp. 94-96, 113-114.

During 1933 there were several shipments of iron ore in San Bernardino County to the cement mills to be used in the manufacture of high-iron cement. To avoid duplication, the value of these shipments is not given here, as it is included in the value of the cement thus made. There are considerable deposits of iron ore known in California, notably in Shasta, Madera, Placer, Riverside, San Bernardino, and Los Angeles counties, but production has so far been limited for lack of an economic supply of coking coal. Some pig iron has been made, utilizing charcoal for fuel, both in blast furnaces and by electrical reduction; also, ferrochrome, ferromanganese, and ferrosilicon have been made in California.

## Total Iron Ore Production of California.

Total iron ore production of California, with annual amounts and values, is as follows:

Year	Tons	Value	Year	Tons	Value
1881*.....	9,273	\$79,452	1915.....	724	\$2,584
1882.....	2,073	17,766	1916.....	3,000	6,000
1883.....	11,191	106,540	1917.....	2,874	11,496
1884.....	4,532	40,983	1918.....	3,108	15,947
1885.....			1919.....	2,300	13,796
1886.....	3,676	19,250	1920.....	5,975	40,889
1887.....			1921.....	1,970	12,030
1893.....	250	2,000	1922.....	3,588	18,868
1894.....	200	1,500	1923.....	3,102	18,665
1895.....			1924 <sup>a</sup> .....	785	4,710
1907.....	400	400	1925.....		
1908.....			1926 <sup>a</sup> .....	5,272	26,000
1909.....	108	174	1927.....		
1910.....	579	900	1928.....		
1911.....	558	558	1930 <sup>a</sup> .....	100	700
1912.....	2,508	2,508	1931.....		
1913.....	2,343	4,485	1932.....		
1914.....	1,436	5,128	Totals.....	71,905	\$553,329

\* Productions for the years 1881-1886 (inc.) were reported as "tons of pig iron" (U.S.G.S., Min. Res. 1885), and for the table herewith are calculated to "tons of ore" on the basis of 47.6% Fe as shown by an average of analyses of the ores (State Mineralogist Report IV, p. 242). This early production of pig iron was from the blast furnaces then in operation at Hotaling in Placer County. Charcoal was used in lieu of coke. Though producing a superior grade of metal, they were obliged finally to close down, as they could not compete with the cheaper English and eastern United States iron brought in by sea to San Francisco.

<sup>a</sup> Annual details concealed under 'Unapportioned.'

## LEAD

*Bibliography:* State Mineralogist Reports IV, VIII-XV (inc.), XVII-XXVIII (inc.).

The production of lead in California during 1933 was 772,463 pounds of recoverable metal valued at \$28,583, as compared with the 1932 figures, which were 2,418,626 pounds worth \$72,480. The average value of lead in 1933 was 3.7¢ per pound, compared with 3.0¢ per pound in 1932, 3.7¢ per pound in 1931, 5.0¢ per pound in 1930, and 6.3¢ per pound in 1929.

Distribution of the 1933 output by counties was as follows:

County	Pounds	Value
Alpine.....	1,169	\$43
Amador.....	31,845	1,178
Calaveras.....	6,363	235
Inyo.....	601,135	22,241
Los Angeles.....	2,006	74
Madera.....	5,442	201
Mono.....	4,583	170
Nevada.....	72,380	2,678
San Bernardino.....	27,936	1,034
Shasta.....	14,883	551
Ventura.....	1,631	64
Butte, El Dorado, Kern, Lassen, Placer, Plumas, Riverside, Sacramento, Siskiyou, Stanislaus, Trinity, Tuolumne, and Yuba *	3,090	114
Totals.....	772,463	\$28,583

\* Combined to conceal the output of individual operators in each.

## Lead Production of the United States.

According to preliminary data issued by the U. S. Bureau of Mines<sup>1</sup> during 1933, the production of primary lead in the United States was 259,616 short tons, valued at \$19,212,000, being an increase over the

<sup>1</sup> U. S. Bureau of Mines Mineral Market Report 286, May 24, 1934.

national production of 1932 which was 255,337 short tons worth \$15,-320,000 due to decreased selling price of lead from an average of 3.0¢ in 1932 to 3.7¢ per pound in 1933.

Lead Production of California, by Years.

Statistics on lead production in California were first compiled by this Bureau in 1887. Amount and value of the output, annually, with total figures, to date, are given in the following table:

Total Production of Lead in California, by Years

Year	Pounds	Value	Year	Pounds	Value
1877.....	<sup>a</sup> 7,836,000	\$391,800	1907.....	328,681	\$16,690
1878.....	8,640,000	328,320	1908.....	1,124,483	46,663
1879.....	4,502,000	191,335	1909.....	2,685,477	144,897
1880.....	4,200,000	215,460	1910.....	3,016,902	134,082
1881.....	6,680,000	325,316	1911.....	1,403,839	63,173
1882.....	<sup>b</sup> 4,000,000	196,800	1912.....	1,370,067	61,653

MANGANESE

*Bibliography:* State Mineralogist Reports XII-XV (inc.), XVIII, XXII-XXVII (inc.), XXIX. Bulletins 38, 67, 76, 91. U. S. G. S. Bull. 427. Eng. & Min. Jour.-Press, Vol. 117, p. 545.

During 1933, there was no manganese ore reported produced in California.

Imports of foreign manganese ore into the United States<sup>1</sup> during 1933, mainly from Soviet Russia, Gold Coast and Brazil, amounted to a total of 175,657 short tons of ore containing 88,917 tons of manganese valued at \$1,378,322 compared with 124,022 tons of ore containing 53,553 tons of manganese valued at \$1,219,383 in 1932.

The Tariff Act of 1930 provides for an import duty of 1¢ per pound on the metallic manganese contained, for "manganese ore (including

<sup>1</sup> U. S. Bureau of Foreign and Domestic Commerce, Monthly Summary, Dec., 1933.

ferruginous manganese ore) or concentrates containing in excess of 10 per centum of metallic manganese.”

#### Manganese Ore Production in California, by Years.

Production of manganese ore in California began at the Ladd Mine, San Joaquin County, in the Tesla District in 1867. When shipments of this ore to England ceased late in 1874, upwards of 5000 tons had been produced by that property. For some years following that, the output was small. The tabulation herewith shows California's output of manganese ore, annually, since 1887, when the compilation of such figures was begun by the State Mining Bureau:

Year	Tons	Value	Year	Tons	Value
1887.....	1,000	\$9,000	1911.....	2	\$40
1888.....	1,500	13,500	1912.....	22	400
1889.....	53	901	1913.....		
1890.....	386	3,176	1914.....	150	1,500
1891.....	705	3,830	1915.....	4,013	49,098
1892.....	300	3,000	1916.....	13,404	274,601
1893.....	270	4,050	1917.....	15,515	396,659

#### MOLYBDENUM

*Bibliography:* State Mineralogist Reports XIV, XVII-XXIV (inc.), XXVI-XXVIII (inc.). Bulletins 67, 91. U. S. Bur. of Min., Bulletin 111. Proc. Colo. Sci. Soc., Vol. XI.

Molybdenum is used as an alloy constituent in the steel industry, and in certain forms of electrical apparatus. Included in the latter is its successful substitution for platinum and platinum-iridium in electric contact-making and -breaking devices. In alloys it is used similarly to and in conjunction with chromium, cobalt, iron, manganese, nickel, tungsten, and vanadium. The oxides and the ammonium salt have important chemical uses.

The two principal molybdenum minerals are: the sulphide, molybdenite, and wolfeinite, lead molybdate; the former furnishing practically the entire commercial output. Molybdenite is found in or associated with acidic igneous rocks, such as granite and pegmatite.

Deposits of disseminated molybdenite are known in several localities in California, and in at least two places it occurs in small masses associated with copper sulphides. The first recorded commercial shipments of molybdenum ore in California were during the war 1916-

1918. Some development work has been recently done on a high-grade deposit at the head of the Kaweah River, Tulare County.

The Tariff Act of 1930 provides for an import duty of 35 cents a pound for the metallic molybdenum content of molybdenum ores or concentrates.

The present quotations on molybdenum ores are 42¢ per pound of  $\text{MoS}_2$  contained, delivered at Pittsburgh, Pa., and on ferromolybdenum are 95¢ per pound Mo, 50%-60% Mo f.o.b. shipping point.

During 1933 there was a small amount of molybdenum concentrates shipped in California, details of which are concealed under the 'unapportioned' item. This material came from Inyo County and had been mined for several years. There was also a prospect in Mono County from which several tons of ore were mined, but no shipments were reported during the year.

#### Molybdenum Production of California, by Years.

California's production of molybdenum ore by years is summarized in the following tabulation:

Year	Tons	Value
1916 -----	8	\$9,945
1917 -----	243	9,014
1918 -----	*	300
1919 -----		
1933 -----	<sup>a</sup>	<sup>a</sup>
Totals -----	251	\$19,259

\* 300 pounds of 90%  $\text{MoS}_2$  concentrate.

<sup>a</sup> Annual details concealed under 'Unapportioned.'

#### NICKEL

*Bibliography:* State Mineralogist Reports XIV, XVII, XXIV, XXV, XXVIII. U. S. G. S., Bulletin 640-D. U. S. Bureau of Standards, Circular 100.

Nickel occurs in the Friday Copper Mine in the Julian District, San Diego County. The ore is a nickel-bearing pyrrhotite, with some associated chalcopyrite. Some ore has been mined in the course of development work but not treated nor disposed of, as they were unable to get any smelter to handle it for them. Nickel ore has also been reported from other localities in California, but not yet confirmed.

Present quotations for nickel are around 35¢-36¢ per pound for the refined metal.

OSMIUM (see under Platinum)

PALLADIUM (see under Platinum)

#### PLATINUM

*Bibliography:* State Mineralogist Reports IV, VIII, IX, XII-XXVI (inc.), XXVIII. Bulletins 38, 45, 67, 85, 91, 92. U. S. Geol. Surv., Bulletins 193, 285. Trans. Am. Inst. Min. Eng., Vol. 47, pp. 217-218.

In California the platinum group metals are obtained as a by-product from placer operations for gold. The major portion of it comes from the dredges working in Amador, Butte, Sacramento, Stanislaus, Shasta and Yuba counties, with a small amount coming from the hydraulic

and surface-sluicing mines of Del Norte, Humboldt, Siskiyou and Trinity counties.

The production of platinum-group metals in California during 1933 totaled 438 ounces crude, of which only 269 ounces crude were sold, containing 236 fine ounces valued at \$7,255, compared with 278 fine ounces worth \$8,142 in 1932. This metal came from properties in Butte, Del Norte, Mendocino, Merced, Sacramento, Shasta, Stanislaus, Trinity and Yuba counties. Of the 236 fine ounces, 167 ounces were platinum; 24 ounces, iridium; 22 ounces, osmium; 11 ounces, osmiridium; 1 ounce, palladium; and 11 ounces ruthenium.

Prices.

The average prices during 1933 for the various platinum group metals per fine ounce, according to refiners' reports, as given by the U. S. Bureau of Mines<sup>a</sup> were: platinum, \$30.75; palladium, \$18.30; iridium, \$54.30; osmium, \$56; rhodium, \$53.50; and ruthenium, \$75, compared with the 1932 prices, which were: platinum, \$31.76; palladium, \$17.75; iridium, \$59.15; osmium, \$52.50; rhodium, \$46.50; and ruthenium, \$41.20.

Platinum Production of California, by Years.

The annual production and values since 1887 have been as follows:

Year	Ounces	Value	Year	Ounces	Value
1887.....	416	\$10,400	1912.....	603	\$19,731
1888.....	100	400	1913.....	368	17,738

QUICKSILVER

*Bibliography:* State Mineralogist Reports IV, V, XII–XV, XVII–XXIX (inc.). Bulletins 27, 78, 91. U. S. Geol. Surv., Monograph XIII. U. S. Bur. of Mines, Tech. Papers 96, 227; Bulletin 222, 335.

The production of quicksilver in California during 1933 was 4102 flasks valued at \$229,472. This was a decrease in both quantity and value as compared with the 1932 output, which was 5349 flasks worth

<sup>a</sup> U. S. Bureau of Mines, Mineral Market Report 268, Aug. 2, 1934.

\$279,780. The distribution of the 1933 output of quicksilver by counties was as follows:

County	Flasks	Value
Lake -----	1,610	\$90,592
Napa -----	842	47,059
San Benito -----	711	38,765
San Luis Obispo -----	285	15,759
Santa Clara -----	93	5,204
Sonoma -----	128	7,022
Colusa, Kern, Kings, Fresno, Monterey, Orange, Santa Barbara, and Trinity * -----	433	25,071
Totals -----	4,102	\$229,472

\* Combined to conceal the output of individual operators in each.

Prices.

During 1933 the average for New York monthly quotation<sup>1</sup> was \$59.227 per 76-pound flask. The average price for January was \$48.50 per flask, raising to \$66.50 per flask for October, and ending the year at \$66.33 per flask.

The average amount received by producers in California during 1933, according to reports received by the Division of Mines, was \$55.94 per 76-pound flask, compared with \$52.30 per flask in 1932.

The U. S. Bureau of Mines<sup>2</sup> reported the total production of the United States for 1933 at 9402 flasks valued at \$556,852. California was by a considerable margin the largest producing state with approximately 40 per cent of the total, other producing states being Oregon, Nevada, Texas, Arkansas, Washington, and Utah. The national production for 1932 was 12,622 flasks worth \$731,129.

Sluice boxes for cinnabar gravity separation at Big Boy Cinnabar Mine, Del Norte County.

Photo by John H. Maxson.

During 1933 imports of quicksilver amounted to 22,555 flasks worth \$778,007, of which 17,007 flasks came from Spain, 3212 flasks from

<sup>1</sup> Engineering and Mining Journal, Vol. 133, 1932.  
<sup>2</sup> U. S. Bureau of Mines Mineral Market Rept. 209, June 9, 1933.

Italy, and the remainder from Mexico and the United Kingdom. The 1933 imports showed an increase over those of 1932, which were 8114 flasks worth \$231,414.

#### Total Quicksilver Production of California.

Total amount and value of the quicksilver production of California, as given in available records, are shown in the following tabulation. Though the New Almaden Mine in Santa Clara County was first worked in 1824, and has been in practically continuous operation since 1846 (the yield being small the first two years), there are no available data on the output earlier than 1850. Previous to June, 1904, a 'flask' of quicksilver contained  $76\frac{1}{2}$  pounds; then 75 pounds upto and including 1927; beginning with 1928, 76 pounds. In compiling this table the following sources of information were used: for 1850-1883, table by J. B. Randol, in Report of State Mineralogist IV, p. 336; 1883-1893, U. S. Geological Survey reports; 1894 to date, statistical bulletins of the State Mining Bureau; also State Mining Bureau, Bulletin 27, "Quicksilver Resources of California," 1908, p. 10.

## SILVER

*Bibliography:* State Mineralogist Reports IV, VIII, XII-XXX (inc.). Bulletins 67, 91. Min. & Sci. Press, March 1, 1919.

The 1933 silver production in California totaled 402,591 fine ounces valued at \$140,907, as compared with the 1932 output of 493,533 fine ounces worth \$139,176. Of the 1933 output there were 20,460 fine ounces worth \$7,161, from placers. The average price of domestic silver was 35.0¢ per fine ounce in 1933 compared with 28.2¢ per ounce in 1932, and 29¢ per ounce in 1931.

Cyanide Plant at California Rand Mine, at Osdick, San Bernardino County.

Stanislaus -----	689	241
Trinity -----	2,194	768
Tulare -----	40	280
Tuolumne -----	800	19
Ventura -----	54	54
Yuba -----	3,369	1,179
Totals -----	402,591	\$140,907

The following paragraph is quoted from the U. S. Bureau of Mines, chapter on Gold and Silver from Mineral Year Book 1933-34 by courtesy of F. W. Horton and H. M. Gaylord:

"Silver. The silver output of California in 1933 was 402,591 ounces, as compared with 493,535 ounces in 1932, a decrease of 18 per cent. The production of lode silver was 382,131 ounces or 95 per cent of the total output but 20 per cent less than in 1932. The silver recovered from crude placer gold amounted to 20,460 ounces or 5 per cent of the total output, and an increase of 3,860 ounces or 23 per cent more than the placer output of silver in 1932. Nevada was the only county in the State that produced over 150,000 ounces of silver and this was entirely a by-product of gold mining and came almost wholly from the Grass Valley-Nevada City district. San Bernardino, Kern, and Inyo counties, in the order given, each produced between 20,000 and 100,000 ounces of silver in 1933, most of which was derived from the Randsburg, Mojave, and Cerro Gordo districts. Of the total silver output 65 per cent was recovered from gold ore, 24 per cent from gold-silver ore, 5 per cent from lead ore, 1 per cent from copper ore, and less than one-quarter per cent from dry silver ore. Of the total silver derived from lode mines, 37 per cent was recovered by amalgamation, 30 per cent by smelting concentrates, 20 per cent by smelting ore, old tailings, and mill cleanings, and 13 per cent by cyanidation."

#### Silver Production of California, by Years.

The amount and value of the silver production of California, and the average price, annually, since 1880 are given in the table following. In the table shown in the statistical bulletins previous to Bulletin 97 (for 1925), the values shown for 1880-1904 (inc.) were taken from the reports of the Director of the Mint, of which the figures for 1880-1896

(inc.) were based on 'coinage value' (\$1.2929 per fine ounce). We have recalculated these to commercial value, using the price table of the U. S. Geological Survey (McCaskey, H. D.), Gold and Silver, 1913: Mineral Resources of the U. S., Part I, p. 847). From 1905 to date, the figures are those of the U. S. Geological Survey and its successors, the U. S. Bureau of Mines.

Silver Production of California, by Years, Since 1880

Year	Fine oz.	Value	Average price per oz.	Year	Fine oz.	Value	Average price per oz.

TIN

*Bibliography:* Reports XV, XVII, XVIII, XXV. Bulletins 67, 91.

In 1928 and 1929 there was a small amount of tin produced from Californian ore as well as considerable development work which was done at the Temescal mine in Riverside County near Corona. There was an output from the district during 1891–1892 as tabulated below. Small quantities of stream tin have been found in some of the placer workings in northern California, but never in paying amounts.

Two occurrences have also been noted, in northern San Diego County. Crystals of cassiterite were found there, associated with blue tourmaline crystals, amblygonite and beryl. No commercial quantity has been developed, only small pockets have been taken out.

Total Output of Tin in California

## TITANIUM

*Bibliography:* State Mineralogist's Report XXIII.

During 1933 there was no production of titanium ores reported in California. In 1927 the first recorded shipments of titanium minerals were made in California. The total of the 1927 and 1928 production was 10,013 tons valued at \$150,195. All of this came from Los Angeles County and was produced from either the beach black sands which contained approximately 20% titaniferous iron and magnetite, the gangue being silica and several silicates, or from a lode deposit in the San Gabriel Mountains.

The market price of titanium minerals varies as to the titanium oxide it contains. Rutile 94%  $\text{TiO}$  at 10¢ a pound, ilmenite 45 to 52%  $\text{TiO}$  at \$10 to \$12 a ton, and ilmenite 32 to 35%  $\text{TiO}$  at \$7 to \$8 a ton, all prices Atlantic seaboard.

## TUNGSTEN

*Bibliography:* Reports XV, XVII, XVIII, XXII, XXIV, XXVII (inc.). Bulletins 38, 67, 91, 95. U. S. G. S., Bull. 652. Proc. Colo. Sci. Soc., Vol. XI. South Dakota School of Mines, Bulletin No. 12. Eng. and Min. Jour.-Press, Vol. 113, pp. 666-669, Apr. 22, 1922.

The commercial production of tungsten ores and concentrates in California began in 1905; and has been continuous since, with the exception of 1920-1922 (inclusive). The material shipped in 1933 was high-grade sorted ore and concentrates, coming from a single property each in Inyo, San Bernardino and Tulare counties. A total of 140 tons was reported produced, yielding 148 tons recalculated to 60%  $\text{WO}_3$ , valued at \$76,605.

Quotations in "Metal and Minerals Markets" during 1933 ranged from \$9.50 to \$15 per unit  $\text{WO}_3$  for Chinese wolframite, duty paid; \$9.50 to \$15 per unit  $\text{WO}_3$  for Bolivian scheelite, duty paid; from \$8 to \$15 for domestic scheelite. The highest prices were received at the end of the year. Present prices per unit  $\text{WO}_3$  at New York are: Chinese wolframite, duty paid, \$16.50 to \$16.75; Bolivian scheelite, \$16.50; domestic scheelite, \$16.50.

Imports of foreign tungsten ores and alloys into the United States during 1933, according to the U. S. Bureau of foreign and Domestic Commerce was 1,230,608 pounds valued at \$162,060, compared with 191,816 pounds worth \$19,365 in 1932. The Tariff Act of 1930 raised the duty on tungsten ore or concentrates to 50 cents per pound on the metallic tungsten contained therein. Duties are also provided for imported tungsten-bearing alloys.

Tungsten ore has been produced in California principally in the Atolia-Randsburg district in San Bernardino and Kern counties, followed by the Bishop district in Inyo County, with small amounts coming from Nevada County and from the district near Goffs, in eastern San Bernardino. Most of California's tungsten ore is scheelite (calcium tungstate), though wolframite (iron-manganese tungstate) and hübnerite (manganese tungstate) also occur. The deposits at Atolia are the largest and most productive scheelite deposits known.

**Total Tungsten Ore Production of California.**

The annual amount and value of tungsten ores and concentrates produced in California since the inception of the industry is given herewith, with tonnages recalculated to 60%  $\text{WO}_3$ :

**VANADIUM**

*Bibliography:* Reports XV, XXVI. Bulletins 67, 91. Proc. Colo. Sci. Soc., Vol. XI. U. S. Bur. of Mines, Bulletin 104.

No commercial production of vanadium has yet been made in California. Occurrences of this metal have been found at Camp Signal, near Goffs, in San Bernardino County, and two companies at one time did considerable development work in the endeavor to open up paying quantities. Some ore carrying lead vanadate has been developed in the 29 Palms, or Washington district, on the line between Riverside and San Bernardino counties, but no shipments reported.

Present New York quotations for ferrovanadium are \$2.70-\$2.90 per pound of vanadium f.o.b. works, and vanadium ore 26¢ per pound  $\text{V}_2\text{O}_5$  contained.

**ZINC**

*Bibliography:* State Mineralogist Reports XIV, XV, XVII, XVIII, XX-XXIV, XXVI, XXVII. Bulletins 38, 67, 91.

The recoverable zinc mined in California during 1933 amounted to 290,222 pounds valued at \$12,189. This material was flotation concentrates coming as a by-product from a gold mine in Nevada County and carbonate ore from Inyo County.

There was no zinc ore reported shipped during 1932 in California.

The zinc ores of Shasta and Calaveras counties are associated with copper, while those of Inyo, Los Angeles and San Bernardino are associated principally with lead-silver and zinc-silver ores.

The production of metallic zinc<sup>1</sup> at reduction plants in the United States during 1933 amounted to 337,269 short tons valued at \$28,-331,000 of which 1172 tons were reduced from foreign ores and 20,087 tons from secondary metal. The 1933 output was an increase over that of 1932, which was 221,866 short tons worth \$13,312,000.

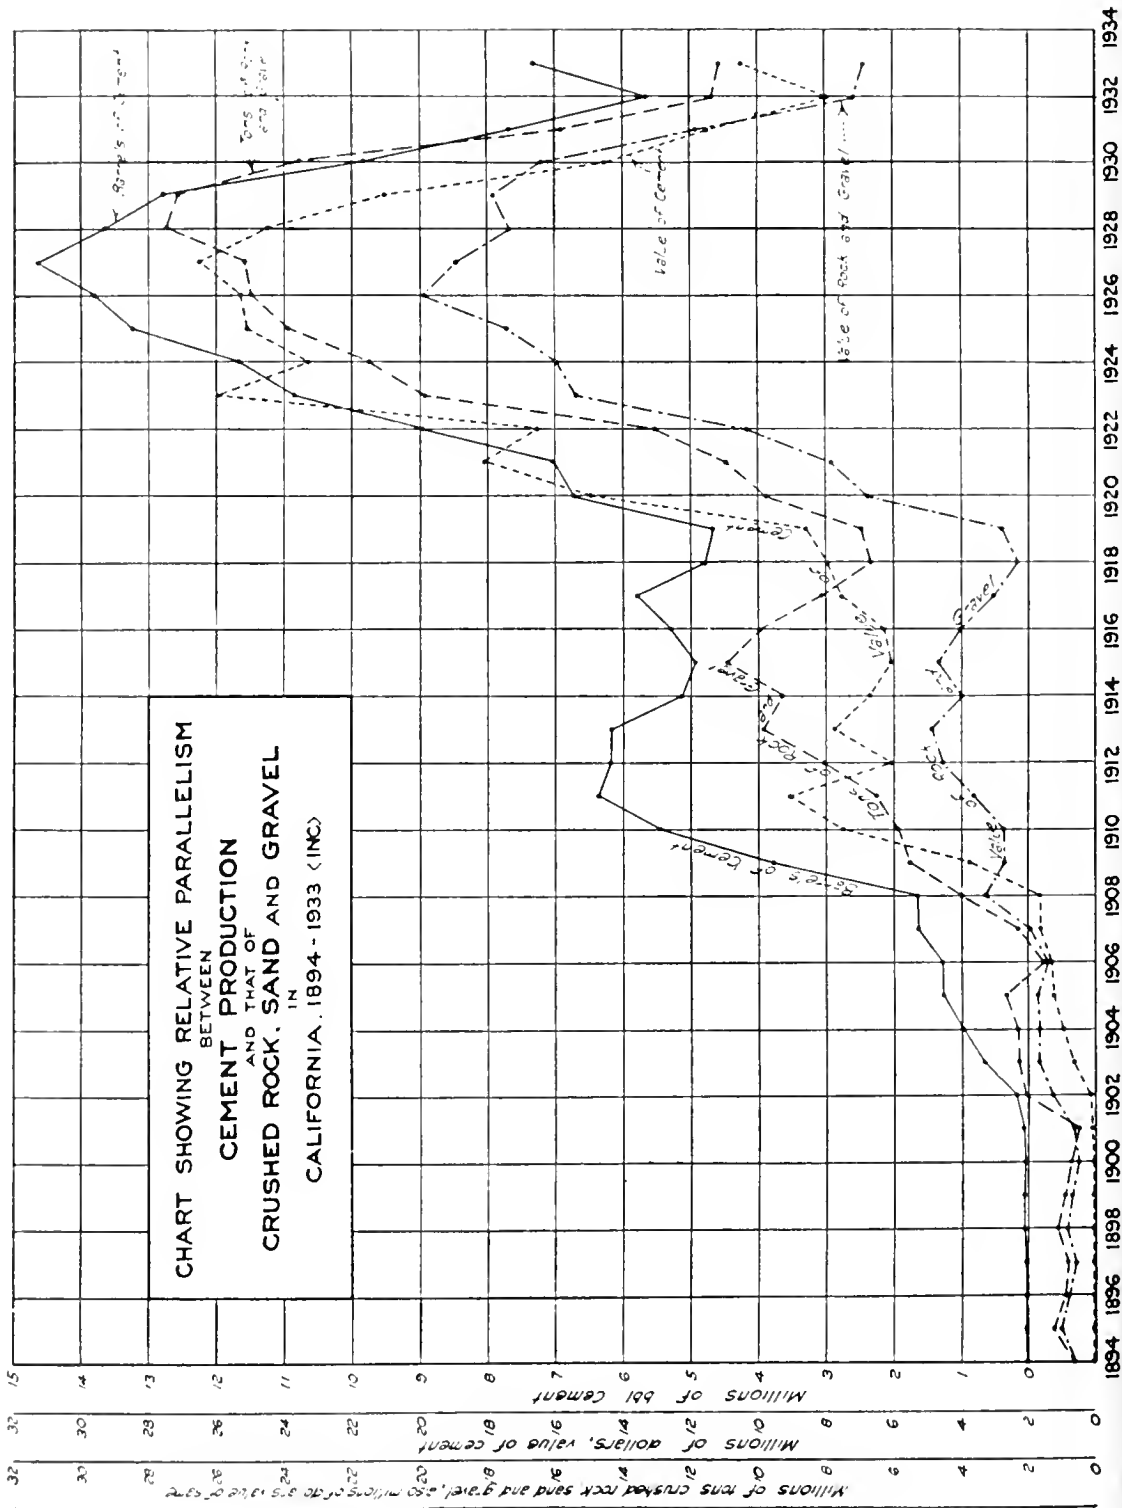

<sup>1</sup> U. S. Bureau of Mines, Mineral Market Report 270, April 19, 1934.

The average price per pound for zinc in 1933 was 4.2¢, compared with 3.0¢ in 1932, 3.8¢ in 1931, 4.8¢ in 1930 and 6.5¢ in 1929.

**Total Zinc Production of California.**

Total figures for zinc output of the state are as follows, commercial production dating back only to 1906:

Year	Pounds	Value	Year	Pounds	Value
1906	206,000	\$12,566	1920	1,188,009	\$96,229
1907	177,759	10,598	1921	846,184	42,309

CHAPTER FOUR

STRUCTURAL MATERIALS

*Bibliography:* State Mineralogist Reports XII–XXVIII (inc.). Bulletin 38. Spurr and Wormser, “Marketing of Metals and Minerals.” “Non-Metallic Minerals,” by R. B. Ladoo. See also under each substance.

As indicated by this subdivision heading, the mineral substances herein considered are those more or less directly used in building and structural work. California is independent, so far as these are concerned, and almost any reasonable construction can be made with materials produced in the State. Chromite, which was previously listed under structural material in the statistical reports of the State Division of Mines, is now transferred to the metals group, thus coinciding with the practice of the United States Bureau of Mines.

This branch of the mineral industry for 1933 was valued at \$19,444,-544, as compared with a total value of \$17,677,445 for the year 1932, the decrease being mainly due to miscellaneous stone, cement, brick and hollow building tile, though all other materials in this group, with the exception of bituminous rock, showed decreases in both amount and total value.

In 1933 all counties, with the exception of Alpine, Kings, and Sutter, contributed to this structural total. There is not a county in the fifty-eight counties of the State which is not capable of producing at least one of the materials under the classification and in 1926 every county contributed one or more substances to the group.

The following summary shows the value of the structural materials produced in California during the years 1932–1933, with increases or decreases in each instance:

Substance	1932		1933		Increase + Decrease— Value
	Amount	Value	Amount	Value	
Brick and hollow building tile		\$1,605,086		\$1,520,481	\$84,605—
Cement	5,657,549 bbls.	7,967,107	7,284,031 bbls.	10,331,395	2,364,288+
Granite		398,676		183,706	214,970—
Lime	27,510 tons	254,223	33,425 tons	271,619	17,396+
Marble <sup>a</sup>		42,505		23,178	19,327—
Sandstone		13,286		10,888	2,398—
Slate	*	*	5,343 tons	31,958	*
Stone, miscellaneous		7,183,643		6,871,581	312,062—
Unapportioned		<sup>b</sup> 212,919		<sup>c</sup> 199,738	13,181—
Total value		\$17,677,445		\$19,444,544	
Net increase					\$1,767,099

<sup>a</sup> Included under 'Unapportioned.'  
<sup>a</sup> Includes onyx and travertine.  
<sup>b</sup> Includes bituminous rock, chromite, magnesite, slate, tube-mill pebbles.  
<sup>c</sup> Includes bituminous rock, magnesite, tube-mill pebbles.

**ASPHALT**

*Bibliography:* State Mineralogist Reports VII, X, XII–XV (inc.), XVII, XVIII. Bulletins 16, 32, 63, 67, 69, 91.

Asphalt was for a number of years accounted for in the statistical reports by the State Mining Bureau, because in the early days of the oil industry, considerable asphalt was produced from outcroppings of oil sand, and was a separate industry from the production of oil itself. However, at the present time most of the asphalt comes from the oil refineries, which produce a better and more uniform grade; hence, its value is not now included in the mineral total, as to do so would be in part a duplication of the crude petroleum figures. Such natural asphalt as is at present mined is in the form of bituminous sandstones, and is recorded under that designation.

**BITUMINOUS ROCK**

*Bibliography:* State Mineralogist Reports XII, XIII, XV, XVII, XVIII, XXI, XXII, XXV, XXVI.

This material is essentially an uncemented sandstone which is saturated with and held together by a natural asphaltic constituent, probably the residue from the evaporation of a crude petroleum deposit. Bituminous rock is still used to a limited extent for road dressing in those districts adjacent to available deposits, though the manufacture of asphalt at the oil refineries has almost entirely superseded the direct use of the native material. Some of the Santa Cruz County production is put on the market as a material which can be laid cold. This material is especially applicable and valuable for patch jobs.

During 1933 shipments of bituminous rock were made from Santa Barbara and Santa Cruz counties with a single producer in each. The annual details are concealed under the 'Unapportioned' item so as not to reveal the output of either operator. The total of the 1931 and 1932 yields was 23,653 tons worth \$109,140. The 1933 output showed a slight decrease in both quantity and value from that of 1932.

## Bituminous Rock Production of California, by Years.

The following tabulation shows the total amount and value of bituminous rock quarried and sold in California, from the records compiled by the State Mining Bureau, annually since 1887:

Year	Tons	Value	Year	Tons	Value
1887.....	36,000	\$160,000	1912.....	44,073	\$87,467
1888.....	50,000	257,000	1913.....	37,541	78,479

## BRICK AND HOLLOW TILE

*Bibliography:* State Mineralogist Reports VIII, X, XII-XV (inc.), XVII-XXVIII (inc.). Bulletins 38, 99. Preliminary Report No. 7. Cal. Jour. of Development, June, 1925, pp. 5-6.

Bricks of many varieties and in important quantities are annually produced in California, as might be expected in a state with such diversified and widespread mineral resources. The varieties include common, fire, pressed, glazed, enamel, fancy, vitrified, sand-lime, and others. Not only do the plants here supply practically all of our own requirements in these products, but considerable quantities are shipped to contiguous territory and certain products are shipped over a much wider radius.

We also include under this heading the various forms of hollow building 'tile' or blocks. The application of this title to residence construction as well as to other structures has grown, although their total output for 1933 showed a decrease in value and tonnage as compared with the 1932 production.

The 1933 output of all kinds of brick showed a decrease in their total values of about 18 per cent and in amounts about 16 per cent, as compared with that of 1932. The 1933 production consisted of 57,905 M of common brick valued at \$549,550; 15,871 M of fire brick valued at \$657,393; 2253 M of glazed, pressed, fancy, vitrified paving brick, etc., valued at \$108,772; and 25,814 tons of hollow building tile valued at \$204,266, which gave a total value for the year for brick and hollow building tile of \$1,520,481. The 1932 output had a total value of \$1,605,086.

Los Angeles County had the largest output with nineteen operating plants, which made 30,634 M common brick worth \$268,955; 8749 M of fire brick worth \$322,886; 617 M of fancy, pressed and glazed brick worth \$48,013; and 3410 tons of hollow building tile worth \$19,832. Contra Costa County had three operating plants with an output of a total value of \$268,235; Alameda County with three operating plants, having a total value of \$179,152; Sacramento County with three plants, having an output of \$75,081; Santa Clara County with three plants, had an output valued at \$46,384. There were two operating plants each in Amador, Orange, Riverside, San Diego and San Joaquin counties; one each in Kern, Marin, Placer, San Bernardino, San Luis Obispo, Tulare and Ventura counties.

#### Brick and Hollow Tile Production of California, by Years.

Record of brick production in the State has been kept since 1893 by this Bureau, the figures for hollow building 'tile' or blocks being also included since 1914. The annual and total figures, for amount and value, are given in the following table:

<i>Year</i>	<i>Brick, M</i>	<i>Hollow building blocks, tons</i>	<i>Value</i>
1893	103,900	-----	\$801,750
1894	81,675	-----	457,125
1895	131,772	-----	672,360
1896	24,000	-----	524,740
1897	97,468	-----	563,240
1898	100,102	-----	571,362
1899	125,950	-----	754,730
1900	137,191	-----	905,210
1901	130,766	-----	860,488
1902	169,851	-----	1,306,215
1903	214,403	-----	1,999,546
1904	281,750	-----	1,994,740
1905	286,618	-----	2,273,786

#### CEMENT

*Bibliography:* State Mineralogist Reports VIII, IX, XII, XIV, XV, XVII, XVIII, XXI-XXVIII (inc.). Bulletin 38.

During 1933 there was a production in California of 7,284,031 barrels of cement valued at \$10,331,375 f.o.b. plant, being an increase in

both quantity and value from that of the previous year. The 1932 output was 5,657,549 barrels worth \$7,967,107 or an average value of \$1.40 per barrel. The average value per barrel in 1933 was \$1.42.

During 1933 shipments were made from eleven plants in nine counties to the extent of 7,369,947 barrels valued at \$10,520,083, as compared to those of 1932, which were 5,853,155 barrels worth \$8,202,038. These plants employed 1440 men in 1933. Two plants were operating and another making shipments from stock on hand in San Bernardino County and a single operating plant in each of the following counties: Calaveras, Contra Costa, Kern, Los Angeles,<sup>1</sup> Merced, Riverside, San Mateo and Santa Cruz.

#### Cement Production of California, by Years.

'Portland' cement was first commercially produced in California in 1891; though in 1860 and for several years following, a natural hydraulic cement from Benicia was utilized in building operations in San Francisco.

"The Benicia Cement Company in 1859-60 was turning out 50 to 100 barrels of cement a day and San Francisco was using about 12,000 barrels a year. The mill price of the product was then \$4 a barrel. By 1865, the San Francisco rate of consumption had increased to 100,000 barrels yearly, brick buildings largely taking the place of frame structures, and the price of cement had fallen to \$2.50 a barrel, about the same as it is today."<sup>2</sup>

The growth of the industry became rapid after 1902; since which time cement has continued to be an important factor in the industrial life of the state. Although the total cement figures, to date, are not of the same magnitude as those for gold and petroleum, it is interesting to note that the value of California's cement yield in the period 1920-1931 annually exceeded the value of her gold output.

## GRANITE

*Bibliography:* State Mineralogist Reports X, XII–XXVI (inc.), XXVIII. Bulletin 38.

The 1933 output of granite consisted of 62,495 cu. ft. of building stone valued at \$101,482; 50,632 cu. ft. of monumental stone valued at \$78,677; 5055 linear ft. of curbing valued at \$1,902; and 4408 cu. ft. of unclassified material, including a small amount of tuff and some volcanic rock which was used as building stone and flagstone, having a value of \$1,645; giving the total value of the year as \$183,706. This was a decrease from the 1932 total, which was \$298,675. The 1933 material came from nineteen quarries in eleven counties, four of which were in San Diego, with two each in Fresno, Lassen, Placer, and Sonoma counties; and one each in Madera, Mariposa, Nevada, Tulare, and Ventura counties.

So far as possible, granite production has been segregated in the statement herewith into the various uses to which the product was put. It will be noted, however, that a portion of the output has been entered under the heading 'Unclassified.' This is necessary because of the fact that some of the producers have no way of telling to what specific use their stone was put after they had quarried and sold the same in the rough.

**Varieties.**

For building purposes, the granites found in California, particularly the varieties from Raymond in Madera County, Rocklin in Placer County, and near Porterville in Tulare County, are unexcelled by any similar stone found elsewhere. The quantities available, notably at Raymond and Porterville, are unlimited. Most of California's 'granite,' particularly that found in the Sierra Nevada Mountains, is technically 'granodiorite' (that is, both plagioclase and orthoclase feldspars are present).

Granites of excellent quality for building and ornamental purposes are also quarried in Riverside and San Diego counties. Near Lakeside, San Diego County, there is a fine-grained, 'silver gray' granite of uniform texture and color, especially suited for monumental and ornamental work.

The Fresno County stone is a dark, hornblende diorite, locally called 'black granite,' whose color permits of a fine contrast of polished and unpolished surfaces, making it particularly suitable for monumental and decorative purposes. There is also a similar 'black granite' in Tulare County, near Success.

**Granite Production of California, by Years.**

The value of granite produced, annually, since 1887 has been as follows:

Year	Value	Year	Value
1887.....	\$150,000	1912.....	\$362,975
1888.....	57,000	1913.....	981,277
1889.....	1,329,018	1914.....	628,786
1890.....	1,200,000	1915.....	227,928

**LIME**

*Bibliography:* Reports XIV, XV, XVII-XXIX (inc.) Bulletin 38.

In California during 1933 there was an output of lime to the amount of 33,425 short tons valued at \$271,619, coming from two plants each in El Dorado, San Bernardino and Santa Cruz counties, and one each in Alameda and Tuolumne counties. The above figures showed an increase in both quantity and value from those of 1932, which were 27,510 tons worth \$254,223.

So far as we have been able to segregate the data, these figures include mainly only such lime as is used in building operations; though they do include a small proportion of calcined lime employed in agriculture and the chemical industries, the figures for which were not separable. A portion is hydrated lime. Limestone utilized in sugar making for smelter flux, as a fertilizer, and other special industrial uses, are classified under 'Industrial Materials.' That consumed in cement manufacture is included in the value of cement.

**Lime Production of California, by Years.**

The following tabulation gives the amounts and value of lime produced in California by years since 1894 when compilation of such records was begun by the State Mining Bureau. The figures for quantity have been recalculated from 'barrels', as shown in the earlier reports, to 'tons' for the years 1894-1922 (inc.) :

Lime Production of California, by Years

Year	Tons	Value	Year	Tons	Value
1894.....	37,350	\$318,700	1915.....	35,653	\$286,304

MAGNESITE

*Bibliography:* State Mineralogist Reports XII–XV (inc.), XVII–XXVII (inc.). Bulletins 38, 79, 91. U. S. Geol. Surv., Bulletins 355, 540. Min. Res. 1913, Pt. II, pp. 450–453. Min. & Sci. Press, Vol. 114, p. 237. “Magnesite”—Hearings before Comm. on Ways and Means, House of Repr., on H. R. 5218, June 16, 17, and July 17, 1919. Eng. Soc. W. Penn., Proc. 1913, Vol. 29, pp. 305–388, 418–444. Eng. & Min. Jour.-Pres., Vol. 114, July 29, and Dec. 2, 1922. U. S. Tariff Comm., “Crude and Caustic Calcined Magnesite. A Preliminary Statement of Information,” May 19, 1926.

The production of crude magnesite in California during 1933 came from a single property each in Santa Clara and Stanislaus counties, both being operated by the same company. The annual details are concealed under the ‘Unapportioned’ item to conceal the output of this single operator. Practically all was shipped in the calcined form.

The 1933 output showed an increase in both quantity and value from the 1932 figures. The 1932–1933 output showed a total of 40,303 short tons of crude magnesite valued at \$282,325, of which only a small amount was sold as such. Most of this material was calcined. The operators, reports show that a total of 17,400 short tons of calcined material, valued at \$524,350 rail shipping point, was shipped during 1932–1933, dead-burned and periclase for refractories and material for the plastic trade. From two to two and one-half tons of crude material are required to make one ton of calcined. The average price of crude magnesite reported for 1933 was \$5.60 per ton, compared with \$8.45 in 1931; \$10.04 in 1930; \$10.32 in 1929 and \$10 in 1932.

In California the known deposits are mostly in the metamorphic rocks of the Coast Ranges and the Sierra Nevada, being associated with serpentine areas. The notable exceptions are the sedimentary deposits at Bissell in Kern County and at Afton in San Bernardino County. Several thousand tons have been shipped from the Bissell deposit; and small shipments have been made from the Afton property.

Imports.

The tariff act of 1930 placed the following import duties on magnesite: Crude magnesite 15/32¢ per lb., caustic-calcined magnesite 15/16¢ per lb., dead-burned and grain magnesite, not suitable for manufacture into oxychloride cements, 23/40¢ per lb.; magnesite brick ¾¢ per lb., and 10 per cent ad valorem. The figures of imports for 1933, as published by the U. S. Bureau of Foreign and Domestic Commerce, show a total of 25,370 short tons valued at \$375,061, as compared with 8920 tons worth \$135,118 in 1932.

Total Magnesite Production of California.

The first commercial production of magnesite in California was made in the latter part of 1886 from the Cedar Mountain district,<sup>1</sup> southeast of Livermore, Alameda County. Shipments amounting to 'several tons' or 'several earloads' were sent by rail to New York; but there is apparently no exact record of the amount for that first year. The statistical records of the State Mining Bureau began with the year 1887, and the table herewith shows the figures for amount and value, annually, from that time. Shipments of magnesite from Napa County began in 1891 from the Snowflake Mine; from the Red Mountain deposits in Santa Clara County, in 1899; and from Tulare County in 1900.

MARBLE

*Bibliography:* State Mineralogist Reports XII–XV (inc.), XVII–XXIX (inc.). Bulletin 38. U. S. Bur. of Mines, Bull. 106.

The 1933 production of marble in California was valued at \$23,178 (including some onyx and travertine from Solano County and a small amount of limestone used as building stone and flagstone coming from

<sup>1</sup> See U. S. Geol. Surv.; Mineral Resources of U. S., 1886, pp. 6 and 696.

an operator in Santa Barbara County). The marble came from a single quarry each in Amador and Tuolumne counties. The 1933 output showed a decrease in value from that of 1932, which was worth \$42,505.

California has many beautiful and servicable varieties of marble, suitable for almost any conceivable purpose of construction or decoration. In the decorative class are deposits of onyx marble of beautiful coloring and effects. There is also serpentine marble suitable for electrical switchboard use.

#### Marble Production of California, by Years.

Data on annual production since 1887, as compiled by the State Mining Bureau, follows. Previous to 1894 no records of amounts were preserved.

Total Production of Marble in California, by Years

<sup>a</sup> Includes onyx and serpentine.

<sup>b</sup> Includes onyx and travertine.

#### ONYX and TRAVERTINE

*Bibliography:* State Mineralogist Reports XII-XV (inc.), XVII, XVIII, XXI, XXIII. Bulletin 38.

Onyx and travertine are known to exist in a number of places in California, but there has been only a small and irregular production since the year 1896. In 1933 there was one producer of travertine in Solano County. The 1933 output showed a decrease in both quantity and value from that of 1932, the figures of which are combined with marble. This material is used in terrazzo, auto gear-shift handles, bases for fountain-pen desk sets, and other ornamental purposes.

Onyx Production of California, by Years.  
Production by years has been as follows :

Year	Value	Year	Value
1887.....	*	1922.....	\$3,320

SANDSTONE

*Bibliography:* State Mineralogist Reports XII-XV, XVII, XVIII, XXI, XXIII, XXVI-XXVIII (inc.). Bulletin 38. U. S. Bur. of Mines, Bull. 124.

An unlimited amount of high-grade sandstone is available in California, but the wide use of concrete in buildings of every character, as well as the popularity of a lighter-colored building stone, has curtailed production in this branch of the mineral industry during recent years almost to the vanishing point. In 1933 a total of 25,980 cu. ft. of sandstone valued at \$10,888, was quarried in California and came from properties in Los Angeles, Monterey and Napa counties, by five operators; compared with 41,793 cu. ft. valued at \$13,286 in 1932.

Practically all of the material was flagstone which is used in garden walks, fountains, walls and fireplaces to give effect to Spanish and English types of homes. The material reported from Monterey and San Luis Obispo counties is in reality an indurated shale of the Monterey series, of a cream color and utilized as a building stone. Part of the material coming from Los Angeles County was schist and indurated shale.

A large portion of the standstone was sold for landscape work and used as stepping stones for walks and for fountains, walls, etc.

**Sandstone Production of California, by Years.**

Amount and value, so far as contained in the records of this Bureau, are presented herewith, with total value from 1887 to date:

Year	Cubic feet	Value	Year	Cubic feet	Value
1887.....		\$175,000	1911.....	255,313	\$127,314
1888.....		150,000	1912.....	66,487	22,574
1889.....		175,598	1913.....	62,227	27,870

**SERPENTINE**

*Bibliography:* State Mineralogist Report XV. Bulletin 38.

Serpentine has not been produced in California to a very large extent at any time. A single deposit, that on Santa Catalina Island, has yielded the principal output to date. Some material was shipped from there in 1917 and 1918, being the only output recorded since 1907. It was used for decorative building purposes and for electrical switchboards. As there was but a single operator, the figures were combined with those of marble output for those years.

**Serpentine Production of California, by Years.**

The following table shows the amount and value of serpentine from 1895 as recorded by this bureau:

**Total Serpentine Production in California**

Year	Cubic feet	Value	Year	Cubic feet	Value
1895.....	4,000	\$4,000	1904.....	200	\$2,310

## SLATE

*Bibliography:* State Mineralogist Reports XV, XVIII, XXIV, XXVIII. Bulletin 38. U. S. Geol. Surv., Bull. 586. U. S. Bur. of Mines, Bull. 218.

Slate was first produced in California in 1889. Up to and including 1910 such production was continuous, but since then it has been irregular. Large deposits of excellent quality are known in the State, especially in El Dorado, Calaveras and Mariposa counties, but the demand has been light owing principally to competition of cheaper roofing materials.

The production of slate in California for 1933 amounted to 5343 short tons valued at \$31,958 f.o.b. rail-shipping point and came from a single property each in El Dorado, Inyo and Tuolumne counties. The 1933 figures showed an increase in both amount and value over those of the previous year. The 1932 output was concealed under 'Unapportioned' so as not to reveal the yield of either operator for that year. Practically all of this slate was crushed and used for roofing granules.

#### Total Production of Slate in California.

A complete record of amount and value of slate produced in California follows:

Year	Squares	Value	Year	Squares	Value
1889.....	4,500	\$18,089	1908.....	6,000	\$60,000
1890.....	4,000	24,000	1909.....	6,961	45,660

			Total value.....		\$898,960

\* Annual details concealed under 'Unapportioned.'

<sup>a</sup> Quantity not shown as both 'squares' and 'tons' included.

<sup>b</sup> Tons.

#### MISCELLANEOUS STONE

*Bibliography:* State Mineralogist Reports XII-XXVIII (inc.). Bulletin 38; also annual statistical bulletins from 1915 to date.

'Miscellaneous stone' is the name used throughout this report as the title for that branch of the mineral industry covering crushed rock of all kinds, paving blocks, sand and gravel, and pebbles for grinding mills. The foregoing are very closely related from the standpoint of the producer; therefore it has been found to be most satisfactory to group these items as has been done in recent reports of this Bureau. So far as it has been possible to do so, crushed rock production has been subdivided into the various uses to which the product was put. It will be noted, however, a very large percentage of the output has been

tabulated under the heading 'Unclassified.' This is necessary because of the fact that many of the producers have no way of telling to what specific use their rock was put (or at least the proportions to each use) after they have quarried and sold the same to distributors and contractors.

In addition to amounts produced by commercial firms, both corporations and individuals, there is hardly a county in the State but uses more or less gravel and broken rocks on its roads. Of much of this, particularly in the country districts, there is no definite record kept.

Both the output of sand and gravel and crushed rock in California during 1933 showed a marked decrease in both amount and value from that of the previous year. This resulted in a total value of \$6,871,581 for 'miscellaneous stone' for 1933, as compared with \$7,183,643 for 1932. As in the past several years, Los Angeles County led all counties by a wide margin in the annual output of these products, its 1933 yield being valued at \$1,841,946 (compared with \$1,990,053 in 1932); followed by Alameda County second with \$649,105; San Diego County third with \$374,796; followed in turn by Santa Clara, Contra Costa, Mariposa, Riverside, Shasta, San Benito, Tuolumne, Modoc, Sonoma, and San Bernardino counties.

#### Paving Blocks.

There was no production of paving blocks in California during the year 1933.

The paving block industry has decreased materially of recent years, practically to the vanishing point, because of the increased construction of smoother pavements demanded by motor vehicle traffic. The blocks made in Solano County were of basalt; those from Sonoma are of basalt, andesite, and some trachyte, while those from Madera, Placer, Riverside, San Bernardino, and San Diego are of granite; and those from San Mateo County a sandstone.

The amount and value of paving block production, annually, since 1887 has been as follows:

Year	Amount M	Value	Year	Amount M	Value
1887.....	*10,000	\$350,000	1911.....	4,141	\$210,819
1888.....	10,500	367,500	1912.....	11,018	578,355
1889.....	7,303	297,236	1913.....	6,364	363,505
1890.....	7,000	245,000	1914.....	6,053	270,598
1891.....	5,000	150,000	1915.....	3,285	171,092
1892.....	*3,000	96,000	1916.....	1,322	54,362
1893.....	2,770	96,950	1917.....	938	38,567

1910.....	4,434	198,916	Totals.....	135,838	\$5,325,503

\* Figures for 1887-1892 (inc.) are for Sonoma County only, as none are available for other counties during that period though Solano County quarries were then also quite active.

<sup>a</sup> Annual details concealed under 'Unapportioned.'

**Grinding Mill Pebbles.**

The 1933 output of grinding mill pebbles in California was combined under 'Unapportioned' to conceal the production of a single operator in San Diego County.

The amount and value of grinding mill pebbles, annually, follows:

<i>Year</i>	<i>Tons</i>	<i>Value</i>
1915 -----	340	\$2,810
1916 -----	20,232	107,567
1917 -----	21,450	90,538
1918 -----	8,628	61,268
1919 -----	2,607	19,272
1920 -----	2,104	17,988
1921 -----	247	1,418
1922 -----	1,571	7,628
1923 -----	2,650	14,936
1924 -----	434	2,969
1925 -----	215	1,385
1926 -----	102	612
1927 -----	288	1,800
1928 -----	372	2,408
1929 } *		
1930 } -----	166	1,225
1931 } *		
1932 } -----	25	211
1933 -----	*	*
Totals -----	61,431	\$264,035

\* Annual details concealed under 'Unapportioned.'

**Sand and Gravel.**

A considerable part of the gravel excavated is passed through grading and washing plants, and the material over 2 inches in size is crushed. Much of it is utilized in concrete mixtures. Most of the gravel used for road surfacing and repairs as well as that for railroad ballast is creek-run or pit-run material which is spread upon the roads without undergoing any grading or washing.

The distribution of the 1933 output of sand and gravel by counties is given in the following table:

<i>County</i>	<i>Tons</i>	<i>Value</i>	<i>County</i>	<i>Tons</i>	<i>Value</i>
Alameda <sup>a</sup> -----	966,058	\$582,342	San Joaquin -----	102,589	\$47,976
Butte -----	18,084	10,082	Santa Barbara -----	67,441	38,019
Calaveras -----	25,591	21,870	Santa Clara -----	527,691	136,275
Contra Costa <sup>a</sup> -----	82,282	41,406	Shasta -----	106,568	65,558
Fresno -----	31,481	23,838	Sierra -----	6,450	2,833
Glenn -----	44,332	11,690	Siskiyou -----	29,139	18,016
Humboldt -----	13,193	6,197	Sonoma -----	222,179	112,179
Kern -----	49,170	336,911	Stanislaus -----	71,760	40,888
Lake -----	23,893	18,852	Tehama -----	37,734	24,353
Lassen -----	20,200	13,450	Trinity -----	2,325	2,375
Los Angeles <sup>b</sup> -----	1,789,005	737,638	Tulare -----	108,313	90,032
Mariposa -----	5,402	2,787	Tuolumne -----	2,940	1,904
Mendocino -----	37,866	28,369	Ventura <sup>a</sup> -----	178,847	97,432
Merced -----	22,900	12,875	Yuba -----	70,385	31,930
Modoc -----	7,160	4,000	Amador, Colusa, Del		
Mono -----	7,869	2,956	Norte, Imperial,		
Monterey <sup>a, b</sup> -----	61,194	58,791	Inyo, Placer, Plu-		
Napa -----	28,200	22,000	mas, San Luis		
Orange -----	45,582	25,256	O b i s p o, San		
Riverside <sup>a, b</sup> -----	186,181	88,899	Mateo <sup>a</sup> , Santa		
Sacramento <sup>a</sup> -----	88,493	55,971	Cruz and Yolo * -	62,991	41,499
San Bernardino -----	155,161	72,192			
San Diego <sup>a, b</sup> -----	310,783	248,331	Totals -----	5,617,432	\$2,877,972

\* Combined to conceal the output of a single operator in each.

<sup>a</sup> Includes molding sand.

<sup>b</sup> Includes blast sand.

Included in the above is a total of 17,516 tons of molding sand valued at \$39,722 coming from two properties in Riverside County; and one each in Alameda, Contra Costa, Monterey, Sacramento, San Diego,

San Luis Obispo, San Mateo and Ventura counties. The 1933 yield showed an increase compared with 1932, which was 16,746 tons worth \$37,969.

**Crushed Rock.**

To list the kinds and varieties of rock utilized commercially under this heading would be to run almost the entire gamut of the classification scale. Much depends on the kind available in a given district. Those which give the most satisfactory service are the basalts and other hard, dense, igneous rocks which break with sharp, clean edges. In many localities, river-wash boulders form an important source of such material. In such cases, combined crushing and washing plants obtain varying amounts of sand and gravel along with the crushed sizes. In Sacramento and Butte counties the tailings piles from the gold dredgers are the basis of like operations.

The values given are based on the selling price, f.o.b. cars, barges, or trucks, at the quarry.

A comparison of the above table of annual production of these materials with the similar table for cement (see *ante*) reveals the fact that the important growth of the crushed rock and gravel business has been coincident with the rapid development of the cement industry from the year 1902.

## CHAPTER FIVE

## INDUSTRIAL MATERIALS

*Bibliography:* State Mineralogist Reports XII-XXX (inc.). Bulletin 38. Min. & Sci. Press, Vol. 114, March 10, 1917. Spurr and Wormser, "Marketing of Metals and Minerals." "Non-Metallic Minerals," by R. B. Ladoo. See also under each substance.

The following mineral substances have been arbitrarily arranged under the general heading of 'Industrial Materials,' as distinguished from those which have a clearly-defined classification, such as metals, salines, structural materials, etc.

These materials, many of which are mineral earths, are, with four or five exceptions, as yet produced on a comparatively small scale. The possibilities of development along several of these lines are large, and with increasing transportation and other facilities, together with steadily growing demands, the future for this branch of the mineral industry in California is promising. There is scarcely a county in the State but might contribute to the output.

Up to within the last few years, at least, production has been in the majority of instances dependent upon more or less of a strictly local market, and the annual tables show the results of such a condition, not only in the widely-varying amounts of a certain material produced from year to year, but in widely-varying prices of the same material.

The more important of these minerals thus far exploited, so far as shown by value of the output, are barytes, bentonite (fuller's earth), pottery clay, diatomite, dolomite, gypsum, limestone, mineral water, pumice and volcanic ash, pyrite, silica, and soapstone and talc.

To the industrial group were added during 1933, carbon dioxide gas, which is now being produced from wells in Imperial County and wollastonite, a mineral from which mineral-wool is made, coming from Kern County. Also fluorspar was again shipped, for the first time since 1918.

This group, as a whole, showed a decrease in total value from \$3,-820,711 in 1932 to \$3,658,249 in 1933.

The following table gives the comparative figures for the amounts and value of industrial minerals produced in California during the years 1932 and 1933:

Substance	1932		1933		Increase+ Decrease- Value
	Amount	Value	Amount	Value	
Barytes.....	8,507 tons	\$49,409	8,405 tons	\$49,595	\$186+
Bentonite (fuller's earth).....	4,295 tons	57,670	4,605 tons	60,621	2,951+
Clay (pottery).....	167,284 tons	204,891	141,629 tons	211,711	6,820+
Dolomite.....	35,275 tons	40,956	54,456 tons	176,575	135,619+
Feldspar.....	2,294 tons	15,988	*	*	+
Gems.....		4,961		690	4,271-
Gypsum.....	46,867 tons	93,818	59,235 tons	120,451	26,633+
Limestone.....	168,950 tons	487,788	207,371 tons	487,712	76-
Mineral water.....	19,031,224 gals.	1,495,988	15,650,406 gals.	719,746	776,242-
Pumice and volcanic ash.....	9,891 tons	86,034	8,243 tons	61,087	24,947-
Silica (quartz and sand).....	33,997 tons	136,324	70,329 tons	266,520	130,196+
Soapstone and talc.....	10,690 tons	122,880	14,451 tons	153,668	30,788+
Unapportioned.....		\$1,024,005		\$1,349,873	325,868+
Total values.....		\$3,820,712		\$3,658,249	
Net decrease.....					\$162,463

\* Included under "Unapportioned."  
a Includes asbestos, diatomite, graphite, mica, pyrite, sillimanite-andalusite-cyanite group, sulphur.  
b Includes carbon dioxide, diatomite, feldspar, fluorspar, graphite, mica, mineral paint, pyrite, sillimanite-andalusite cyanite group, sulphur, wollastonite.

ASBESTOS

*Bibliography:* State Mineralogist Reports XII-XIX (inc.), XXII, XXVII (inc.), XXIX. Bulletins 38, 91. Canadian Dept. of M., Mines Branch Bulletin 69. Min. and Sci. Press, April 10, 1920, pp. 531-533. Eng. & Min. Jour.-Press, Vol. 113, pp. 617-625, 670-677. Asbestology, Vol. 5, No. 7, July, 1927.

During 1933 there was no production of asbestos reported in California. In 1932 there was a small output of chrysotile asbestos mined and shipped for testing. This material came from Napa County. There was no production of this material in 1931. Certain annual figures are combined under the 'Unapportioned' item to conceal the output of a single operator.

Asbestos Production of California, by Years.

Total amount and value of asbestos production in California since 1887, as given in the records of this Bureau, are as follows:

Year	Tons	Value	Year	Tons	Value
1887.....	30	\$1,800	1912.....	90	\$2,700

## BARYTES

*Bibliography:* State Mineralogist Reports XII, XIV, XV, XVII, XXI–XXVII (inc.). Bulletins 38, 87. Eng. & Min. Jour.-Press, Vol. 114, p. 109, July 15, 1922; Vol. 115, pp. 319–324, Feb. 17, 1923. U. S. Bureau of Mines, Inform. Circ. 6221, 6223.

During 1933 there was a commercial production of crude barytes in California amounting to a total of 8405 short tons valued at \$49,595 f.o.b. rail-shipping point, as compared with the 1932 output of 8507 tons worth \$49,409. The 1933 output came from Mariposa, Plumas and San Bernardino counties. This material was consumed in the manufacture of lithopone, in heavy-gravity oil-well drilling-mud, fillers, and barium chemicals.

The Tariff Act of 1930 placed a duty on foreign imported barytes ore, crude or unmanufactured, of \$4 per ton; ground or otherwise manufactured, of \$7.50 per ton.

Present quotations for barytes (93% BaSO<sub>4</sub>) vary from \$6 to \$7 (Calif. \$7) per ton, crude, f.o.b. rail-shipping point. Most baryte has to be washed and acid treated to remove iron stains or other impurities before being suitable for paint use.

Known occurrences of this mineral in California are located in Inyo, Los Angeles, Mariposa, Monterey, Nevada, San Bernardino, Shasta and Santa Barbara counties. The deposits at El Portal, in Mariposa County, have given the largest commercial production to date, in part witherite (barium carbonate, BaCO<sub>3</sub>). Witherite has also been found in Shasta County, but no shipments have yet been made from the deposit.

#### Total Barytes Production of California.

The first recorded production of barytes in California, according to the statistical reports of the State Mining Bureau, was in 1910. The annual figures are as follows:

Year	Tons	Value	Year	Tons	Value
1910.....	860	\$5,640	1923.....	2,925	\$16,058
1911.....	309	2,207	1924.....		
1912.....	564	2,812	1925.....		
1913.....	1,600	3,680	1926.....	4,978	38,165
1914.....	2,000	3,000	1927.....	17,993	90,617
1915.....	410	620	1928.....	13,406	55,888
1916.....	1,606	5,516	1929.....	26,796	168,829
1917.....	4,420	25,633	1930.....	19,783	133,107
1918.....	100	1,500	1931.....	27,832	156,647

1920.....	3,029	20,795	1933.....	8,405	49,595
1921.....	901	4,809			
1922.....	3,370	18,925	Totals.....	151,295	\$871,527

#### BENTONITE (Fuller's Earth)

*Bibliography:* State Mineralogist Reports XIV, XVII, XVIII, XXI, XXIII, XXV–XXVI (inc.). Bulletins 38, 91. U. S. Bureau of Mines, Bulletin 71. Eng. & Min. Jour.-Press, Vol. 121, pp. 837–842, May 22, 1926.

During 1933 there was produced and shipped in California 4605 short tons of bentonite (fuller's earth) valued at \$60,621, coming from seven properties, four of which were in San Bernardino County, two

in Inyo County and one in Kern County. The 1933 output showed an increase, as compared with that of 1932, which was 4295 tons worth \$57,670.

Previous to 1931 the Division of Mines classed this material under the heading of 'fuller's earth,' but it was thought advisable to change the name to bentonite, owing to the fact that much bentonite is employed in uses that can not be classed as fuller's earth and therefore has been classified in these reports under pottery clay. This made a confusion in classification. Bentonite is the name commonly applied to the clays of the montmorillonite and halloysite group ('rock soap').

Fuller's earth includes many kinds of unctuous clays. It is usually soft, friable, earthy, nonplastic, white and gray to dark green in color, and some varieties disintegrate in water. Production has come mainly from Calaveras and Solano counties, with other deposits noted also in Riverside, Fresno, Inyo and Kern counties.

The Tariff Act of June 21, 1930, placed a duty of \$1.50 a ton on foreign produced imported fuller's earth.

#### Bentonite Production of California by Years.

Bentonite including a small amount of fuller's earth was first produced commercially in this state in 1899, and the total amount and value of the output since that time are as follows:

Year	Tons	Value	Year	Tons	Value
1899.....	620	\$12,400	1918.....	37	\$333
1900.....	500	3,750	1919.....	385	3,810
1901.....	1,000	19,500	1920.....	600	6,000
1902.....	987	19,246	1921.....	1,185	8,295
1903.....	250	4,750	1922.....	6,606	48,756
1904.....	500	9,500	1923.....	3,650	55,125
1905.....	1,344	38,000	1924.....	5,290	67,295
1906.....	440	10,500	1925.....	5,280	91,842
1907.....	100	1,000	1926.....	23 552	250,192
1908.....	50	1,000	1927.....	13,018	154,764
1909.....	459	7,385	1928.....	53 313	501,743
1910.....	340	3,820	1929.....	15,541	170,563

#### CARBON DIOXIDE GAS

##### *Bibliography:* State Mineralogist Report XII.

Carbon dioxide gas was first produced commercially in California in 1894. This material came from a drift on the 575 level of the Santa Isabel shaft of the New Almaden Quicksilver Mine at Almaden, Santa Clara County. The drift was bulkheaded and a pipe was placed through the bulkhead for the gas to be drawn off. This gas was compressed into cylinders and used in the manufacture of soda water.

In 1933 carbon dioxide gas was again produced, this time from wells drilled near Niland, Imperial County. This material is being com-

pressed into cylinders and sent to an experimental plant for the manufacture of dry-ice.

**Carbon Dioxide Gas Production in California, by Years.**

**CLAY (Pottery)**

*Bibliography:* State Mineralogist Reports I, IV, IX, XII-XV, XVIII-XXVIII (inc.), Bulletins 38, 99. Preliminary Report No. 7. U. S. Bureau of Standards, Tech. Paper No. 262.

At one time or another in the history of the State, pottery clay has been mined in thirty-three of its counties. Of these, 17 contributed in 1932. In this report, 'pottery clay' refers to all clays used in the manufacture of red and brown earthenware, china and sanitary ware, flower pots, floor, faience and ornamental tiling, architectural terra cotta, sewer pipe, drain and roof tile, etc., and the figures for amount and value are relative to the crude material at the pit, without reference to whether the clay was sold in the crude form or was immediately used in the manufacture of any of the above finished products by the producer. It does not include clay used in making brick and hollow building blocks.

There are many other important uses for clay besides pottery manufacture. Among these may be enumerated paper, cotton goods, and chemicals. Clays of the montmorillonite and halloysite group ('rock soap') are being utilized successfully in the manufacture of soaps and for filtering oils and as oil-well drilling mud, also as an earth filler in irrigating ditches which run through porous ground.

During 1933 there was a total of 51 properties in 19 counties which reported an output of 141,629 short tons of pottery clay having a total value of \$211,711 f.o.b. rail-shipping point for the crude material, as compared with 48 properties in 17 counties, producing 167,284 tons worth \$204,890 in 1933.

Because of the fact that a given product often requires a mixture of several different clays, and that these are not all found in the same pit, it is necessary for most clay-working plants to buy some part of their raw materials from other localities. For these reasons, in compiling the clay industry figures, much care is required to avoid duplications. So far as we have been able to segregate the figures, from the data sent in by the operatives, we have credited the clay output to the counties from which the raw material originated; and have deducted tonnages used in brick manufacture, as bricks are classified separately, herein.

A tabulation of the direct returns from the producers, by counties, for the year 1933 is shown herewith:

## POTTERY CLAY IN 1933

<i>County</i>	<i>Tons</i>	<i>Value</i>	<i>Used in the manufacture of</i>
Alameda -----	4,101	\$3,946	Architectural terra cotta; chimney, drain and sewer pipe; faience, floor, decorative and roofing tile; garden furniture, refractories and various.
Amador -----	18,341	26,016	Architectural terra cotta; fire-clay products and refractories; chimney, drain and sewer pipe; floor, mantel and roofing tile; electrical porcelain and various.
Los Angeles -----	14,145	10,142	Architectural terra cotta; conduit and segment blocks; electrical porcelain and red earthenware; refractories; chimney, drain and sewer pipe; vents; floor, mantel and roofing tile; art pottery and various.
Orange County -----	13,086	49,762	Stoneware, refractories, vents; drain, floor and mantel tile and various.
Placer County -----	40,658	59,261	Architectural terra cotta; chimney, drain and sewer pipe; faience, floor, mantel and roofing tile; red earthenware; electrical porcelain, sanitary ware and various.
Riverside County -----	18,228	32,965	Conduit, sewer and drain pipe; red earthenware; faience, floor, mantel and roofing tile and various.
San Bernardino County -----	796	5,687	Floor and roofing tile; stoneware, sanitary ware, art pottery, refractories and various.
San Diego -----	2,896	3,445	Drain, floor and roofing tile; refractories and various.
Santa Clara -----	1,337	832	Sewer pipe, art pottery; drain, floor, mantel and roofing tile; stoneware and various.
Calaveras, Contra Costa, Fresno, Imperial, Inyo, Kern, <sup>a</sup> Marin, Monterey, Stanislaus, Ventura <sup>a</sup> *	28,041	19,655	Drain, roofing and mantel tile; saggars; electrical porcelain; refractory, red earthenware, garden furniture, oil-well drilling mud and various.
Totals -----	141,629	\$211,711	

\* Combined to conceal the output of a single operator in each.

<sup>a</sup> Includes clay and shale used for oil well drilling mud.

## POTTERY CLAY PRODUCTS

The values of the various pottery clay products made in California during 1933 totaled \$4,125,651, as compared with \$4,858,573 in 1932, their distribution being shown in the following tabulation:

<i>Product</i>	<i>Number of producers</i>	<i>Tons</i>	<i>Value</i>
Architectural terra cotta -----	6	3,827	\$366,957
Chimney pipe and flue lining -----	8	3,289	99,661
Drain pipe -----	17	2,589	42,140
Roofing tile -----	22	26,893	309,002
Electrical porcelain -----	5	----	393,131
Red earthenware -----	7	----	83,469
Stoneware and chemical stoneware -----	5	----	311,208
Sanitary ware and plumbing fixtures -----	5	----	792,619
Floor, faience, mantel and hand-made tile -----	31	----	796,260
Conduit pipe -----	4	2,111	42,901
Ground fire clay and high temperature cement -----	11	2,815	37,914
Sewer pipe -----	8	21,153	427,188
Art pottery -----	5	----	109,953
Miscellaneous: garden furniture, specialties, gas stove radiance, clay shapes, chimney arches, wall coping, terra cotta pipe, red vents, fire tile, gas-house tank blocks, and refractory shapes -----	15	----	313,248
Total value -----			\$4,125,651

Important increases were shown by stoneware and chemical stoneware; roofing tile, red earthenware, conduit pipe, and the miscellaneous group. All other groups showed a declined value from their 1932 total.

Pottery Clay Production of California, by Years.

Amount and value of crude pottery clay output in California since 1887 are given in the following table:

Year	Tons	Value	Year	Tons	Value
1887.....	75,000	\$37,500	1912.....	199,605	\$215,683
1888.....	75,000	37,500	1913.....	231,179	261,273
1889.....	75,000	37,500	1914.....	179,948	167,552

DIATOMITE (Diatomaceous Earth)

*Bibliography:* State Mineralogist Reports II, XII–XV (inc.), XVII–XXVIII (inc.), Bulletins 38, 67, 91. Am. Inst. Min. Eng., Bull. 104, August, 1915, pp. 1539–1550. U. S. Bur. of Mines, Rep. of Investigations: Serial No. 2431, Jan. 1923. Eng. & Min. Jour.-Press, Vol. 115, pp. 1152–1154, June 30, 1923.

Diatomite, also known as diatomaceous earth, infusorial earth, tripolite and kieselguhr, is very light (when dry a cubic foot weighs 18 to 20 pounds) and extremely porous, chalk-like materials composed of pure silica (chalk, being calcareous) which have been laid down under water and consist of the remains of microscopical infusoria and diatoms. The former are animal remains, and the latter are from plants.

The most important deposits in California thus far known are located in Monterey, Orange, San Luis Obispo, and Santa Barbara counties. The Santa Barbara material is diatomaceous and is of a superior quality, particularly for filtration uses which bring the higher prices. Infusorial or diatomaceous earths are also found in Fresno, Kern, Los Angeles, Plumas, San Benito, San Bernardino, San Joaquin, Shasta, Sonoma, and Tehama counties.

As about 65 per cent of the California output is from a single operator, we have concealed the exact figures under the 'Unapportioned' item in the State and county totals. There were seven operators during 1933 in Fresno, Los Angeles, Monterey, Santa Barbara, and Stanislaus counties. The shipments during the year showed a slight increase in total tonnage and value compared with 1932.

The material shipped was utilized for insulation of both heat and sound, filtration, paint, pigment, cement admixture, fillers, abrasives and for clarification of gasoline and kerosene.

Diatomite quarry of Johns-Manville Company at Lompoc, Santa Barbara County.  
*Photo by Walter W. Bradley.*

**Total Production of Diatomite in California.**

The first recorded production of these materials in California occurred in 1889; total amount and value of output, to date, are as follows:

Year	Tons	Value	Year	Tons	Value
1889.....	39	\$1,335	1913.....	8,645	\$35,968
1890.....			1914.....	12,840	80,350

## DOLOMITE

*Bibliography:* State Mineralogist Reports XV, XVII, XXVII, XXVIII.

The production of dolomite in California during 1933 was 54,456 short tons valued at \$176,575 and came from three properties in Inyo County and one each in Los Angeles and Monterey counties. The 1933 output was an increase in both amount and value over that of 1932, which was 35,257 tons worth \$40,956. The material shipped was utilized for steel-furnace flux and refractories, plaster, stucco, dash-coat, terrazzo, art stone, and for manufacture of CO<sub>2</sub>.

## Dolomite Production of California, by Years.

Previous to the 1915 statistical report of the State Mining Bureau, dolomite was included under limestone, as the two minerals are closely related chemically; but since dolomite, as such, has been found to have certain distinctive applications, we here give it a separate classification.

Amount and value of the output of dolomite, annually, have been as follows:

Year	Tons	Value
1915.....	4,192	\$14,504
1916.....	13,313	46,566
1917.....	27,911	66,416
1918.....	24,560	79,441
1919.....	24,502	67,953
1920.....	42,388	132,791
1921.....	31,195	99,155
1922.....	52,409	114,911
1923.....	69,519	142,615
1924.....	28,843	71,271
1925.....	42,852	104,900
1926.....	68,640	119,313
1927.....	45,976	79,442
1928.....	38,379	85,342
1929.....	58,644	156,928
1930)*.....	66,564	161,245
1931)*.....	35,275	40,956
1932.....	54,456	176,575
Totals.....	729,618	\$1,760,324

\* Annual details concealed under 'Unapportioned.'

## FELDSPAR

*Bibliography:* State Mineralogist Reports XV, XVII-XXVIII (inc.). Bulletins 67, 91. U. S. Bureau of Mines, Bulletin 92. Eng. & Min. Jour.-Pres, Vol. 115, pp. 535-538, Mar. 24, 1923.

The 1933 feldspar production showed a slight decrease in both amount and value from that of 1932 and is under the 'Unapportioned' item to conceal the output of a single operator in San Diego County. The 1932 yield amounted to 2294 short tons valued at \$15,988.

## Total Feldspar Production of California.

Total amount and value of feldspar production in California since the inception of the industry are given in the following table, by years:

## Total Feldspar Production in California

Year	Tons	Value	Year	Tons	Value
1910.....	760	\$5,720	1923.....	11,100	\$81,800
1911.....	740	4,560	1924.....	9,055	68,112
1912.....	1,382	6,180	1925.....	8,165	59,615

1921.....	4,349	28,343			
1922.....	4,587	37,109	Totals.....	131,231	\$873,038

\* Annual details concealed under 'Unapportioned'.

## FLUORSPAR

*Bibliography:* State Mineralogist Reports XVII, XVIII, XXIV, XXVI. Bulletins 67, 91. Eng. & Min. Jour.-Press, Vol. 177, pp. 489-492, Mar. 22, 1924.

During 1933 in California there was an output of fluorspar coming from San Bernardino County. The annual details are under the 'Unapportioned' item to conceal the output of a single operator. This material was shipped to the steel mills to be used as a flux.

Fluorspar, or calcium fluoride,  $\text{CaF}_2$ , is one of the most important nonmetallic minerals from an industrial standpoint. About 80 per cent of the commercial mineral is prepared in the 'gravel' form and utilized as a flux in the manufacture of steel, for which use no substitute has yet been found.

The California deposits have been reported in Los Angeles, Mono, Riverside and San Bernardino counties. A previous commercial production was made in 1917-1918, when a total of 79 tons valued at \$991 was shipped from Riverside County.

Present quotations (Metal and Mineral Markets) are: not less than 85 per cent  $\text{CaF}_2$  and not over 5 per cent  $\text{SiO}_2$ , \$16 per ton; No. 2 lamp \$17.50 per ton.

## GEMS

*Bibliography:* State Mineralogist Reports II, XIV, XV, XVII, XVIII, XX, XXI-XXVIII (inc.). Bulletins 37, 67, 91. U. S. G. S., 'Mineral Resources of the U. S.'; Bull. 603, p. 208. Bull. Dept. Geol. Univ. of Cal., Vol. 5, pp. 149-153, 331-380. Am. Jour. Sci., Vol. 31, p. 31.

The production of gem materials in California has been somewhat irregular and uncertain since 1911. The compilation of complete statistics is difficult owing to widely-scattered places at which stones are gathered and marketed, for the most part in a small way. The gem material reported in California during 1933 had a total value of \$690 in the rough. The 1933 output came from Butte, Riverside and Kern counties and consisted of diamonds, rose quartz, and Iceland spar. The above showed a decreased value from the 1932 output, which was worth \$4,961.

**Total Production of Gem Materials in California.**

The value of the gem output in California annually since the beginning of commercial production is as follows:

Year	Value	Year	Value
1900.....	\$20,500	1918.....	\$650
1901.....	40,000	1919.....	5,425
1902.....	162,100	1920.....	36,056
1903.....	110,500	1921.....	10,954
1904.....	136,000	1922.....	1,312
1905.....	148,500	1923.....	13,220
1906.....	497,090	1924.....	4,800
1907.....	232,642	1925.....	10,663
1908.....	208,950	1926.....	9,049
1909.....	193,700	1927.....	7,035

1915.....	3,565	1933.....	690
1916.....	4,752		
1917.....	3,049	Total.....	\$2,254,419

**GRAPHITE**

*Bibliography:* State Mineralogist Reports XIII, XIV, XV, XVII, XXVI (inc.). Bulletins 67, 91. U. S. G. S., Min. Res., 1914, Pt. II.

Graphite (also called plumbago) has been produced from time to time in the State, coming principally from Sonoma and Los Angeles counties.

Occurrences of graphite has been reported at various times from Calaveras, Fresno, Imperial, Inyo, Los Angeles, Mendocino, San Bernardino, San Diego, Siskiyou, Sonoma and Tuolumne counties. During 1931 to 1933 there was a small production of graphite in California from a property in Los Angeles County. The annual details are concealed under 'Unapportioned,' owing to there having been but a single operator.

**Graphite Production of California, by Years.**

According to the records of the State Mining Bureau, the graphite production of California, by years, has been as follows:

Year	Pounds	Value
1901.....	128,000	\$4,480
1902.....	84,000	1,680
1903.....		
1913.....	2,500	25
1914.....		
1915.....		
1916.....	29,190	2,335
1917.....		
1918.....	*770,000	37,225

1933.....*		
Totals .....	2,269,690	\$86,975

\* Annual details concealed under 'Unapportioned,' on account of a single producer.

## GYPSUM

*Bibliography:* State Mineralogist Reports XIV, XV, XVII, XVIII, XXII, XXIII, XXV-XXVIII (inc.). Bulletins 38, 67, 91. U. S. Geol. Surv., Bull. 223, 413, 430, 697. U. S. Bur. of Standards, Circular No. 281.

During the year 1933 there were shipments of gypsum in California amounting to 59,235 short tons valued at \$120,451, coming from two properties in Riverside County and a single property each in Fresno, Imperial and Merced counties. This was an increase in both quantity and value from the 1932 output, which was 46,867 tons worth \$93,818.

**Total Production of Gypsum in California.**

Production of gypsum annually in California since such records have been compiled by this Bureau is as follows:

Year	Tons	Value	Year	Tons	Value
1887.....	2,700	\$27,000	1912.....	37,529	\$117,388
1888.....	2,500	25,000	1913.....	47,100	135,050
1889.....	3,000	30,000	1914.....	29,734	78,375

## LIMESTONE

*Bibliography:* State Mineralogist Reports IV, XII-XV (inc.), XVII-XXIX (inc.). Bulletins 38, 91. Oregon Agr. College Extension Bulletin 305. Eng. and Min. Jour.-Press, Vol. 120, pp. 249-253.

'Industrial' limestone was produced by 20 operators in 10 counties in California during 1933 to the amount of 207,371 short tons valued at \$487,712, as compared with the 1932 output, which was 168,950 tons worth \$487,788. The 1933 yield came from four properties each in El Dorado and Santa Clara counties, three in Santa Cruz County; two each in San Bernardino and Tuolumne counties; and one each in Alameda, Fresno, Mendocino, San Mateo and Ventura counties.

The amount here given does not include the limestone used in the manufacture of cement nor for macadam and concrete, nor of lime for building purposes; but accounts for that utilized as a smelter and foundry flux, for glass and sugar making, and other special chemical and manufacturing processes. It also includes that utilized for fer-

tilizers (agricultural 'lime'), 'roofing gravel,' paint and concrete filler, whiting for paint, putty, kalsomine, terrazzo, paving dust, chicken grit, carbon dioxide gas, 'paving compound,' facing dust for concrete pipe, also for rubber and magnesite mix. The material from Fresno and Ventura counties and one operator in San Bernardino County was marl; and that from Alameda, San Mateo and Santa Clara counties was shells, dredged from San Francisco Bay, all of which was ground and used for agricultural purposes and poultry grit. Of the total 'industrial' limestone produced in 1933, approximately 78,607 short tons worth \$180,422 were used for agricultural purposes and poultry grit.

Distribution of the 1933 output of limestone was as follows:

County	Tons	Value
El Dorado	120,026	\$280,047
San Bernardino	9,836	28,472
Santa Clara <sup>b</sup>	30,646	71,557
Santa Cruz	6,413	22,587
Alameda, <sup>b</sup> Fresno, <sup>a</sup> Mendocino, San Mateo, <sup>b</sup> Tuolumne, and Ventura <sup>a *</sup>	40,450	85,049
	207,371	\$487,712

\* Combined to conceal the output of individual operators in each.

<sup>a</sup> Includes marl.

<sup>b</sup> Includes shells.

Limestone Production of California, by Years.

The following tabulation gives the amounts and value of 'industrial' limestone produced in California by years since 1894 when compilation of such records was begun by the State Mining Bureau. These ton-nages consist principally of limestone utilized for flux, glass and sugar making, agricultural, chemical, and other special industrial purposes. That utilized in cement manufacture is not included:

Limestone Production of California, by Years

Year	Tons	Value	Year	Tons	Value
1894	15,420	\$19,275	1915	146,324	\$156,288
1895	71,355	71,690	1916	187,521	217,733

LITHIA

*Bibliography:* State Mineralogist Reports II, IV, XIV, XXI. Bulletins 38, 67, 91.

Lithia mica, lepidolite (a silicate of lithium and others), utilized in the manufacture of artificial mineral water, fireworks, glass, etc., has

been mined in San Diego County since 1899, except between 1905 and 1915, though there was none shipped in 1923, 1925, 1929-1933 (inc.). During 1930 there was a small amount of lepidolite mined in California, but none shipped. Some amblygonite, a lithium phosphate, is occasionally also obtained from pockets associated with the gem tourmalines.

Lithia mica total production in the State has been as follows:

Year	Tons	Value	Year	Tons	Value
1899.....	124	\$4,600	1920.....	10,046	\$153,502
1900.....	440	11,000	1921.....	*1,365	20,781

#### MICA

*Bibliography:* State Mineralogist Reports II, IV, XXVI-XXVIII (inc.). Bulletins 38, 67, 91. U. S. Geol. Surv., Bull. 740; Min. Res. of U. S. Eng. & Min. Jour.-Press, Vol. 115, pp. 55-60, Jan 13, 1923.

Sericite, a fine-grained variety of muscovite, has been produced continuously since 1929 in California. The 1933 output came from a single property in Imperial County. The annual details are concealed in the 'Unapportioned' item so as not to reveal production of the operator. This type of material is used as a cheap grade of ground mica for roofing, as a refractory, foundry facing, and decorative material to imitate snow.

Production of mica in California has been as follows:

Year	Tons	Value
1902.....	50	\$2,500
1903.....	50	3,800
1904.....	50	3,000
1929.....

\* Annual details concealed under 'Unapportioned.'

#### MINERAL PAINT

*Bibliography:* State Mineralogist Reports XII-XIX (inc.), XXI, XXII-XXVIII (inc.). Bulletins 38, 91.

During 1933 there was a small amount of mineral paint shipped in California coming from a single property in Alameda County, the details of which are concealed under the 'Unapportioned' item. There was no output in 1932, that being the first year since the production of this material was first reported commercially in 1890 in this State that there were no shipments.

These materials have come from Alameda, Amador, Butte, Calaveras, Colusa, Los Angeles, Napa, Nevada, Placer, Riverside, Shasta, Sonoma, Stanislaus and Ventura counties. There are also other deposits that may have possible commercial value, but as yet there have been no commercial shipments from El Dorado, Imperial, Kern, Kings, Lake, Mendocino, San Diego, Siskiyou, Trinity and Yuba counties, in which they are found.

#### Mineral Paint Production of California, by Years.

The first recorded production of mineral paint materials in the State was in the year 1890. The output, showing annual amount and value since that time, is given herewith:

Year	Tons	Value	Year	Tons	Value
1890.....	40	\$480	1913.....	303	\$1,780
1891.....	22	880	1914.....	132	847
1892.....	25	750	1915.....	311	1,756

#### MINERAL WATER

*Bibliography:* State Mineralogist Reports VI, XII-XVIII (inc.), XXI-XXIX (inc.). U. S. G. S., Water Supply Paper 338. Min. Res., 1914, 1916. 'Mineral Springs and Health Resorts of California,' by Dr. Winslow Anderson, 1890. U. S. Dept. of Agr., Bur. of Chem., Bulletin 91.

A widespread production of mineral water is shown annually in California. These figures refer to mineral water actually bottled for sale, or for local consumption. Water from some of the springs having a special medicinal value brings a price many times higher than the average shown, while in some cases the water is used merely for drinking purposes and sells for a nominal figure. Health and pleasure resorts are located at many of the springs. The waters of some of the hot springs are not suitable for drinking, but are very efficacious for bathing. From a therapeutic standpoint, California is particularly rich in mineral springs.

Commercial production of mineral water in California during 1933 amounted to 15,650,406 gallons worth \$719,746. This was a decrease in both quantity and value from the 1932 output, which was 19,031,224

gallons valued at \$1,495,988. The 1933 output was distributed as follows:

<i>County</i>	<i>Gallons</i>	<i>Value</i>
Lake -----	11,799	\$11,177
Los Angeles -----	6,672,359	335,310
Napa -----	15,237	9,940
Sonoma -----	23,016	2,390
Butte, Colusa, Contra Costa, Marin, Orange, Placer, Riverside, San Bernardino, San Diego, San Francisco, San Luis Obispo, Santa Barbara, and Siskiyou *-----	8,927,995	360,929
Totals -----	15,650,406	\$719,746

\* Combined to conceal output of individual operators in each.

The production above tabulated either came from springs or artesian wells, and was bottled, in part with artificial carbonation, but mostly natural, and sold for drinking purposes. A large part was used in the preparation of soft drinks with flavors.

#### Mineral Water Production of California, by Years.

Mineral water was bottled for sale, at the Napa Soda Springs, Napa County, as early as 1856,<sup>1</sup> and at other springs in California, notably The Geysers, Sonoma County, also at early dates; but there are no figures available earlier than the year 1887. Amounts and values, annually, since that year are shown herewith:

<i>Year</i>	<i>Gallons</i>	<i>Value</i>	<i>Year</i>	<i>Gallons</i>	<i>Value</i>
1887.....	618,162	\$144,368	1912.....	2,497,794	\$529,384
1888.....	1,112,202	252,990	1913.....	2,350,792	599,748
1889.....	808,625	252,211	1914.....	2,443,572	476,169
1890.....	258,722	89,786	1915.....	2,274,267	467,738

#### PHOSPHATES

*Bibliography:* State Mineralogist Report XXI. Bulletins 67, 91.

No commercial production of phosphates has been recorded from California, though occasional pockets of the lithium phosphate, amblygonite,  $\text{Li (AlF) PO}_4$ , have been found associated with the gem tourmaline deposits in San Diego County. Such production has been classified under lithia.

<sup>1</sup> Cronise, T. F., The natural wealth of California, p. 182, 1868.

## PUMICE and VOLCANIC ASH

*Bibliography:* State Mineralogist Reports XII, XIV, XV, XVII, XVIII, XXII–XXVIII (inc.). Bulletin 38. U. S. Bureau of Mines I. G. 6560. (Sec 'Tufa.')

The production of pumice and volcanic ash in California during the year 1933 amounted to 8243 short tons valued at \$61,067, coming from four properties in Inyo County and one each in Kern, Madera, Mono, Napa, San Bernardino and Siskiyou counties. The 1933 output showed a decrease from that of 1932, which was 9892 tons worth \$86,034.

The material from three of the deposits in Inyo County and from Mono, Napa and Siskiyou counties was 3670 tons pumice and was used in acoustic plaster, light-weight aggregate in concrete, for abrasive purposes and for chicken-house litter. The product from one party in Inyo and that from Kern, Madera and San Luis Obispo counties was 4573 tons of volcanic ash or tuff variety and was employed in making soap, cleanser compounds, a large tonnage being utilized as a concrete filler in cement displacement, and in asphalt and as a carrier for dry agricultural sprays. The Kern County ash is going into the preparation of one of our popular and nationally advertised brands of cleanser compounds.

## Pumice Production of California, by Years.

Commercial production of pumice in California was first reported to the State Mining Bureau in 1909, then not again until 1912, since which year there has been a small annual output, as indicated by the following table:

Year	Tons	Value	Year	Tons	Value
1909.....	50	\$500	1923.....	2,936	\$16,309
1910.....			1924.....	4,919	33,404
1911.....			1925.....	5,319	32,937
1912.....	100	2,500	1926.....	7,170	48,350
1913.....	3,590	4,500	1927.....	13,779	168,896
1914.....	50	1,000	1928.....	10,440	105,055
1915.....	380	6,400	1929.....	10,449	76,123

1922.....	613	4,248			

## PYRITES

*Bibliography:* State Mineralogist Reports XVIII, XIX, XXII, XXV, XXVI. Bulletins 38, 91. Min. and Sci. Press, Vol. 144, pp. 825, 840.

Shipments of pyrite in California during 1932 and 1933 amounted to 72,271 short tons valued at \$297,832. The annual details are placed in the 'Unapportioned' item to conceal the output of either operator. The 1933 production showed an increase in both amount and value over that of 1932 or 1931.

This material was mostly used in the manufacture of sulphuric acid for explosives and fertilizer. Some iron sulphate had been pro-

duced previously and was utilized directly in the preparation of an agricultural fertilizer and insecticide. The sulphur content ranged up to 50.8% S.

This does not include the large quantities of pyrite, chalcopyrite, and other sulphides which are otherwise treated for their valuable metal contents. Some sulphuric acid is annually made as a by-product in the course of roasting certain tonnages of Mother Lode auriferous concentrates while under treatment for their precious metal values.

#### Pyrites Production in California, by Years.

The total recorded pyrites production in California to date is as follows:

Year	Tons	Value	Year	Tons	Value
1898.....	6,000	\$30,000	1917.....	111,325	\$323,704
1899.....	5,400	28,620	1918.....	128,329	425,012
1900.....	3,612	21,133	1919.....	147,024	540,300
1901.....	4,578	18,429	1920.....	146,001	530,581
1902.....	17,525	60,306	1921.....	110,025	473,735
1903.....	24,311	94,000	1922.....	151,381	570,425

\* Annual details concealed under 'Unapportioned'.

#### SHALE OIL

*Bibliography:* State Mineralogist Report XIX. U. S. Geol. Surv., Bulletins 322, 729. U. S. Bur. of Mines, Bull. 210. Eng. and Min. Jour.-Press, Vol. 118, No. 8, pp. 290-292, Aug. 23, 1924. Chem. & Met. Eng., Vol. 32, No. 6, Feb., 1925. Min. Congress Jour., Dec., 1924.

Two plants on a more or less experimental scale have operated in California, with commercial production beginning in a small way in 1922. The product, in part, was sold for utilization as a flotation oil in metallurgical work, and part consumed as fuel at the plants. There was no production reported for 1933.

#### Shale Oil Production of California, by Years

## SILICA (Sand and Quartz)

*Bibliography:* State Mineralogist Reports IX, XIV, XV, XVII, XVIII, XX-XXVIII (inc.). Bulletins 38, 67, 91.

We combine these materials because of the overlapping roles of vein quartz which is mined for use in glass making and as an abrasive, and that of silica sand which, although mainly utilized in glass manufacture, also serves as an abrasive. Both varieties are also utilized to some extent in fire-brick manufacture.

We do not include under this heading such forms of silica as: quartzite, sandstone, flint, tripoli, diatomaceous earth, nor the gem forms of 'rock crystal,' amethyst, and opal. Each of these has various industrial uses, which are treated under their own designations.

The production of silica in California during 1933 amounted to 70,329 short tons valued at \$266,520 f.o.b. rail-shipping point, and came from two properties each in Contra Costa and Inyo counties and one each in El Dorado, Monterey, Orange, Riverside and San Diego counties. The above was an increase in both amount and value as compared with the 1932 output, which was 33,997 tons worth \$136,324. The 1933 output consisted of 68,591 tons of glass sand and 1008 tons of vein and boulder quartz.

The glass sand came from Contra Costa, Monterey, Orange and Riverside counties. For making the higher grades of glass, deposits in Contra Costa County are replacing the sand imported from Belgium. Belgium sand has displaced local material in the manufacture of sodium silicate ('water glass'). There are various deposits of quartz in California which could be utilized for glass making, but to date they have not been so used owing to the cost of grinding and the difficulty of preventing contamination by iron while grinding.

Silica sand has been produced in the following counties of the State: Alameda, Amador, Contra Costa, El Dorado, Imperial, Inyo, Los Angeles, Mariposa, Mono, Monterey, Orange, Placer, Riverside, San Diego, San Joaquin and Tulare, the chief centers being Contra Costa, Amador, Monterey and Los Angeles counties. The industry is of limited importance, so far, because of the fact that much of the available material is not of a grade which will produce first-class colorless glass; for such, it must be essentially iron-free. Even a fractional per cent of iron imparts a green color to the glass.

The Tariff Act of June 21, 1930, placed a duty on sand, containing 95 per cent or more of *Silica* and not more than six-tenths of 1 per cent of oxide of iron and suitable for use in the manufacture of glass, of \$2 per ton.

## Total Silica Production in California.

Total silica production in California since the inception of the industry, in 1899, is shown below, being mainly sand:

Year	Tons	Value	Year	Tons	Value
1899.....	3,000	\$3,500	1917.....	19,376	\$41,166
1900.....	2,200	2,200	1918.....	23,257	88,930
1901.....	5,000	16,250	1919.....	18,659	101,600
1902.....	4,500	12,225	1920.....	25,324	96,793

## SILLIMANITE-ANDALUSITE-CYANITE GROUP

*Bibliography:* State Mineralogist Reports XX, XXIII, XXIV, XXVII. Bulletins 67, 91. Dana's Mineralogy. U. S. Geol. Surv., Prof. Paper 110. U. S. Bureau of Mines, Inform. Circ. 6255. Eng. & Min. Jour.-Press, Vol. 120, pp. 91-94, 1925. Amer. Mineralogist, June, 1924.

Sillimanite and andalusite are both aluminum silicates ( $\text{Al}_2\text{SiO}_5$ ), having the same composition and formula, but with slightly different physical characteristics. Though both crystallize in the orthorhombic system, their crystal habits are different. A massive deposit of andalusite, found in Dry Creek Canyon in the White Mountains of the Inyo Range, in Mono County, is being mined by the Champion Spark Plug Company of Detroit, Michigan. The material is shipped East and utilized in the manufacture of porcelain for automobile spark plugs, for other high-tension electric insulators, laboratory ware and porcelain. Porcelain made from these minerals can be subjected to sudden and extreme changes in temperature without damage.

Cyanite is also an aluminum silicate ( $\text{Al}_2\text{SiO}_5$ ), of the same chemical composition as andalusite and sillimanite, but crystallizing in the triclinic system. A deposit of cyanite is being mined in Imperial County, near Ogilby, and shipments made to a refractory plant in Los Angeles.

Dumortierite, though different somewhat in composition from the above, being a basic aluminum silicate ( $\text{HAl}_5\text{BSi}_3\text{O}_{20}$ ), has proved similar in behavior in ceramic work so that it is now being mixed with andalusite for electrical porcelains. A deposit of this mineral in Nevada is being mined for that purpose. Occurrences of massive dumortierite are known in Imperial and San Diego counties in this State and there may yet be some commercial possibilities for them.

## Total Sillimanite Group Production of California, by Years

## SOAPSTONE and TALC

*Bibliography:* State Mineralogist Reports XII, XIV, XV, XVII-XXVII (inc.). Bulletins 38, 67, 91. U. S. Bur. of Mines, Bulletin 213. Rep. of Investigations, Serial No. 2253, May, 1921.

The total output of talc and soapstone in California during 1933 amounted to 14,451 short tons valued at \$153,668. This was an increase in both quantity and value over the 1932 figures, which were 10,690 tons and \$122,880. Of the 1933 production 12,704 tons were high-grade talc from Inyo and San Bernardino counties, which material was utilized mainly in toilet powders, paint, paper and rubber manufacture, and some in ceramics. The remainder of 1748 tons was soapstone and came from Butte, El Dorado, and Los Angeles counties.

The 'soapstone' grades were used mainly for roofing granules and as a filler in roofing paper, and part also in magnesite cement.

It is reported that California talc has replaced to some extent imported talc in the toilet trade on the basis of quality. The largest production of talc in the United States comes from Vermont and New York, and of massive soapstone from Virginia.

During 1933 imports of talc, steatite, etc., totaled 21,946 short tons valued at \$383,951, as compared with 19,978 tons worth \$357,109 during 1932, according to the United States Bureau of Foreign and Domestic Commerce.

The Tariff Act of 1930 places a duty on talc, steatite or soapstone and French chalk, crude or unground, of one-fourth of one cent per pound.

Talc Production of California, by Years.

Production was intermittent in the State up to 1912; but there has been a material growth since 1916, as shown in the following table:

Year	Tons	Value	Year	Tons	Value
1893.....	400	\$17,750	1915.....	1,663	\$14,750
1894.....			1916.....	1,703	9,831

STRONTIUM

*Bibliography:* State Mineralogist Report XXVI, XXVII. Bulletins 67, 91. U. S. G. S., Bull. 540; 660-I.

There has been no production of strontium minerals in California since 1918, though in that year both celestite ( $\text{SrSO}_4$ ), and the carbonate, strontianite ( $\text{SrCO}_3$ ) were shipped. The first recorded commercial output of strontium minerals in California was in 1916. The occurrence of the carbonate is particularly interesting and valuable, as it appears to be the only considerable deposit of commercial importance so far opened up in the United States. Shipments reported as averaging 80%  $\text{SrCO}_3$  have been made. The deposit is associated with deposits of barite near Barstow, San Bernardino County. The carbonate has also been found in massive form near Shoshone, Inyo County. In addition to Imperial County, celestite is found near Calico and Ludlow, and in the Avawatz Mountains in San Bernardino County, but as yet undeveloped.

Production of strontium minerals in California, by years, has been as follows:

Year	Tons	Value
1916.....	57	\$2,850
1917.....	3,050	37,000
1918.....	2,900	33,000
1919.....		
Totals.....	6,007	\$72,850

## SULPHUR

*Bibliography:* State Mineralogist Reports IV, XIII, XIV, XXV. Bulletins 38, 67, 91.

During 1932-1933 there were shipments of sulphur in California, coming from Alpine and Inyo counties, which totaled 1991 short tons worth \$32,838.

This material was shipped mostly for experimental purposes and tests. The annual details are concealed in the 'Unapportioned' item, so as not to reveal the figures of a single operator. The 1932 production was in excess of the 1929-1931 output, which came from Colusa County, and was utilized in the manufacture of a fertilizer and for dusting for mildew. These were the commercial operations of mining sulphur. The last previous production was in 1923 and 1924 and came from Kern County. This mineral has been found to some extent in Alpine, Colusa, Imperial, Inyo, Kern, Lake, Sonoma, Tehama, and Ventura counties.

#### Total Production of Sulphur in California.

Sulphur was produced at the famous Sulphur Bank mine in Lake County, during the years 1865-1868 (inc.); following which the property became more valuable for its quicksilver. The Elgin quicksilver mine, near Wilbur Springs, Colusa County, is a similar occurrence.

Production of sulphur in California to date:

## WOLLASTONITE

Wollastonite is a calcium metasilicate ( $\text{CaSiO}_3$ ) and usually found in crystalline limestone at the contact with intrusive igneous rocks. It is a white to gray mineral, having a hardness of  $4\frac{1}{2}$  to 5 and a specific gravity of about 2.9.

A deposit is being operated by John T. Thorndyke in the Radamacher District in Kern County, and is being shipped from Code's Siding to Los Angeles, where it is being used to manufacture mineral wool. This is being done by a new process in an electric furnace where the material is melted without the use of a flux and then blown to a fine fiber or wool by compressed air from jets. The mineral wool is an excellent insulating material for sound, heat and cold, and the manufacturer expects to use large quantities in the proposed steel houses. This material, also, can be used in the manufacture of unbreakable glass. This is the first recorded commercial production of wollastonite in California, and apparently also the first in the United States.

## CHAPTER SIX

## SALINES

*Bibliography:* State Mineralogist Reports III, XIV, XV, XVII-XXIX (inc.). Bulletin 24. Spurr and Wormser, "Marketing of Minerals." "Non-Metallic Minerals," by R. B. Ladoo. See also under each substance.

Under this heading are included borax, common salt, soda, potash, and other alkaline salts. The first two have been produced in a number of localities in California, more or less regularly since the early sixties. Except for a single year's absence, soda has had a continuous production since 1894. Potash, magnesium chloride and sulphate, and calcium chloride have been added to the commercial list in recent years, joined in 1926 by bromide, and in 1931 by iodine. The nitrates are still prospective.

Death Valley, looking north from Furnace Creek Ravine, Inyo County.

*Cut by Courtesy of Engineering and Mining Journal.*

Our main resources of salines are the lake beds of the desert regions of Imperial, Inyo, Kern, Los Angeles, San Bernardino, and San Luis Obispo counties, and the waters of the Pacific Ocean.

The total value of this group showed an increase from \$6,135,440 in 1932, to \$8,652,224 in 1933. The following table gives details for the years 1932 and 1933:

Substance	1932		1933		Increase + Decrease — Value
	Amount	Value	Amount	Value	
Borates.....	179,356 tons	\$2,856,470	197,495 tons	\$3,019,513	\$163,043 +
Magnesium salts.....	*	*	2,073 tons	159,660	* +
Salt.....	256,353 tons	918,480	321,312 tons	1,251,024	332,544 +
Soda.....	58,017 tons	826,369	70,598 tons	1,019,130	192,761 +

Total value.....		\$6,135,440		\$8,652,224	
Net increase.....					\$2,516,784

\* Included under "Unapportioned."

<sup>a</sup> Includes bromine, calcium chloride, magnesium salts, potash.

<sup>b</sup> Includes bromine, calcium chloride, iodine, potash.

### BORATES

*Bibliography:* State Mineralogist Reports III, X, XII–XV (inc.), XVII–XXIX (inc.), XXV–XXVII (inc.). Bulletins 24, 67, 91.

During 1933 there was produced in California a total of 191,006 tons of borate materials, compared with 202,950 tons for the year 1932. The material shipped during the year included the new sodium borates, kernite (rasorite), kramerite from Kern County; also crystallized borax prepared by evaporation of brines at Searles Lake in San Bernardino County and Owens Lake in Inyo County.

As the crude ore is not sold as such, but is almost entirely calcined before shipping to the refinery for conversion into the borax of commerce, and because of the fact that the material varied widely in boric acid content, we have recalculated the tonnage to a basis of 40 per cent, A. B. A. This is approximately the average A. B. A. content of the colemanite material after calcining, and also of the crystallized borax obtained from evaporation of the lake brines.

Recalculated as above, the 1933 production totaled 197,495 short tons valued at \$3,019,513. This was an increase both in quantity and value over the 1932 output, which was 179,356 tons worth \$2,856,470.

The total amount of borates exported from the United States<sup>1</sup> during the year 1933 was 87,677 tons valued at \$2,498,035 as compared with 89,641 tons worth \$2,677,626 in 1932.

#### Total Production of Borate Materials in California.

Borax was first discovered in California in the waters of Tusean Springs in Tehama County, January 8, 1856. Borax Lake in Lake County was discovered in September of the same year by Dr. John A. Veach. This deposit was worked in 1864–1868, inclusive, and during that time produced 1,181,365 pounds of refined borax. The bulk of it was exported by sea, to New York. This was the first commercial output of this salt in the United States, and California is still today the leading American producer of borax, having been for many years the sole producer.

Production from the dry lake 'playa' deposits of Inyo and San Bernardino counties began in 1873; but it was not until 1887 that the borax industry was revolutionized by the discovery of the colemanite

<sup>1</sup> Monthly Summary of Foreign Commerce of the United States, Department of Commerce, Dec., 1933, Part 1.

beds at Calico, in San Bernardino County, and later similar beds in Inyo and Los Angeles counties. The colemanite deposits of Ventura County were not worked extensively, owing to lack of transportation facilities. Some production of colemanite has been made from deposits opened up in Clarke County, Nevada. Colemanite was in turn, displaced by the discovery in 1926 of kernite (rasorite) a sodium borate, near Kramer in Kern County.

The total production of borate materials in California is shown in the following table:

Total Production of Borate Materials in California

Year	Tons	Value	Year	Tons	Value

<sup>1</sup> Refined borax.      <sup>2</sup> Recaleulated to 40% 'anhydrous boric acid' equivalent beginning with 1922.

## BROMINE

The first commercial production of bromine and bromine compounds was begun during 1926 by the California Chemical Corporation in its plant at Chula Vista, San Diego County, from salt works bittern waters. This same plant has been recovering magnesium chloride for a number of years. Bromine is also now being made at a similar bittern-water plant at Newark, Alameda County. The 1932 and 1933 outputs and annual details are concealed under the 'Unapportioned' item.

The total commercial production of bromine in California is as follows:

Year	Tons	Value
1926)		
1927)*		
1928)	158	\$120,480
1929)		
1930)*	802	552,933
1931)		
1932)	*	*
1933)		
Totals.....	960	\$673,413

\* Annual details concealed under 'Unapportioned'.

CALCIUM CHLORIDE

*Bibliography:* U. S. Geol. Surv., Min. Res. 1919, Pt. II. Engineering and Contracting, Roads and Streets, monthly issue, Feb. 6, 1924. 'How to Maintain Roads,' manual of instruction of Dow Chemical Company.

Calcium chloride is hygroscopic, that is, it has an affinity for water. This property is taken advantage of by utilizing this salt as a drying agent. During 1933 the production of calcium chloride in California came from a single plant in San Bernardino County. The annual details are concealed under the 'Unapportioned' item to conceal the output of the operator.

Total Calcium Chloride Production in California.

Commercial production of calcium chloride in California was first reported to the State Mining Bureau in 1921, from two plants in San Bernardino County, being obtained as a by-product in the refining of salt from deposits in certain of the desert dry lakes. Total production in California is shown in the following tabulation:

Year	Tons	Value
1921.....	683	\$22,980
1922)*

1933)	3,103	15,500
Totals.....	71,881	\$1,120,001

\* Annual details concealed under 'Unapportioned.'

IODINE

*Bibliography:* U. S. Bureau of Mines I. C. 6387.

Iodine was first produced in California during 1917 to 1921 as a by-product of potash which was reduced from kelp in an experimental station of U. S. Department of Agriculture at Summerland, but after

the armistice the demand for these minerals decreased so that the plants in Santa Barbara County closed. In 1929 the General Salt Company erected a plant which reduces iodine from the waste waters of certain deep oil wells in the Long Beach field. This plant was shut down during 1932, but resumed operation during 1933. In addition to this company's activity, there were two new plants in production. The annual details are concealed under the 'Unapportioned' item, so as not to reveal the output of any of the operators.

The total production of 1929, 1931 and 1933 combined, in California was 696,297 pounds of iodine worth \$1,374,311.

#### MAGNESIUM SALTS

*Bibliography:* State Mineralogist Reports XX, XXI, XXV-XXVI (inc.). Bulletin 91. 'Dictionary of Applied Chemistry,' by Thorpe. U. S. Geol. Surv., Min. Res. of P. S.

During 1933 there was an output of magnesium salts in California coming from one plant in San Diego County and two in San Mateo County, amounting to 2073 short tons worth \$159,660. This was the chloride and the carbonate. The chloride was nearly all sold for use in magnesite stucco and cement mixtures (Sorel cement), also some for road liquor. The carbonate, a bulky white powder, was used as a heat-insulating material, as a filler for rubber, paper, paint, etc., and in medicines, in tooth paste, in face powder and as a polish for metal and glass. The sulphate marketed was utilized for medicinal and bath purposes. The material coming from San Diego County was residual bitterns from the salt plants and was in part marketed in the liquid form carrying from 35 per cent to 67 per cent  $MgCl_2$  and in part as dry crystals, while that from San Mateo County was magnesium carbonate.

The average value reported for the chloride produced in California in 1933 was approximately \$30 per ton, f.o.b. plant.

#### Total Production of Magnesium Salts in California.

Commercial production of magnesium chloride in California was begun in 1916 by some of the salt companies, from the residual bitterns obtained during the evaporation of sea water for its sodium chloride. In addition, some magnesium sulphate, or 'epsom salts' is also made, annually, but in smaller amount, and magnesium carbonate by a patented process, direct from sea water.

The total production of magnesium salts in California, since the beginning of the industry here, is shown in the following tabulation:

Year	Tons	Value
1916.....	851	\$6,407
1917.....	1,064	34,973

### NITRATES

*Bibliography:* State Mineralogist Reports XV, XXV, XXVI, XXVII. Bulletins 24, 67, 91. U. S. G. S., Press Bulletin No. 373, July, 1918. Smithsonian Inst., Publ. No. 2421, 1916.

Nitrates of sodium, potassium and calcium have been found in various places in the desert regions of the State, but no deposit of commercial value has been developed as yet. It is hoped that a closer search may some day be rewarded by workable discoveries. At present the principal commercial source of nitrates is the Chilean saltpeter (sodium nitrate) deposits in South America.

The fixation of atmospheric nitrogen electrically has been accomplished successfully in Germany and Scandinavia. The possibilities of cheap hydro-electric power in California make the subject one of interest to us, as we have also the natural raw materials and chemicals to go with the power. Sodium and potassium cyanides can be made by fixation of atmospheric nitrogen electrically.

### POTASH

*Bibliography:* State Mineralogist Reports XV, XVIII, XX, XXII, XXV, XXVII (inc.). Bulletins 24, 67, 91. U. S. G. S., Min. Res. 1913, 1914, 1915. Senate Doc. No. 190, 62 Congress, 2d Session. Mining & Sci. Press, Vol. 112, p. 155; Vol. 114, p. 789. Eng. & Min. Jour.-Press, Vol. 117, p. 557, Apr. 5, 1924.

The 1933 production of potash in California came from a single operator in San Bernardino County, the details of which are concealed under the 'Unapportioned' item. This was principally chloride and the product averaged 60% equivalent  $K_2O$  content. The material was sold mainly for fertilizer manufacture.

Imports of crude potash minerals and salts into the United States during 1933, according to the U. S. Bureau of Foreign and Domestic

Commerce, amounted to 406,015 long tons valued at \$9,238,099 compared with 256,230 long tons worth \$5,708,588 in 1932. These materials consisted mainly of 'manure salts,' crude chloride (muriate) and sulphate, and kainite, all of which are admitted duty free.

Quotations have recently ranged from \$35 per ton c.i.f. Atlantic and Gulf ports for high-grade sulphate (90%–95%), \$22.50 per ton for muriate (80%–85%), and \$16 for manure salts (30%).

#### Total Production of Potash in California.

Potash production began commercially in California in 1914, with a small yield from kelp. The bulk of the output comes from deposits of potash-bearing residues and brines in the old lake beds of the desert regions, particularly Searles Lake, San Bernardino County. A small amount has been made from salt-works bitterns, and for a time there was some from Portland cement dust. Some also has been obtained from molasses distillery-slops char.

The annual amounts and value of these potash materials, since their beginning in California in 1914, have been as follows:

<i>Year</i>	<i>Tons</i>	<i>Value</i>
1914	10	\$460
1915	1076	19,391
1916	17,808	663,605
1917	129,022	4,202,889
1918	49,381	6,808,976
1919	28,118	2,415,963
1920	26,298	1,465,463
1921	14,806	390,210
1922	17,776	584,388
1923	29,597	709,836
1924	33,107	747,407
1925	36,355	829,770
1926	32,884	812,285

#### SALT

*Bibliography:* State Mineralogist Reports II, XII–XV (inc.), XVII–XXIII (inc.), XXV–XXVII. Bulletins 24, 67, 91. U. S. Geol. Survey, Bull. 669. U. S. Bur. of Mines, Bull. 146.

Most of the salt production in California is obtained by evaporation of water of the Pacific Ocean, plants being located on the shores of San Francisco, Monterey, and San Diego bays, and at Long Beach. Additional amounts are derived from lakes and lake beds in the desert regions (in part, rock salt), mainly in Inyo, Kern, and San Bernardino counties, and evaporation of alkaline lake water in Modoc County. A small amount of valuable medicinal salts has been obtained by evaporation of the water of Lake Mono, Mono County.

During 1933 in California there was an output of 321,312 short tons of salt worth \$1,251,024, compared with 256,353 tons worth \$918,480 in 1932. There were nine plants operating in 1933, two each in Alameda and San Bernardino counties, and one each in Kern, Los Angeles, Modoc, San Diego, and San Mateo counties.

The average value reported for salt produced in California during 1933 was \$3.89 per ton f.o.b. plant, as compared with \$3.58 in 1932, \$3.73 in 1931, \$3.36 in 1930, and \$6.80 in 1929.

#### Production of Salt in California, by Years.

Amount and value of annual production of salt in California from 1887 is shown in the following tabulation:

Year	Tons	Value	Year	Tons	Value
1887.....	28,000	\$112,000	1911.....	173,332	\$324,255

#### SODA

*Bibliography:* State Mineralogist Reports XII, XIII, XV, XVII, XVIII, XXX, XXII, XXIII, XXV-XXIX (inc.). Bulletins 24, 67, 91. U. S. Geol. Surv., Bull. 717.

The production of sodium salts in California in 1933 included: Soda ash, trona, caustic soda and bicarbonate from plants at Owens Lake, Inyo County, and trona ('sesqui-carbonate,' a double salt of  $\text{Na}_2\text{CO}_3$  and  $\text{Na}_2\text{CO}_3$  and  $\text{NaHCO}_3$ ) from Searles Lake, San Bernardino County. There were no shipments of salt cake (sulphate) from the Carrizo Plains, San Luis Obispo County. The output of the year amounted to 70,598 short tons valued at \$1,019,130, compared with the 1932 figures of 58,017 tons and \$826,369.

The dense ash and bicarbonate were used mainly in the manufacture of soap, glass, paper, oil refining, sugar refining, and chemicals; and the trona for metallurgical purposes.

Soda Production of California, by Years.

The total output, showing amount and value of these materials in California since the inception of the statistical records of the State Mining Bureau, is given in the table which follows:

Year	Tons	Value	Year	Tons	Value
1894.....	1,530	\$20,000	1915.....	5,799	\$83,485
1895.....	1,900	47,500	1916.....	10,593	264,825

## CHAPTER SEVEN

## BY COUNTIES

## Introductory.

The State of California includes a total area of 158,297 square miles, of which 155,652 square miles are of land. The maximum width is 235 miles, the minimum 148 miles, and the length from the northwest corner to the southeast corner is 775 miles. The State is divided into fifty-eight counties. The 1930 census figures show a total population for California of 5,672,009. Minerals of commercial value exist in every county, and during 1933 some active production was reported to the State Division of Mines from all of the fifty-eight. In 1932, but one county was lacking.

## Rank of Counties in Mineral Yield, 1933.

Of the ten leading counties in point of total value of output for 1933, the first five, viz, Los Angeles, Kern, Kings, Orange and Ventura, also Santa Barbara (seventh) and Fresno (ninth) owe their position to petroleum and natural gas. Los Angeles, due to crude oil, leads all other counties. In 1933 it was credited with 30% of the State's total value, having passed Kern in 1923, which led the State for many years. San Bernardino (sixth) owes its position to cement, borates, and potash; Nevada (eighth), and Sacramento (tenth) to gold.

<i>County</i>	<i>Value</i>	<i>County</i>	<i>Value</i>
1 Los Angeles	\$68,785,294	31 Placer	\$293,866
2 Kern	27,877,930	32 Tuolumne	264,979
3 Kings	25,474,252	33 San Benito	247,479
4 Orange	19,263,581	34 Napa	209,542
5 Ventura	14,558,096	35 Marin	205,150
6 San Bernardino	8,975,485	36 Tulare	178,613
7 Santa Barbara	7,011,773	37 Imperial	166,858
8 Nevada	4,767,391	38 Modoc	166,747
9 Fresno	3,901,103	39 Sonoma	157,988
10 Sacramento	3,172,763	40 San Joaquin	153,127
11 Riverside	2,218,738	41 Lake	134,851
12 Amador	2,028,598	42 Madera	133,105
13 Alameda	1,930,111	43 Plumas	131,150
14 San Mateo	1,569,480	44 Monterey	114,040
15 Santa Cruz	1,234,180	45 Mono	81,147
16 Contra Costa	1,231,971	46 Humboldt	71,051
17 Yuba	1,150,962	47 San Luis Obispo	55,914
18 Shasta	1,113,395	48 Lassen	45,739
19 Inyo	1,014,713	49 Tehama	30,334
20 Calaveras	938,981	50 Mendocino	35,283
21 El Dorado	920,747	51 Solano	16,996
22 Merced	766,014	52 Yolo	16,823
23 San Diego	620,881	53 Alpine	12,724
24 Mariposa	575,118	54 Sutter	11,900
25 Santa Clara	534,378	55 Glenn	11,690
26 Sierra	449,146	56 Colusa	8,896
27 Butte	404,661	57 San Francisco	7,734
28 Siskiyou	374,178	58 Del Norte	3,062
29 Trinity	359,503		
30 Stanislaus	298,847	Total	\$206,489,058

There were nineteen counties, each having a mineral production in excess of a million dollars in 1933. Petroleum was an important item in seven; cement in five; natural gas and gold in four each; miscellaneous stone and borates in two each; potash, soda and diatomite in one each. In point of variety and diversity, San Bernardino County

led all others in 1933, with a total of twenty-four different mineral products on the commercial list, followed by Inyo and Los Angeles with nineteen each; Kern with eighteen; San Diego with fourteen; Fresno and Riverside with thirteen each; Butte with twelve; El Dorado, Monterey, Orange, Placer and Santa Barbara with eleven each; Amador and Ventura with ten each.

ALAMEDA

*Land area:* 732 square miles.  
*Population:* 475,153 (1930 census).  
*Location:* East side of San Francisco Bay.  
*County seat:* Oakland.  
*References:* State Mineralogist Report XVII: XVIII: XX: XXVI (Oct. 1929).

Alameda County, while in no sense one of the ‘mining counties,’ came thirteenth on the list of counties as to value, with a mineral production for 1933 worth \$1,930,111, and having nine different substances. This was an increase from the 1932 output, which was valued at \$1,765,139.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Brick and hollow building tile-----	-----	\$179,152
Clay (pottery) -----	4,101 tons	3,946
Stone, miscellaneous -----	-----	649,105
Other minerals*-----	-----	1,097,908
Total value -----	-----	\$1,930,111

\* Includes lime, limestone (shells) pyrite, salt, and mineral paint.

ALPINE

*Land area:* 776 square miles.  
*Population:* 236 (1930 census).  
*Location:* On eastern border of State, south of Lake Tahoe.  
*County seat:* Markleeville.  
*References:* State Mineralogist Report XV:XVII:XVIII, XXVII (Oct., 1931).

Alpine County ranked fifty-third in value of output for 1933, which was \$12,724, compared with \$1,995 in 1932.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	323 lbs.	\$21
Gold -----	-----	1,651
Lead -----	1,169 lbs.	43
Silver -----	3,118 fine ozs.	1,091
Unapportioned -----	-----	9,918
Total value -----	-----	\$12,724

AMADOR

*Land area:* 601 square miles.  
*Population:* 8494 (1930 census).  
*Location:* East-central part of State—Mother Lode District.  
*County seat:* Jackson.  
*References:* State Mineralogist Report XIV: XVII: XVIII: XIX: XX: XXIII (April, 1927).

Amador County ranked twelfth as to value of mineral output for 1933, with ten different minerals worth \$2,028,598, compared with \$1,400,286 for 1932. The increase was due to gold.

Amador at one time led the State in gold production, though exceeded in 1920-1923 and in 1926-1927 by Yuba and Nevada counties, but in 1925 and 1928 by Yuba only, in 1929-1930 by Nevada only, and in 1931-1933 by Nevada and Sacramento.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery)-----	18,341 tons	\$26,016
Copper-----	13,922 lbs.	891
Gold-----	-----	1,945,261
Lead-----	31,845 lbs.	1,178
Silver-----	18,489 oz.	6,471
Other minerals*-----	-----	48,781
Total-----	-----	\$2,028,598

\* Includes brick, coal, marble, miscellaneous stone.

### BUTTE

*Land area:* 1722 square miles.

*Population:* 34,010 (1930 census).

*Location:* North-central portion of state.

*County seat:* Oroville.

*References:* State Mineralogist Report XV: XVII: XVIII: XXIV (July, 1928): XXVI (Oct., 1930).

Butte County ranks twenty-seventh in California as regards to value of mineral output in 1933, with eleven mineral substances having a total value of \$404,661 as compared with \$464,572 in 1932.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper-----	1,133 lbs.	\$73
Gold-----	-----	296,159
Silver-----	2,774 oz.	971
Miscellaneous stone-----	-----	98,992
Unapportioned*-----	-----	8,466
Total-----	-----	\$404,661

\* Includes gems (diamonds) lead, mineral water, natural gas, platinum, soapstone.

### CALAVERAS

*Land area:* 1027 square miles.

*Population:* 6009 (1930 census).

*Location:* East-central portion of state—Mother Lode District.

*County seat:* San Andreas.

*References:* State Mineralogist Report XIV: XVII: XVIII: XIX: XX: XXI (April, 1925).

Calaveras County ranked twentieth in California in regard to value of mineral output in 1933 with \$938,981 value as against \$735,199 in 1932. The increase was due to gold.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper-----	2,248 lbs.	\$144
Gold-----	-----	442,980
Lead-----	6,363 lbs.	235
Silver-----	5,505 fine oz.	1,927
Miscellaneous stone-----	-----	46,436
Unapportioned-----	-----	447,259
Total-----	-----	\$938,981

Amador County ranked twelfth as to value of mineral output for 1933, with ten different minerals worth \$2,028,598, compared with \$1,400,286 for 1932. The increase was due to gold.

Amador at one time led the State in gold production, though exceeded in 1920-1923 and in 1926-1927 by Yuba and Nevada counties, but in 1925 and 1928 by Yuba only, in 1929-1930 by Nevada only, and in 1931-1933 by Nevada and Sacramento.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery)-----	18,341 tons	\$26,016
Copper-----	13,922 lbs.	891
Gold-----	-----	1,945,261
Lead-----	31,845 lbs.	1,178
Silver-----	18,489 oz.	6,471
Other minerals*-----	-----	48,781
Total-----	-----	\$2,028,598

\* Includes brick, coal, marble, miscellaneous stone.

### BUTTE

*Land area:* 1722 square miles.

*Population:* 34,010 (1930 census).

*Location:* North-central portion of state.

*County seat:* Oroville.

*References:* State Mineralogist Report XV: XVII: XVIII: XXIV (July, 1928): XXVI (Oct., 1930).

Butte County ranks twenty-seventh in California as regards to value of mineral output in 1933, with eleven mineral substances having a total value of \$404,661 as compared with \$464,572 in 1932.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper-----	1,133 lbs.	\$73
Gold-----	-----	296,159
Silver-----	2,774 oz.	971
Miscellaneous stone-----	-----	98,992
Unapportioned*-----	-----	8,466
Total-----	-----	\$404,661

\* Includes gems (diamonds) lead, mineral water, natural gas, platinum, soapstone.

### CALAVERAS

*Land area:* 1027 square miles.

*Population:* 6009 (1930 census).

*Location:* East-central portion of state—Mother Lode District.

*County seat:* San Andreas.

*References:* State Mineralogist Report XIV: XVII: XVIII: XIX: XX: XXI (April, 1925).

Calaveras County ranked twentieth in California in regard to value of mineral output in 1933 with \$938,981 value as against \$735,199 in 1932. The increase was due to gold.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper-----	2,248 lbs.	\$144
Gold-----	-----	442,980
Lead-----	6,363 lbs.	235
Silver-----	5,505 fine oz.	1,927
Miscellaneous stone-----	-----	46,436
Unapportioned-----	-----	447,259
Total-----	-----	\$938,981

**COLUSA**

*Land area:* 1140 square miles.

*Population:* 10,257 (1930 census).

*Location:* Sacramento Valley.

*County seat:* Colusa.

*References:* State Mineralogist Report XIV: XVII: XVIII: XXV (April, 1929).

Colusa County ranks fifty-six in regard to the value of mineral output in 1933 with five different mineral substances worth \$8,896 as compared with \$38,053 in 1932.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Value</i>
Gold -----	\$57
Other minerals *-----	8,839
Total -----	\$8,896

\* Includes mineral water, petroleum, quicksilver, miscellaneous stone.

**CONTRA COSTA**

*Land area:* 714 square miles.

*Population:* 78,554 (1930 census).

*Location:* East side of San Francisco Bay.

*County seat:* Martinez.

*References:* State Mineralogist Report XVII: XVIII: XXIII (Jan., 1927).

Contra Costa County stands sixteenth on the list in respect to value of mineral output for 1933, with seven different substances worth \$1,231,971, as compared with \$1,013,993 in 1932.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Value</i>
Brick and hollow building tile-----	\$268,235
Stone, miscellaneous-----	322,483
Other minerals*-----	641,253
Total value -----	\$1,231,971

\* Includes cement, clay (pottery), mineral water, glass sand.

**DEL NORTE**

*Land area:* 1024 square miles.

*Population:* 4734 (1930 census).

*Location:* Extreme northwest corner of state.

*References:* State Mineralogist Report XIV: XVII: XXI (July, 1925). XXIX (Jan.-April, 1933).

Del Norte County was in fifty-eighth place as a mineral producing county for 1933, with four different substances worth \$3,062 as compared with \$25,801 in 1932.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$1,933
Silver -----	9 fine oz.	3
Other minerals*-----	-----	1,126
Total value -----	-----	\$3,062

\* Includes platinum and miscellaneous stone.

## EL DORADO

*Land area:* 1753 square miles.

*Population:* 8303 (1930 census).

*Location:* East-central portion of the state, northernmost of the Mother Lode counties.

*County seat:* Placerville.

*References:* State Mineralogist Report XV: XVII: XVIII: XIX: XX: XXII (Oct., 1926).

El Dorado County, which contains the location where gold in California was first heralded to the world, comes twenty-first on the list of counties ranked according to value for 1933, with eleven different mineral substances worth \$920,747. In addition to the segregated figures here given, a large tonnage of limestone is annually shipped for use in cement manufacture, the value being included in the state's total for cement. The 1932 output was valued at \$549,902. Gold accounts for the increase.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	2,755 lbs	\$176
Gold -----	-----	540,939
Limestone -----	120,026 tons	208,049
Silver -----	4,165 fine oz.	1,458
Stone, miscellaneous -----	-----	7,551
Other minerals* -----	-----	90,586
Total value -----	-----	\$920,747

\* Includes lead, lime, quartz, slate, soapstone.

## FRESNO

*Land area:* 5950 square miles.

*Population:* 144,369 (1930 census).

*Location:* South-central portion of state.

*County seat:* Fresno.

*References:* State Mineralogist Report XIV: XVII: XVIII: XXV (July, 1929).

Fresno County, ninth in importance as a mineral producer among the counties of California, reports an output for 1933 of thirteen different mineral substances, with a total value of \$3,901,103, as compared with the 1932 value of \$3,744,391.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$19,459
Natural gas -----	18,807,454 M cu. ft.	1,191,237
Petroleum -----	4,516,246 bbls.	2,586,906
Quicksilver -----	34 flasks	1,541
Silver -----	137 fine oz.	48
Stone, miscellaneous -----	-----	59,363
Other minerals* -----	-----	42,549
Total value -----	-----	\$3,901,103

\* Includes brick and hollow-building tile, clay (pottery), diatomite, granite, gypsum, limestone.

## GLENN

*Land area:* 1259 square miles.

*Population:* 10,935 (1930 census).

*Location:* West side of Sacramento Valley.

*County seat:* Willows.

*References:* State Mineralogist Report XIV: XVII: XVIII.

Glenn County stands fifty-fifth as a mineral producing county of the state for 1933 and owes its position mainly to the presence of large deposits of sand and gravel, much of which is used as railroad ballast.

Commercial production for 1933 was as follows, being an increase over \$8,714 for the previous year:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous-----	\$11,690

## HUMBOLDT

*Land area:* 3634 square miles.

*Population:* 43,189 (1930 census).

*Location:* Northwestern portion of state, bordering on Pacific Ocean.

*County seat:* Eureka.

*References:* State Mineralogist Report XIV: XVII: XVIII: XXI (July, 1925).

Humboldt County ranks forty-sixth in the value of its mineral output among the counties of the state for 1933 with six different mineral substances valued at \$71,051, compared with the 1932 output worth \$117,475.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$5,902
Silver -----	30 fine oz.	11
Stone, miscellaneous -----	-----	65,012
Other minerals*-----	-----	126
Total value-----	-----	\$71,051

\* Includes copper and natural gas.

## IMPERIAL

*Land area:* 4089 square miles.

*Population:* 60,894 (1930 census).

*Location:* Extreme southeast corner of the state.

*County seat:* El Centro.

*References:* State Mineralogist Report XIV: XVII: XVIII: XIX: XX: XXII (April, 1926).

Imperial County ranked thirty-seventh in total value of mineral output for 1933, with nine different mineral substances valued at \$166,858, compared with the 1932 output worth \$251,727.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$6,293
Silver -----	218 fine oz.	76
Stone, miscellaneous -----	-----	86,962
Other minerals*-----	-----	73,527
Total value-----	-----	\$166,858

\* Includes carbon dioxide gas, clay (pottery), gypsum, mica, cyanite.

### INYO

*Land area:* 10,019 square miles.

*Population:* 6557 (1930 census).

*Location:* Lies on eastern border of state, north of San Bernardino County.

*County seat:* Independence.

*References:* State Mineralogist Report XV: XVII: XVIII: XX: XXII (Oct., 1926), XXVII.

Inyo County mineral output for 1933 reached a total value of \$1,014,913, having nineteen different mineral substances and standing nineteenth among the counties of the State as to value of production. The 1932 output was worth \$724,023.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	7,940 lbs.	\$508
Dolomite -----	48,487 tons	164,987
Gold -----	-----	62,312
Lead -----	601,135 lbs.	22,241
Pumice and volcanic ash -----	894 tons	4,150
Silver -----	20,949 fine oz.	7,332
Stone, miscellaneous -----	-----	18,096
Zinc -----	255,944 lbs.	10,741
Other minerals* -----	-----	724,346
Total value -----	-----	\$1,014,913

\* Includes bentonite, borates, clay (pottery), molybdenite, silica (quartz), slate, talc, sulphur, soda, tungsten.

### KERN

*Land area:* 8003 square miles.

*Population:* 82,219 (1930 census).

*Location:* South-central portion of state.

*County seat:* Bakersfield.

*References:* State Mineralogist Report XIV: XVII: XVIII: XIX: XX: XXV (Jan., 1929), XXIX (July-Oct., 1933.)

Kern County, because of its immensely productive oil fields, for many years stood preeminent among all counties of California in the value of its mineral output. It was surpassed by Los Angeles and Orange counties in 1923, but by Los Angeles only in 1924-1933, for which petroleum is responsible. The 1933 production consisted of eighteen different mineral substances, valued at \$27,877,930, compared with the 1932 output worth \$28,069,925.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$424,376
Copper -----	760 lbs.	49
Natural gas -----	20,571,398 M cu. ft.	916,090
Petroleum -----	35,349,272 bbls.	23,521,406
Silver -----	39,909 fine oz.	13,968
Stone, miscellaneous -----	-----	70,931
Other minerals* -----	-----	2,931,110
Total value -----	-----	\$27,877,930

\* Includes bentonite borates, brick, cement, clay (pottery), gems, lead, volcanic ash, quicksilver, salt, wollastonite.

Glory hole at the Rand level of the Yellow Aster Mine, at Randsburg, Kern County.

### KINGS

*Land area:* 1559 square miles.

*Population:* 25,277 (1930 census).

*Location:* South-central portion of the state.

*County seat:* Hanford.

*References:* State Mineralogist Report XIV: XVII: XVIII: XXVI (Oct., 1930).

Kings County advanced from ninth position in 1929 to seventh in value of mineral production for 1930, and third for 1931–1933, accounted for by the bringing in of further oil wells at Kettleman Hills, which began commercial yield in 1928.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Natural gas-----	104,893,813 M cu. ft.	\$5,216,344
Petroleum-----	21,663,622 bbls.	20,253,320
Unapportioned-----	-----	4,588
Total value-----	-----	\$25,474,252

### LAKE

*Land area:* 1278 square miles.

*Population:* 7166 (1930 census).

*Location:* About fifty miles north of San Francisco Bay and the same distance inland from the Pacific Ocean.

*County seat:* Lakeport.

*References:* State Mineralogist Report XIV: XVII: XVIII: XX: XXV (July, 1929).

Lake County was in forty-first place as to the value of mineral output for 1933 with five different mineral substances worth \$134,851, as compared with \$97,084 for 1932.

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Mineral water-----	11,799 gal.	\$11,177
Quicksilver-----	1,610 flasks	90,592
Stone, miscellaneous-----	----	32,052
Unapportioned-----	----	30
Total value-----		\$134,851

### LASSEN

*Land area:* 4531 square miles.

*Population:* 12,587 (1930 census).

*Location:* Northeast portion of state.

*County seat:* Susanville.

*References:* State Mineralogist Report XV: XVII: XVIII: XIX: XXV (Jan., 1929).

Lassen County in forty-eighth place as a mineral producer for 1933 was as follows, being a decrease from \$109,568, which was the value for the previous year:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	----	\$8,309
Silver-----	194 fine oz.	68
Stone, miscellaneous-----	----	35,228
Other minerals *-----	----	2,094
Total value-----		\$45,739

\* Includes copper, granite, lead.

### LOS ANGELES

*Land area:* 4067 square miles.

*Population:* 2,201,526 (1930 census).

*Location:* One of the southwestern coast counties.

*County seat:* Los Angeles.

*References:* State Mineralogist Report XV: XVII: XVIII: XIX: XX: XXIII (July, 1927).

The mineral production for Los Angeles County for the year 1933 amounted in value to \$68,785,294, as compared with the 1932 output worth \$76,721,115. This accounted for 30% of the entire state's total for 1933 and ranks Los Angeles first in the state as a mineral producer, having in 1923 passed Kern County, which had been leading for several years previously.

Commercial production for 1933, consisting of nineteen substances, was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Brick-----	40,100 M	\$639,854
Building tile (hollow)-----	3,410 tons	19,832
Clay (pottery)-----	14,195 tons	10,142
Copper-----	808 lbs.	52
Gold-----	----	15,861
Lead-----	2,006 lbs.	74
Mineral water-----	6,672,359 gal.	335,310
Natural gas-----	70,490,726 M cu. ft.	4,957,928
Petroleum-----	67,299,626 bbls.	60,023,645
Sandstone-----	----	8,725
Silver-----	337 fine oz.	118
Stone, miscellaneous-----	----	1,841,946
Other minerals *-----	----	931,807
Total value-----		\$68,785,294

\* Includes cement (see San Bernardino County), diatomite, dolomite, graphite, iodine, salt, soapstone.

**MADERA**

*Land area:* 2112 square miles.

*Population:* 17,152 (1930 census).

*Location:* East-central portion of state.

*County seat:* Madera.

*References:* State Mineralogist Report XIV : XVII : XVIII : XXIV (Oct., 1928).

Madera County was in forty-second place, as a mineral producer, for 1933, with an output of five different substances valued at \$133,105 compared with \$298,021 for 1932. The decrease was due to granite.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$8,962
Copper -----	496 lbs.	32
Lead -----	5,442 lbs.	210
Silver -----	2,034 fine oz.	712
Other minerals * -----	-----	123,198
Total value -----		\$133,105

\* Includes granite, miscellaneous stone, volcanic ash.

**MARIN**

*Land area:* 529 square miles.

*Population:* 41,635 (1930 census).

*Location:* Adjoins San Francisco on the north.

*County seat:* San Rafael.

*References:* State Mineralogist Report XIV : XVII : XVIII : XXII (July, 1926).

Marin County in thirty-fifth place as to the value of mineral output for 1933, with five substances, had a commercial production, which was as follows:

<i>Substance</i>	<i>Value</i>
Unapportioned * -----	\$205,150

\* Includes brick, clay (pottery), mineral water, miscellaneous stone.

**MARIPOSA**

*Land area:* 1453 square miles.

*Population:* 2530 (1930 census).

*Location:* Most southerly of the Mother Lode counties. East-central portion of State.

*County seat:* Mariposa.

*References:* State Mineralogist Report XIV : XVII : XVIII : XIV (April, 1928).

Mariposa County is one of the distinctly "mining" counties of the state, although it stands but twenty-fourth on the list of counties in regard to the value of its mineral output for 1933 with a total of \$575,118, as compared with \$379,254 for 1932. Mariposa County is also the source of a large tonnage of limestone, annually, which is otherwise credited to cement manufacture in Merced County.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$254,663
Silver -----	3,177 fine oz.	1,112
Stone, miscellaneous -----	-----	280,016
Other minerals * -----	-----	39,327
Total value -----	-----	\$575,118

\* Includes barytes, copper, granite.

### MENDOCINO

*Land area:* 3453 square miles.

*Population:* 23,491 (1930 census).

*Location:* Joins Humboldt County on the south and bounded by the Pacific Ocean on the west.

*County seat:* Ukiah.

*References:* State Mineralogist Report XIV: XVII: XVIII: XIX: XX.

Mendocino County's mineral output for 1933 was valued at \$35,283, which ranked it as fiftieth among the counties of the State as a mineral producer compared with \$101,669 for 1932. Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Value</i>
Gold -----	\$155
Stone, miscellaneous -----	35,010
Other minerals * -----	118
Total value -----	\$35,283

\* Includes limestone and natural gas.

### MERCED

*Land area:* 1995 square miles.

*Population:* 36,900 (1930 census).

*Location:* About the geographical center of the state.

*County seat:* Merced.

*References:* State Mineralogist Report XIV: XVII: XVIII: XXI (April, 1925).

Merced County ranks twenty-second as to the value of mineral output for 1933, with seven different substances worth \$766,014, compared with \$749,742 for 1932.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$451,023
Silver -----	1,744 fine oz.	610
Stone, miscellaneous -----	-----	13,875
Other minerals * -----	-----	300,506
Total value -----	-----	\$766,014

\* Includes cement, gypsum, platinum.

## MODOC

*Land area:* 3823 square miles.

*Population:* 8038 (1930 census).

*Location:* The extreme northeast corner of the state.

*County seat:* Alturas.

*References:* State Mineralogist Report XV: XVII: XVIII: XXV (Jan., 1929).

Modoc County in thirty-eighth place, with four different substances, reported commercial production for 1933 as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$1,346
Silver -----	37 fine oz	13
Stone, miscellaneous -----	-----	164,614
Unapportioned -----	-----	774
Total value -----	-----	\$166,747

Standard Consolidated's Mill at Bodie, Mono County.

*Cut by Courtesy of Engineering and Mining Journal.*

## MONO

*Land area:* 3030 square miles.

*Population:* 1359 (1930 census).

*Location:* Is bordered by the state of Nevada on the east and is about in the central portion of the state measured on a north and south line.

*County seat:* Bridgeport.

*References:* State Mineralogist Report XV: XVII: XVIII: XX: XXIII (Oct., 1927).

Mono County in forty-fifth place with eight different mineral substances, reported commercial production for 1933 as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	665 lbs.	\$43
Gold -----	-----	33,378
Lead -----	5,583 lbs.	170
Silver -----	2,869 fine oz.	1,004
Stone, miscellaneous -----	-----	20,354
Unapportioned * -----	-----	26,198
Total value -----	-----	\$81,147

\* Includes pumice and andalusite.

## MONTEREY

*Land area:* 3330 square miles.

*Population:* 53,668 (1930 census).

*Location:* West-central portion of state, bordering on Pacific Ocean.

*County seat:* Salinas.

*References:* State Mineralogist Report XV: XVII: XVIII: XIX: XXI (Jan., 1925).

Monterey County produced eleven different mineral substances during 1933, having a total value of \$114,040, as compared with \$166,297 for 1932.

In forty-fourth place, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Value</i>
Gold -----	\$195
Stone, miscellaneous -----	64,107
Other minerals * -----	49,738
Total value -----	\$114,040

\* Includes clay (pottery), coal, diatomite, dolomite, natural gas, quicksilver, silica (glass sand).

## NAPA

*Land area:* 783 square miles.

*Population:* 22,832 (1930 census).

*Location:* Directly north of San Francisco Bay—one of the 'bay counties.'

*County seat:* Napa.

*References:* State Mineralogist Report XIV: XVII: XVIII:XX: XXV (April, 1929).

In 1933 the value of Napa County's mineral output was \$209,542, placing it in thirty-fourth place in the list of counties, as compared with \$169,633 for 1932.

With five different mineral substances, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Mineral water -----	15,237 gal.	\$9,940
Quicksilver -----	842 flasks	47,059
Stone, miscellaneous -----	----	142,143
Other minerals * -----	----	10,400
Total value -----		\$209,542

\* Includes pumice and sandstone.

## NEVADA

*Land area:* 974 square miles.

*Population:* 10,589 (1930 census).

*Location:* North of Lake Tahoe, on the eastern border of the state.

*County seat:* Nevada City.

*References:* State Mineralogist Report XVI: XVII: XVIII: XIX: XX: XXVI (April, 1930).

Nevada, one of the mountain counties of California, for some years alternated with Amador in the gold lead, but both were passed by Yuba in 1918-1921, also 1923. In 1922, 1924, 1929 to 1933, Nevada led all

counties in gold output, but it held third place in 1925 and 1928, and second place in 1926 and 1927. Nevada County stands ninth on the list of counties in regard to value of its mineral output for 1933, with eight substances worth \$4,767,391, as compared with \$3,704,103 for 1932. The increase was due mainly to advance in the price of gold.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper -----	67,179 lbs.	\$4,299
Gold -----		4,676,357
Lead -----	72,380 lbs.	2,678
Silver -----	160,311 fine oz.	56,109
Stone, miscellaneous -----		24,400
Zinc -----	34,478 lbs.	1,448
Unapportioned -----		2,100
Total value -----		\$4,767,391

### ORANGE

*Land area:* 795 square miles.

*Population:* 118,611 (1930 census).

*Location:* Southwestern portion of state, bordering Pacific Ocean.

*County seat:* Santa Ana.

*References:* State Mineralogist Report XV: XVII: XVIII: XIX: XX: XXI (Jan., 1925).

Orange County in fourth place as to the value of mineral output for 1933, produced eleven mineral substances, worth \$19,263,581, as compared with the 1932 output valued at 14,182,245.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery) -----	13,486 tons	\$49,762
Gold -----		105
Natural gas -----	13,669,899 M cu. ft.	912,317
Petroleum -----	22,046,475 bbls.	18,239,049
Silver -----	2 fine oz.	1
Stone, miscellaneous -----		46,340
Other minerals * -----		16,007
Total value -----		\$19,263,581

\* Includes brick, mineral water, quicksilver, silica (glass sand).

### PLACER

*Land area:* 1395 square miles.

*Population:* 24,442 (1930 census).

*Location:* Eastern border of state directly west of Lake Tahoe.

*County seat:* Auburn.

*References:* State Mineralogist Report XV: XVII: XVIII: XIX: XX: XXIII (July, 1927).

Placer County in thirtieth place, with eleven mineral substances, had a commercial production for 1933 as follows, compared with \$240,248 for the previous year:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery) -----	40,658 tons	\$59,261
Gold -----		167,774
Silver -----	1,357 fine oz.	475
Stone, miscellaneous -----		41,761
Other minerals * -----		24,595
Total value -----		\$293,866

\* Includes brick, chromite, copper, granite, lead, mineral water.

**PLUMAS**

*Land area:* 2594 square miles.

*Population:* 7909 (1930 census).

*Location:* Northeastern border of state, south of Lassen County.

*County seat:* Quincy.

*References:* State Mineralogist Report XVI: XVII: XVIII: XIX: XX: XXIV (Oct., 1928).

Plumas County's mineral output for 1933 with eight different mineral substances was valued at \$131,150, as compared with \$181,312 for 1932.

In forty-third place, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	-----	\$70,000
Silver -----	1,149 fine ozs.	402
Stone, miscellaneous -----	-----	51,125
Other minerals * -----	-----	9,623
Total value -----		\$131,150

\* Includes barytes, copper, granite, lead.

**RIVERSIDE**

*Land area:* 7240 square miles.

*Population:* 82,078 (1930 census).

*Location:* Southern portion of state.

*County seat:* Riverside.

*References:* State Mineralogist Report XV: XVII: XVIII: XX: XXV (Oct., 1929).

Riverside is the fourth county in the state in size and the eleventh in regard to the total value of mineral output for 1933. Within its borders are included mountain, desert, and agricultural land. In point of variety Riverside County showed thirteen different minerals commercially produced in 1933. The increase in the 1933 output over that of 1932, which was valued at \$1,681,855, was due mainly to cement.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Clay (pottery) -----	18,228 tons	\$32,965
Copper -----	663 lbs.	42
Gold -----	-----	14,993
Silver -----	300 fine oz.	105
Stone, miscellaneous -----	-----	237,827
Other minerals * -----	-----	1,932,806
Total value -----		\$2,218,738

\* Includes brick and hollow building tile, cement, gems (Iceland spar), gypsum, lead, mineral water, silica (glass sand).

**SACRAMENTO**

*Land area:* 983 square miles.

*Population:* 141,915 (1930 census).

*Location:* North-central portion of State.

*County seat:* Sacramento.

*References:* State Mineralogist Report XV: XVII: XVIII: XX: XXI (Jan., 1925).

Sacramento stands tenth among the counties of the State as a mineral producer, the output, principally gold, for 1933 being valued at

\$3,172,763, as compared with the 1932 production worth \$2,339,923. In regard to gold output alone, this country ranks second, being exceeded only by Nevada, the Sacramento product coming from the dredges. With nine mineral substances, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Brick and hollow building tile-----	----	\$75,081
Gold -----	----	2,996,669
Silver -----	5,052 fine oz.	1,768
Stone, miscellaneous-----	----	82,602
Other minerals *-----	----	16,643
Total value-----		\$3,172,763

\* Includes copper, lead, natural gas, platinum.

### SAN BENITO

*Land area:* 1392 square miles.

*Population:* 11,310 (1930 census).

*Location:* West-central portion of state.

*County seat:* Hollister.

*References:* State Mineralogist Report XV: XVII: XVIII: XX: XXII (April, 1926).

San Benito County ranks thirty-third among the counties in regard to value of total mineral production for 1933, having an output worth \$247,479, as compared with \$199,924 for the previous year.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Quicksilver -----	711 flasks	\$38,765
Unapportioned-----	----	208,714
Total value-----		\$247,479

### SAN BERNARDINO

*Land area:* 20,157 square miles.

*Population:* 133,827 (1930 census).

*Location:* Southeastern portion of state.

*County seat:* San Bernardino.

*References:* State Mineralogist Report XV: XVII: XVIII: XIX: XXVI (July, 1930): XXVII (July, 1931).

San Bernardino, by far the largest county in the State in area, ranks sixth as regards to the value of mineral output for 1933, with a total of \$8,975,485, as compared with the 1932 total of \$6,043,335.

San Bernardino for several years (except 1918) has led all other counties in the State in point of variety of minerals, producing commercially during 1933 a total of 24 different substances.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Barytes -----	275 tons	\$2,515
Bentonite -----	1,678 tons	16,042
Clay (pottery)-----	786 tons	5,687
Copper -----	7,871 lbs.	504
Gold -----	----	116,074
Lead -----	27,936 lbs.	1,034
Silver -----	96,619 fine oz.	33,817
Talc -----	8,531 tons	85,262
Stone, miscellaneous-----	----	145,154
Other minerals *-----	----	8,569,396
Total value-----		\$8,975,485

\* Includes borates, brick, calcium chloride, cement, fluorspar, lime, limestone, mineral water, petroleum, potash, volcanic ash, salt, soda, tungsten.

## SAN DIEGO

*Land area:* 4221 square miles.

*Population:* 209,477 (1930 census).

*Location:* Extreme southwest corner of state.

*County seat:* San Diego.

*References:* State Mineralogist Report XIV: XVII: XVIII: XIX: XX: XXI (July, 1925).

San Diego County ranks twenty-third in the total value of its mineral output for the year with fourteen different minerals on the commercial list. The value for 1933 was \$620,881 as compared with the 1932 output worth \$375,176, the increase being due mainly to miscellaneous stone.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	----	\$5,894
Granite -----	----	10,097
Silver -----	68 fine oz.	24
Stone, miscellaneous -----	----	374,796
Other minerals * -----	----	230,070
Total value -----		\$620,881

\* Includes brick and hollow building tile, bromine, clay (pottery), feldspar, grinding-mill pebbles, magnesium chloride, mineral water, salt, silica (quartz)

## SAN FRANCISCO

*Land area:* 46½ square miles.

*Population:* 637,212 (1930 census).

*County seat:* San Francisco.

*References:* State Mineralogist Report XVII: XVIII: XX: XXV (April, 1929).

Surprising as it may appear at first glance, San Francisco County is listed among the mineral producing sections of the State, actual production consisting mainly of crushed rock, sand, gravel and mineral water.

In fifty-seventh place, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Value</i>
Unapportioned * -----	\$7,734

\* Includes mineral water and miscellaneous stone.

## SAN JOAQUIN

*Land area:* 1448 square miles.

*Population:* 102,871 (1930 census).

*Location:* Central portion of state.

*County seat:* Stockton.

*References:* State Mineralogist Report XIV: XVII: XVIII: XXI (April, 1925).

San Joaquin County reported a mineral production for 1933, having a total value of \$153,127, as compared with \$270,492 for 1932. In fortieth place commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----	----	\$1,017
Silver -----	4 fine oz.	1
Stone, miscellaneous -----	----	49,913
Other minerals * -----	----	102,196
Total value -----		\$153,127

\* Includes brick and hollow building tile, and natural gas.

## SAN LUIS OBISPO

*Land area:* 3334 square miles.

*Population:* 29,617 (1930).

*Location:* Bordered by Kern County on the east and the Pacific Ocean on the west.

*County seat:* San Luis Obispo.

*References:* State Mineralogist Report XV: XVII: XVIII: XXI (Oct., 1925).

The total value of the mineral production of San Luis Obispo County in 1933 was \$55,914, as compared with the 1932 output worth \$249,930. In forty-seventh place, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold -----		\$759
Quicksilver -----	285 flasks	15,759
Other minerals * -----		39,396
Total value -----		\$55,914

\* Includes brick, chromite, mineral water, petroleum, volcanic ash, miscellaneous stone.

## SAN MATEO

*Land area:* 447 square miles.

*Population:* 77,338 (1930 census).

*Location:* Peninsula, adjoined by San Francisco on the north.

*County seat:* Redwood City.

*References:* State Mineralogist Report XVII: XVIII: XXV (April, 1929).

San Mateo County had a mineral output in 1933 of eight mineral substances with a total value of \$1,569,480, as compared with the 1932 production worth \$1,343,450.

In fourteenth place commercial production for 1933 was as follows:

<i>Substance</i>	<i>Value</i>
Stone, miscellaneous -----	\$75,752
Other minerals * -----	1,493,728
Total value -----	<u>\$1,569,480</u>

\* Includes cement, limestone (shells), magnesium carbonate, natural gas, petroleum, salt.

## SANTA BARBARA

*Land area:* 2740 square miles.

*Population:* 65,075 (1930 census).

*Location:* Southwestern portion of State, adjoining San Luis Obispo on the south.

*County seat:* Santa Barbara.

*References:* State Mineralogist Report XV: XVII: XVIII: XIX: XXI (Oct., 1925).

Santa Barbara County owes its position of seventh in the State in regard to its mineral output to the presence of productive oil fields within its boundaries. The total value of its mineral production during the year 1933 was \$7,011,773, as compared with the 1932 output of \$7,583,197.

With eleven different substances, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper-----	27,998 lbs.	\$1,792
Gold-----	-----	27
Natural gas-----	3,471,759 M cu. ft.	184,609
Petroleum-----	6,395,679 bbls.	5,999,786
Silver-----	20 fine oz.	7
Stone miscellaneous-----	-----	38,019
Other minerals *-----	-----	787,533
Total value -----		\$7,011,773

\* Includes bituminous rock, diatomite, marble, mineral water, quicksilver.

### SANTA CLARA

*Land area:* 1328 square miles.

*Population:* 144,921 (1930 census).

*Location:* West-central portion of state.

*County seat:* San José.

*References:* State Mineralogist Report XVII: XVIII: XX: XXVI (Jan., 1930).

Santa Clara County reported a mineral output for 1933 of \$534,378 as compared with the 1932 figures of \$321,627.

In twenty-fifth place with eight mineral substances, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Brick-----	6,395 M.	\$46,384
Limestone-----	30,646 tons	71,557
Stone, miscellaneous-----	-----	361,802
Other minerals *-----	-----	54,635
Total value -----		\$534,378

\* Includes clay (pottery), magnesite, petroleum, quicksilver.

### SANTA CRUZ

*Land area:* 435 square miles.

*Population:* 37,405 (1930 census).

*Location:* Bordering Pacific Ocean, just south of San Mateo County.

*County seat:* Santa Cruz.

*References:* State Mineralogist Report XVII: XVIII: XXII (Jan., 1926).

The mineral output of Santa Cruz County, a portion of which is itemized below, amounted to a total of \$1,234,180, gives the county a standing of fifteenth among all others in the State in this regard. This was an increase over the 1932 figures of \$1,047,766.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$307
Limestone-----	6,413 tons	22,587
Silver-----	3 fine oz.	1
Stone, miscellaneous-----	-----	14,120
Other minerals *-----	-----	1,197,165
Total value -----		\$1,234,180

\* Includes bituminous rock, cement, lime.

## SHASTA

*Land area:* 3858 square miles.

*Population:* 13,925 (1930 census).

*Location:* North-central portion of state.

*County seat:* Redding.

*References:* State Mineralogist Report XIV : XVII : XVIII : XIX : XXII (April, 1926), XXIX (Jan., April, 1933).

Shasta County stood eighteenth in California among the mineral producing counties for 1933, with an output valued at \$1,113,395, as compared with the 1932 production worth \$610,956.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper-----	885,108 lbs.	\$54,727
Gold-----	-----	618,290
Lead-----	14,883 lbs.	551
Silver-----	19,554 fine oz.	6,884
Miscellaneous stone-----	-----	233,110
Other minerals *-----	-----	199,873
Total value -----		\$1,113,395

\* Includes platinum and pyrite.

## SIERRA

*Land area:* 923 square miles.

*Population:* 2419 (1930 census).

*Location:* Eastern border of state just north of Nevada County.

*County seat:* Downieville.

*References:* State Mineralogist Report XVI : XVII : XVIII : XX : XXV (April, 1929).

Sierra County reported a mineral production of \$449,146, which was mainly gold, during the year 1933, as compared with the 1932 output, which was worth \$607,872.

In twenty-sixth place, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Copper-----	599 lbs.	\$38
Gold-----	-----	445,102
Silver-----	3,352 fine oz.	1,173
Miscellaneous stone-----	-----	2,833
Total value -----		\$449,146

## SISKIYOU

*Land area:* 6256 square miles.

*Population:* 25,505 (1930 census).

*Location:* Extreme north-central portion of state, next to Oregon boundary.

*County seat:* Yreka.

*References:* State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXI (Oct., 1925) : XXVIII (Jan., 1931).

Siskiyou, fifth county in California in regard to size, located in a highly mineralized and mountainous country, ranks twenty-eighth in regard to the value of its mineral output for 1933. The 1932 production was valued at \$184,019.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----		\$324,954
Silver-----	1,959 fine oz.	686
Stone, miscellaneous-----	----	29,036
Other minerals *-----	----	19,502
Total value -----		\$374,178

\* Includes copper, lead, mineral water, pumice.

*Photo by Walter W. Bradley.*

### SOLANO

*Land area:* 822 square miles.

*Population:* 40,807 (1930 census).

*Location:* Touching San Francisco Bay on the northeast.

*County seat:* Fairfield.

*References:* State Mineralogist Report XIV: XVII: XVIII: XXIII (April, 1927).

Solano, while mostly valley land, produced mineral substances during the year 1933 to the total value of \$16,996, ranking it fifty-first among the counties of the State, compared with the 1932 output worth \$36,202.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Value</i>
Unapportioned * -----	\$16,996

\* Includes onyx, travertine, miscellaneous stone.

## SONOMA

*Land area:* 1577 square miles.

*Population:* 62,248 (1930 census).

*Location:* South of Mendocino County, bordering on the Pacific Ocean.

*County seat:* Santa Rosa.

*References:* State Mineralogist Report XIV : XVII : XVIII : XXII (July, 1926).

Sonoma County ranks thirty-ninth among the counties of California, during 1933, with a mineral output valued at \$157,988, as compared with the 1932 production worth \$167,849.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Mineral water-----	23,016 gal.	\$2,390
Stone, miscellaneous-----	----	147,266
Other minerals *-----	----	8,332
Total value -----		\$157,988

\* Includes granite and quicksilver.

## STANISLAUS

*Land area:* 1450 square miles.

*Population:* 56,624 (1930 census).

*Location:* Center of State, bounded on south by Merced County.

*County seat:* Modesto.

*References:* State Mineralogist Report XIV : XVII : XVIII : XXI (April, 1925).

Gold has usually been the chief mineral product of Stanislaus County, but it was exceeded in 1918-1919 by manganese, and in 1921-1923 and 1925-1930 by miscellaneous stone. This county for 1933 ranked thirtieth in the State in regard to minerals, with an output valued at \$298,847, as compared with \$333,482 in 1932.

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	----	\$148,204
Silver-----	689 fine oz.	241
Stone, miscellaneous-----	----	40,888
Other minerals *-----	----	109,514
Total value -----		\$298,847

\* Includes clay (pottery), diatomite, lead, magnesite.

## SUTTER

*Land area:* 608 square miles.

*Population:* 14,618 (1930 census).

*Location:* Bounded by Butte County on the north and Sacramento on the south.

*County seat:* Yuba City.

*References:* State Mineralogist Report XV : XVII : XVIII.

Sutter is one of only two counties in the State which for a number of years reported no commercial output of some kind of mineral substance. In 1917 some crushed rock was taken out, from the Marysville Buttes also in 1925-1928.

There has been some utilization of natural gas. Both clay and coal exist here, but deposits of neither mineral have been placed on a productive basis. During 1933, there was a mineral output, which was valued at \$11,900.

### TEHAMA

*Land area:* 2893 square miles.

*Population:* 13,839 (1930 census).

*Location:* North-central portion of the State, bounded on the north by Shasta.

*County seat:* Red Bluff.

*References:* State Mineralogist Report XV : XVII : XVIII : XIX : XXIV (July, 1928).

Tehama County stands forty-ninth among the mineral producing counties of the State for 1933, with an output valued at \$30,334, as compared with the 1932 yield worth \$14,387.

Commercial production, for 1933 was as follows:

<i>Substance</i>	<i>Value</i>
Miscellaneous stone -----	\$30,309
Unapportioned -----	25
Total value -----	\$30,334

### TRINITY

*Land area:* 3166 square miles.

*Population:* 2811 (1930 census).

*Location:* Northwestern portion of State.

*County seat:* Weaverville.

*References:* State Mineralogist Report XIV : XVII : XVIII : XIX : XX : XXII (Jan., 1926), XXIX (Jan., April, 1933).

Trinity County's 1933 output of minerals was valued at \$359,503, as compared with the 1932 figures of \$325,275, mainly due to gold which gives this county the rank of twenty-ninth for the year.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$345,851
Silver-----	2,194 fine oz.	768
Stone, miscellaneous-----	-----	2,375
Other minerals *-----	-----	10,509
Total value -----	-----	\$359,503

\* Includes coal, lead, platinum, quicksilver.

### TULARE

*Land area:* 4856 square miles.

*Population:* 77,375 (1930 census).

*Location:* Bounded by Inyo on the east, Kern on the south, Fresno on the north.

*County seat:* Visalia.

*References:* State Mineralogist Report XV : XVII : XVIII : XX.

Tulare County stands thirty-sixth on the list of mineral-producing counties for 1933, with eight different substances, having a total value of \$178,613, as compared with the 1932 figure of \$116,074.

Redding Creek Hydraulic Mine, Douglas City, Trinity County.

*Cut by Courtesy of California State Chamber of Commerce.*

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$2,152
Silver-----	40 fine oz.	14
Stone, miscellaneous-----	-----	136,859
Other minerals *-----	-----	39,588
Total value -----	-----	\$178,613

\* Includes brick, granite, petroleum, tungsten.

### TUOLUMNE

*Land area:* 2190 square miles.

*Population:* 9239 (1930 census).

*Location:* East-central portion of State—Mother Lode District.

*County seat:* Sonora.

*References:* State Mineralogist Report XIV: XVII: XVIII: XIX: XX: XXIV (Jan., 1928).

Tuolumne County ranks thirty-second among the counties of the State relative to its total value of mineral output for 1933 with nine different substances. This county ranks first as a producer of marble in the State. The mineral production for 1933 was valued at \$264,979, as compared with \$300,458 for 1932.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$107,736
Silver-----	800 fine oz.	280
Stone, miscellaneous-----	-----	11,020
Other minerals *-----	-----	145,943
Total value -----	-----	\$264,979

\* Includes chromite, lead, lime, limestone, marble, slate.

### VENTURA

*Land area:* 1878 square miles.

*Population:* 54,577 (1930 census).

*Location:* Southwestern portion of State, bordering on Pacific Ocean.

*County seat:* Ventura.

*References:* State Mineralogist Report XV: XVII: XVIII: XX: XXI: XXVIII (July-Oct., 1932).

Ventura is fifth county in the State in respect to the value of its mineral output for 1933. The 1933 mineral production was worth \$14,558,096, as compared with the 1932 output worth \$14,855,606.

With eleven different mineral substances, commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$1,193
Lead-----	1,631 lbs.	64
Natural gas-----	39,539,382 M cu. ft.	1,957,634
Petroleum-----	14,793,286 bbls.	12,398,253
Silver-----	54 fine oz.	19
Stone, miscellaneous-----	-----	164,999
Other minerals *-----	-----	35,534
Total value -----	-----	\$14,558,096

\* Includes brick, clay (pottery), granite, limestone (marl).

## YOLO

*Land area:* 1017 square miles.

*Population:* 23,618 (1930 census).

*Location:* Sacramento Valley, bounded by Sutter on the east and Colusa on the north.

*County seat:* Woodland.

*References:* State Mineralogist Report XIV: XVII: XVIII.

Yolo County in fifty-second place had a commercial production for 1933 as follows, compared with \$21,625 for the preceding year:

<i>Substance</i>	<i>Value</i>
Gold -----	\$129
Miscellaneous stone -----	16,694
Total value -----	<u>\$16,823</u>

## YUBA

*Land area:* 639 square miles.

*Population:* 11,327 (1930 census).

*Location:* Lies west of Sierra and Nevada counties; south of Plumas.

*County seat:* Marysville.

*References:* State Mineralogist Report XV: XVII: XVIII: XX: XXVI (July, 1930).

Yuba County ranks seventeenth among the counties of the State as a mineral producer and fourth in respect to gold, which is obtained mainly by dredgers. The 1932 output was valued at \$989,149.

Commercial production for 1933 was as follows:

<i>Substance</i>	<i>Amount</i>	<i>Value</i>
Gold-----	-----	\$1,117,844
Silver-----	3,369 fine oz.	1,179
Stone, miscellaneous-----	-----	31,930
Unapportioned -----	-----	9
Total value -----		<hr/> \$1,150,962

<i>Inyo County</i> Natural Soda Products Co.----- Pacific Alkali Co.-----	----- ----- -----	650 S. Spring St., Los Angeles----- 1206 Pacific Mutual Bldg., Los Angeles-----	Keeler Bartlett
<i>San Bernardino County</i> West End Chemical Co.-----	-----	706 Syndicate Bldg., Oakland-----	West End

SULPHUR

Operator	Product	Address	Location of mine
<i>Alpine County</i> Leviathan Sulphur Co., H. Kenyon Burch, Pres.---	-----	1010 Richfield Bldg., Los Angeles-----	Markleeville
<i>Inyo County</i> Crater Sulphur Deposit, Morris Albertali-----	-----	Big Pine -----	Last Chance Mountain

## STONE, MISCELLANEOUS

Under the heading of stone, miscellaneous, there are four divisions—crushed rock, grinding mill pebbles, paving blocks, and sand and gravel. Crushed rock includes all crushed rock that is used in macadam, ballast and for concrete; also rock used for rubble and riprap.

NOTE.—The California State Highway Commission produces both crushed rock and sand and gravel in various places in the State used in construction and maintenance of highways, but not specified in this listing.

Operator	Product	Address	Location of pit or quarry

## APPENDIX

## MINING BUREAU ACT

Chap. 679 [Stats. 1913]; amended, Chap. 280 [Stats. 1929]; amended, Chap. 748 [Stats. 1933].

An act establishing a state mining bureau, creating the office of state mineralogist, fixing his salary and prescribing his powers and duties; providing for the employment of officers and employees of said bureau, making it the duty of persons in charge of mines, mining operations and quarries to make certain reports, providing for the investigation of mining operations, dealings and transactions and the prosecution for defrauding, swindling and cheating therein, creating a state mining bureau fund for the purpose of carrying out the provisions of this act and repealing an act entitled "An act to provide for the establishment, maintenance, and support of a bureau, to be known as the state mining bureau, and for the appointment and duties of a board of trustees, to be known as the board of trustees of the state mining bureau, who shall have the direction, management and control of said state mining bureau, and to provide for the appointment, duties, and compensation of a state mineralogist, who shall perform the duties of his office under the control, direction and supervision of the board of trustees of the state mining bureau," approved March 23, 1893, and all acts amendatory thereof and supplemental thereto or in conflict herewith.

[Approved June 16, 1913. In effect August 10, 1913.]

[Amendment (Sec. 16) approved May 14, 1929. In effect August 14, 1929.]

[Amendment (Sec. 10) approved June 5, 1933. In effect August 21, 1933.]

*The people of the State of California do enact as follows:*

SECTION 1. There is hereby created and established a state mining bureau. The chief officer of such bureau shall be the state mineralogist, which office is hereby created.

SEC. 2. It shall be the duty of the governor of the State of California and he is hereby empowered to appoint a citizen and resident of this state, having a practical and scientific knowledge of mining, to the office of state mineralogist. Said state mineralogist shall hold his office at the pleasure of the governor. He shall be a civil executive officer. He shall take and subscribe the same oath of office as other state officers. He shall receive for his services a salary of three hundred dollars (\$300) per month, to be paid at the same time and in the same manner as the salaries of other state officers. He shall also receive his necessary traveling expenses when traveling on the business of his office. He shall give bond for the faithful performance of his duties in the sum of ten thousand dollars (\$10,000), said bond to be approved by the governor of the state of California.

SEC. 3. Said state mineralogist shall employ competent geologists, field assistants, qualified specialists and office employees when necessary in the execution of his plans and operations of the bureau, and fix their compensation. The said employees shall be allowed their necessary traveling expenses when traveling on the business of said department and shall hold office at the pleasure of said state mineralogist.

SEC. 4. It shall be the duty of said state mineralogist to make, facilitate, and encourage, special studies of the mineral resources and mineral industries of the state. It shall be his duty: to collect statistics concerning the occurrence and production of the economically important minerals and the methods pursued in making their valuable constituents available for commercial use; to make a collection of typical geological and mineralogical specimens, especially those of economic and commercial importance, such collection constituting the museum of the state mining bureau; to provide a library of books, reports, drawings, bearing upon the mineral industries, and sciences of mineralogy and geology, and arts of mining and metallurgy, such library constituting the library of the state mining bureau; to make a collection of models, drawings and descriptions of the mechanical appliances used in mining and metallurgical processes; to preserve and so maintain such collections and library as to make them available for reference and examination, and open to

public inspection at reasonable hours; to maintain, in effect, a bureau of information concerning the mineral industries of this state, to consist of such collections and library, and to arrange, classify, catalogue, and index the data therein contained, in a manner to make the information available to those desiring it; to issue from time to time such bulletins as he may deem advisable concerning the statistics and technology of the mineral industries of this state.

SEC. 5. It is hereby made the duty of the owner, lessor, lessee, agent, manager or other person in charge of each and every mine, of whatever kind or character, within the state, to forward to the state mineralogist, upon his request, at his office not later than the thirty-first day of March, in each year, a detailed report upon forms which will be furnished showing the character of the mine, the number of men then employed, the method of working such mine and the general condition thereof, the total mineral production for the past year, and such owner, lessor, lessee, agent, manager or other person in charge of any mine within the state must furnish whatever information relative to such mine as the state mineralogist may from time to time require for the proper discharge of his official duties. Any owner, lessor, lessee, agent, manager or other person in charge of each and every mine of whatever kind or character within the state, who fails to comply with the above provisions shall be deemed guilty of a misdemeanor.\*

SEC. 6. The state mineralogist now performing the duties of the office of state mineralogist shall perform the duties of the office of state mineralogist as in this act provided until the appointment and qualification of his successor as in this act provided.

SEC. 7. The said state mineralogist shall take possession, charge and control of the offices now occupied and used by the board of trustees and state mineralogist and the museum, library and laboratory of the mining bureau located in San Francisco as provided for by a certain act of the legislature approved March 23, 1893, and hereafter referred to in section fourteen hereof, and shall maintain such offices, museum, library and laboratory for the purposes provided in this act.

SEC. 8. Said state mineralogist or qualified assistant shall have full power and authority at any time to enter or examine any and all mines, quarries, wells, mills, reduction works, refining works and other mineral properties or working plants in this state in order to gather data to comply with the provisions of this act.

SEC. 9. The state mineralogist shall make a biennial report to the governor on or before the fifteenth day of September next preceding the regular session of the legislature.

SEC. 10. All moneys received by the State Mining Bureau (or State Division of Mines) or any officer thereof, from sales of publications issued by said bureau, shall be deposited at least once each month in the State treasury to the credit of a fund which is hereby created and designated "Division of mines revolving printing fund." Said fund shall be used and is hereby appropriated for the use of said bureau in addition to such other funds as may be from time to time appropriated by the Legislature, for the printing and publishing of reports, bulletins, and maps issued by the said bureau. The State Controller is authorized to require financial reports from the State Mining Bureau or any officer thereof.

SEC. 11. The said state mineralogist is hereby authorized and empowered to receive on behalf of this state, for the use and benefit of the state mining bureau, gifts, bequests, devises and legacies of real or other property and to use the same in accordance with the wishes of the donors, and if no instructions are given by said donors, to manage, use, and dispose of the gifts and bequests and legacies for the best interests of said state mining bureau and in such manner as he may deem proper.

SEC. 12. The state mineralogist may, whenever he deems it advisable, prepare a special collection of ores and minerals of California to be sent to or used at any world's fair or exposition in order to display the mineral wealth of the state.

SEC. 13. The state mineralogist is hereby empowered to fix a price upon and to dispose of to the public, at such price, any and all publications of the state mining bureau, including reports, bulletins, maps, registers or other publications, such price shall approximate the cost of publication and distribution. Any and all sums derived from such disposition, or from gifts or bequests made, as hereinbefore provided must be accounted for by said state mineralogist and turned over to the state treasurer to be credited to the mining bureau fund as provided for in section

---

\* Sec. 19 of the Penal Code of California provides: "Except in cases where a different punishment is prescribed by this code, every offense declared to be a misdemeanor is punishable by imprisonment in a county jail not exceeding six months, or by a fine not exceeding five hundred dollars, or by both."

ten. He is also empowered to furnish without cost to public libraries the publications of the bureau and to exchange publications with other geological surveys and scientific societies, etc.

SEC. 14. The state mineralogist provided for by this act shall be the successor in interest of the board of trustees of the state mining bureau, and the state mineralogist, under and by virtue of that certain act, entitled "An act to provide for the establishment, maintenance, and support of a bureau, to be known as the state mining bureau, and for the appointment and duties of a board of trustees, to be known as the board of trustees of the state mining bureau, who shall have the direction, management, and control of said state mining bureau, and to provide for the appointment, duties, and compensation of a state mineralogist, who shall perform the duties of his office under the control, direction and supervision of the board of trustees of the state mining bureau," approved March 23, 1893, and all books, papers, documents, personal property, records, and property of every kind and description obtained or possessed, or held or controlled by the said board of trustees of the said state mining bureau, and the state mineralogist, and the clerks and employees thereof, under the provisions of said act of March 23, 1893, or any act supplemental thereto or amendatory thereof, shall immediately be turned over and delivered to the said state mineralogist herein provided for, who shall have charge and control thereof.

SEC. 15. That certain act entitled "An act to provide for the establishment, maintenance, and support of a bureau, to be known as the state mining bureau, and for the appointment and duties of a board of trustees, to be known as the board of trustees of the state mining bureau, and to provide for the appointment, duties and compensation of a state mineralogist, who shall perform the duties of his office under the control, direction, and supervision of the board of trustees of the state mining bureau," approved March 23, 1893, together with all acts amendatory thereof and supplemental thereto and all acts in conflict herewith are hereby repealed.

SEC. 16. For the purpose of this act and as used herein the term "mine" is hereby defined to embrace and include all mineral bearing properties of whatever kind or character whether underground, quarry, pit, well, spring or other source from which any mineral substance is or may be obtained, and the term "mineral" for the purposes of this act and whenever so used shall embrace and include any and all mineral products both metallic and nonmetallic, solid, liquid or gaseous, and mineral waters of whatever kind or character.

## DEPARTMENT OF NATURAL RESOURCES ACT

Chap. 128 [Stats. 1927]; amended, Chap. 307 [Stats. 1929.]

An act to add a new article to chapter three of title one of part three of the Political Code to be numbered article two j, embracing sections three hundred seventy-three to three hundred seventy-three i, relating to a department of natural resources.

[Approved by the Governor April 13, 1927.]

[Amendment approved May 18, 1929.]

*The people of the State of California do enact as follows:*

SECTION 1. The Political Code is hereby amended by adding a new article to chapter III of title I of part III thereof, to be numbered article IIj, embracing sections 373 to 373i and to read as follows:

## ARTICLE IIj.

## DEPARTMENT OF NATURAL RESOURCES.

373. A department of the government of the State of California to be known as the department of natural resources is hereby created. The department shall be conducted under the control of an executive officer to be known as the director of natural resources, which office is hereby created. The director shall be appointed by and hold office at the pleasure of the governor and shall receive a salary of six thousand dollars per annum.

Except as in this article otherwise provided, the provisions of article II of this chapter, title, and part of the Political Code as adopted at the forty-fourth session of the Legislature and as the same may be amended from time to time, shall govern and apply to the conduct of the department of natural resources in every respect the same as if such provisions were herein set forth at length and wherever in said article II the term "head of the department" or similar designation occurs, the same shall for the purposes of this article mean the director of natural resources.

373a. For purposes of administration the department shall be forthwith organized by the director thereof, subject to the approval of the governor, in such manner as he shall deem necessary to properly segregate and conduct the work of the department, and the director shall have power to appoint, in accordance with the civil service and other provisions of law, such deputies, officers and other expert and clerical assistants as may be necessary. The work of the department is hereby divided into at least four divisions to be known as the division of forestry, the division of parks, the division of fish and game, and the division of mines.

373b. The division of mines shall be administered through a chief who shall be appointed by the director of natural resources upon the nomination of the state mining board, the chief to be a technically trained mining engineer and to be known as the state mineralogist; such chief shall receive a salary of six thousand dollars per annum. General policies for the guidance of the division of mines shall be determined by a board to be known as the state mining board, which shall consist of five members appointed by and to hold office at the pleasure of the governor.

373c. The division of forestry shall be administered through a chief of division who shall be known as the state forester, who shall be a technically trained forester, appointed by the director of natural resources upon nomination by the state board of forestry hereinafter provided. General policies for the guidance of the division of forestry shall be determined by a state board of forestry which shall consist of seven members appointed by and holding office at the pleasure of the governor. Of the seven members one shall be familiar with the pine timber industry, one with the redwood industry, one with the live stock industry, one with general agriculture and one with the problems of water conservation.

373d. The division of parks shall be administered through a chief of division who shall be appointed by the director of natural resources upon nomination by the state park commission hereinafter provided. General policies for the administration of the state park system shall be determined by the state park commission

which is hereby created to consist of five members appointed by the governor and holding office at his pleasure.

373e. The division of fish and game shall be administered through a fish and game commission consisting of three members appointed by and holding office at the pleasure of the governor.

373f. The chiefs of the divisions of forestry and parks respectively shall receive such salaries as may be determined by the director with the approval of the governor. The director of natural resources and the chief of each division before entering upon his duties shall execute to the State of California an official bond in the penal sum of twenty-five thousand dollars conditioned upon the faithful performance of his duties. The members of the board of forestry, the state parks commission and fish and game commission shall serve without compensation, but shall be entitled to their actual expenses incurred in the performance of their duties.

373g. The department of natural resources shall succeed to and is hereby invested with all the duties, powers, purposes, responsibilities and jurisdiction of the state mining bureau, state mineralogist, department of petroleum and gas, state oil and gas supervisor, state forester, state board of forestry, California redwood park commission, San Pasqual battlefield commission, Mount Diablo park commission, state fish and game commission, state fish and game commissioners, and, except as herein otherwise provided, of the several officers, deputies and employees of such bodies and offices, and whenever by the provisions of any statute or law now in force or that may hereafter be enacted a duty or jurisdiction is imposed or authority conferred upon any of said officers, offices, bodies, deputies or employees by any statute the enforcement of which is transferred to the department, such duty, jurisdiction and authority are hereby imposed upon and transferred to the department of natural resources and the appropriate officers thereof with the same force and effect as though the title of said department of natural resources had been specifically set forth and named therein in lieu of the name of any such body, office, officer, deputy or employee. Said bodies and offices, the duties, powers, purposes, responsibilities and jurisdiction of which are so transferred and vested in the department of natural resources, and the positions of all officers, deputies and employees thereunder, are and each of them is hereby abolished and shall have no further legal existence, but the statutes and laws under which they existed and all laws prescribing their duties, powers, purposes, responsibilities and jurisdiction, together with all lawful rules and regulations established thereunder are hereby expressly continued in force.

The department of natural resources shall be in possession and control of all records, books, papers, offices, equipment, supplies, moneys, funds, appropriations, land and other property real or personal now or hereafter held for the benefit or use of said bodies, offices and officers.

The boards of district oil and gas commissioners, the offices of district oil and gas commissioners and the board of review, correction and equalization created by the act approved June 10, 1915, establishing the department of petroleum and gas, are hereby respectively continued in force with the powers, duties, responsibilities and jurisdiction in them vested by the provisions of said act approved June 10, 1915, as amended; *provided*, that said board of review shall consist of the director of natural resources, the director of finance and the chairman of the state board of equalization.

373h. The management and control of the property acquired by the State of California under or pursuant to the provisions of the act entitled "An act to accept the gift to the state of San Pasqual battlefield in San Diego county, to provide for collecting and systematizing the history of said battle, for determining the exact location thereof, and to report a suitable method of marking said battlefield and commemorating the heroism of those Americans who fought and died there," approved May 11, 1919, is hereby transferred to and vested in the department of natural resources.

373i. From and after the date upon which this act takes effect, the department of natural resources shall be and is hereby authorized and empowered to expend the moneys in any appropriation or in any special fund in the state treasury now remaining or made available by law for the administration of the provisions of all the statutes the administration of which is committed to the department, or for the use, support, or maintenance of any board, bureau, commission, department, office or officer whose duties, powers, and functions are, by the provisions of this article, transferred to and conferred upon the department of natural resources. Such expenditures by the department shall be made in accordance with law in carrying out the purposes for which such appropriations were made or such special funds created.

## PUBLICATIONS OF THE DIVISION OF MINES

---

During the past fifty-four years, in carrying out the provisions of the organic act creating the former California State Mining Bureau, there have been published many reports, bulletins and maps which go to make up a library of detailed information on the mineral industry of the State, a large part of which could not be duplicated from any other source.

One feature that has added to the popularity of the publications is that many of them have been distributed without cost to the public, and even the more elaborate ones have been sold at a price which barely covers the cost of printing.

Owing to the fact that funds for the advancing of the work of this department have usually been limited, the reports and bulletins mentioned are printed in limited editions many of which are now entirely exhausted.

Copies of such publications are available, however, in the offices of the Division of Mines, in the Ferry Building, San Francisco; State Building, Los Angeles; State Office Building, Sacramento; Redding; and Division of Oil and Gas at Santa Barbara, Santa Paula, Coalinga, Taft, Bakersfield. They may also be found in many public, private and technical libraries in California and other States and foreign countries.

A catalog of all publications from 1880 to 1917, giving a synopsis of their contents, is issued as Bulletin No. 77.

Publications in stock may be obtained by addressing any of the above offices and enclosing the requisite amount in the case of publications that have a list price. Only coin, stamps or money orders should be sent, and it will be appreciated if remittance is made in this manner rather than by personal check.

Money orders should be made payable to the Division of Mines.

**NOTE.**—The Division of Mines frequently receives requests for some of the early Reports and Bulletins now out of print, and it will be appreciated if parties having such publications and wishing to dispose of them will advise this office.

### DETERMINATION OF MINERAL SAMPLES

---

Samples (limited to one at one time) of any mineral found in the State may be sent to the Division of Mines for identification, and the same will be classified free of charge. No samples will be determined if received from points outside the State. It must be understood that no assays, or quantitative determinations will be made. Samples should be in lump form if possible, and marked plainly with name of sender on outside of package, etc. No samples will be received unless delivery charges are prepaid. A letter should accompany sample, giving locality where mineral was found and the nature of the information desired.
